What the people say!

"I have a recurring problem, my Dad is always playing EXTERMINATOR when I want to"
Craig Horsfield - Blackburn.

"Thank you for a game with no loading or playing problems, my son is very pleased with it"
- Mrs Pritchard, Llanfairpwll.

"I would like to congratulate you on your excellent game for the Commodore 64 -
HUSTLER. I found this game very entertaining with brilliant sound and graphics" -
Stuart Adair, Runcorn.

"After purchasing my Commodore 64, I proceeded to purchase many software games for
both me and my children. The 'Commodore' and the 'bleep' I find are very poor compared
to yours. Can you please send me a brochure or a list or - better still - can you send me a
few and enclose the bill." *H. Stephenson, Sheffield.*

"I have just purchased the Bubble Bus game EXTERMINATOR. I would like to congratulate
you on a brilliant game. The sprite graphics are really good, non flicker - and smooth! Also the
use of colour and sound is great." *Alan Shepherd.*

"May I say I think HUSTLER is great" - *Iain Adan, New Pitsligo.*

"I recently purchased your 'WORD WIZARD' cassette. I must congratulate you on a wonderful
piece of software which represents excellent value for money. This is the third Bubble Bus
cassette I have bought - the two others are 'HUSTLER' and 'EXTERMINATOR', both of which
are also brilliant" - *Mike Dessau, Israel.*

What the papers say!

HUSTLER

"Another Gem" *Commodore Computing.*

"Top rate game" *Computer Choice.*

"The graphics and colour are superb" *Commodore User.*

"To pool freaks it's a must" *Personal Computing Today.*

"It's a must for the collection even if you're not a pool fanatic" *Commodore Computing.*

EXTERMINATOR

"The sheer speed of action keeps you more firmly pressed to the screen" *Commodore User.*

"The player will stumble away from the Computer, his head reeling with wild sounds, only to be drawn
back to get his next 'fix', for by now he will be so totally addicted only a power failure will be able to
release him" *Commodore Computing.*

"Value for money 100%" 5 star rating *Home Computing Weekly.*

"Finger pressing good" *Personal Computing Today.*

KICK OFF

"Great fun. Addicts of the original Table Football game will find this comes well up to
expectations" *Personal Computer News.*

"Anyone looking for something 'different' or fans of the actual game will appreciate this quality
offering." "Excellent game." *Commodore Horizons.*

WIDOWS REVENGE

"Challenging and great fun to play" *P. C. Games*

"Whole new ball game" "A good bet for all '64 owners" *Commodore User.*

FLYING FEATHERS

"Graphics excellent as is the sound track"
Popular Computing Weekly.

'Nuff Said!!

Take a good look. Only a few provide quality and
innovation at sensible prices, although many shout
about it!!!!

PRAISE FOR THE LIGHTS!

Dear Sir,
Brilliant, fantastic, incredible, breathtaking. In fact, I can't praise your *Sound and Vision* program highly enough (C&VG April).

The effects are certainly as good as any 'pulsonic' disco lights that you can fork out for in music shops, and listening to tapes now has a new dimension.

Pass my congratulations on to the programmer, Colin Holgate.
Andrew Sinclair,
Morpeth,
Northumberland.

BATTLE WITH THE PIRATES

Dear Sir,
The law recognises that for most crimes the accomplice is as guilty as the culprit. So by definition you, C&VG, are guilty of piracy.

In your April '84 issue, in the column headed piracy, you state, I quote, 'C&VG supports any move which will halt software piracy'.

Well, why don't you start by: Not printing listings which are poor imitations of originals?

Not reviewing any new games which are obvious rip-offs?

Not printing small ads for programs whose only use is for piracy (commonly known as back-up facilities)?

Above relates to *Pole Position* and *Q*Bert* from the April issue. No doubt some green users bought your mag., thinking they would be the arcade games, as you state in the contents column. Maybe this is one for the ASA.

Don't you read your own micro ads? Copying or exchange is a violation of

copyright (exchange under the illegal distribution of software). I am glad Keith Campbell had second thoughts on his swap shop.

So come on C&VG, let's see you take the lead and do something. I am a member of two Edinburgh computer clubs and on the committee of one. These views are entirely my own, although in an up-and-coming debate, I intend to quote from your magazine.
David Burnett,
Edinburgh.

Editor's reply: I don't think we print any 'poor imitations', David. Our listings are tried and tested by a team of independent reviewers who pass on their views to us. We think that they are fairly representative of our readers, so the games they like we reckon the rest of you will like too. If a commercially available game is a rip-off, then we'll tell you in the reviews we write.

As we have already pointed out several times in the past, C&VG is firmly against any form of software piracy and will support any moves which will help eradicate it.

We'd like more feedback on the issue of piracy, so if anyone else out there has strong feelings about the subject — for or against — we'd like to hear from you.

HOW MUCH MEMORY?

Dear Sir,
Please could you tell me how many k the Commodore 64 actually has? BBC owners say that half of the 64's memory is used up by cassette operations, graphics

etc. So please could you put Commodore 64 owners in the picture?

Also which Donkey Kong would you recommend for the CBM 64?

Stephen Whiteley,
Cumbria.

Editor's reply: Although the 64 does have 64k, it's true that it uses a lot for graphics and other 'housekeeping'. The largest program you can write in Basic is around 39k.

There are not many Kong games around for the 64 yet — but you could take a look at *Anirog's Kong game*.

YET MORE ON ATARI!

Dear Sir,
I am a sixth form computer studies student, and I am a regular reader of C&VG because it offers the best reviews on software and is generally unbiased. I am greatly disappointed, therefore, when I see things like the *Golden Joystick Awards*.

Everyone knows that the prize is bound to go to the software house which produces games for the best selling micro — dare I say it — yes, the Spectrum. Do you seriously believe that readers of C&VG will vote irrespective of their machine?

As you can see, I am a little biased because I own an Atari 800 which, in my opinion, offers the best games-playing potential and certainly the most software which brings me to another quibble.

Out of all the games you review, it is rare that there is more than one Atari review. Do you have it in for poor old Atari? We all know he's got a criminal record as long as your arm, what with

rubber keyboards and expensive software, but now Atari is going straight. Can't you relieve him and let these excellent machines have a real chance? It almost makes me wish I'd bought a Spectrum, just to stop the alienation — almost.

On the same theme, could you start to review Datamost software for the Atari, as one particular program, *Tail of Beta Lyrae*, offers the best arcade package, sound and graphics animation that I have seen for some time? The brilliant playability and sound in these games must surely put an end to the Commodore vs. Atari sound debate.

Also, can the Commodore 64 produce quality speech synthesis entirely from software control, such as S.A.M., as can the Atari?

Finally, to make a run only program, add the following line to the end of your listing: 32767 POKE PEEK (138) + 256 + PEEK (139) + 2, or: SAVE "C": NEW.

Type GOTO 32767 in immediate mode and the program will be saved in a special format, preventing a listing being made when re-loaded. You will have to type RUN "C:" (changed accordingly for disc owners) to run your program — the LOAD command will not function properly.

Tony Dolman,
Doncaster,
S. Yorkshire.

Editor's reply: We take your point about the awards, Tony, and we may be making changes in the categories for next year's awards. I hope the mammoth review of Atari software in April's C&VG went somewhat toward the 'rehabilitation' of the Atari in your eyes! Thanks for the tips — and your views on our favourite computer magazine!

MAILBAG

READER GOES ON AND ON...

Dear Sir,
I started to buy your great magazine way back in November 1982 when I borrowed a little black magic box called ZX81. Even though I had to return it, I continued to buy your magazine and shortly afterwards I purchased my own computer — a TI-99/4A.

Since then I have written about 10 games which I thought might be worth reviewing in your magazine.

Unfortunately, they were all on the same tape and the dreaded cup of coffee got to it and ruined it. Anyway, due to problems with the Texas, I had to return it to my dealer.

Do you know bad luck comes in threes? My dealer does not do the Texas anymore because Texas Instruments have given the machine up!

I have recently written a number of programs for a video shop that has a Sharp MX-80k to control his stocks and, due to the flexibility of Sharp's computers, I am now awaiting delivery of the MX700 — and here are my questions.

Why does the printer/plotter reproduce graphic symbols from the computer onto paper in HEX?

How many languages can this computer handle without any extra hardware?

What idiot gave the names MZ-700, 710, 711, 721 and 731 to the machine just because there is no plotter or cassette unit with the machine?

Would you consider publishing games listings for this computer?

Does this computer use the conventional CLS to clear the screen or the same graphic symbols as the MZ80k does?

Regarding the C&VG Arcade Championships, my high degree score on Atari's Star Wars took over seven hours to complete. One day I had been on it so long, the

handle grips came away in my hands and I have proof of this because about four people were watching the game when it happened.

Anyway, I shall continue to buy your action-packed magazine until you go broke from publishing letters this long.

J.P. Hamilton,
Thornby-on-Tees,
Cleveland.

Editor's reply: In answer to your questions.

The plotter's character ROM does not contain any GRAPHICS symbols and so the plotter responds with the HEX equivalent of the ASCII symbol.

Several languages are available eg. Pascal, Fort, etc, available from Knights Computers (Aberdeen) or the Sharp Users Club (Yeovil College).

All these different versions are available as standard units in Japan.

We would consider publishing games in the future when the machine becomes popular with our readers.

The same graphic symbols as the MX-80k are used to clear the screen.

ELECTRON ANSWERS

Dear Sir,
As I will soon be purchasing an Acorn Electron, I would like to know if Acorn will be bringing out any more games software other than the 10 we know of?

As it has the same Basic as the BBC, will BBC games be compatible with the Electron? Are there any major disadvantages with it?
L. Thompson,
Leicester.

Editor's reply: The answer is yes to your first two questions, Mr Thompson, and no there aren't any major disadvantages with it, although it is slower than the BBC.

MORE FROM ATARI FAN

Dear Sir,
I must write to endorse Gary Campbell's comments (C&VG April) concerning the Atari's sound. I agree with him that it excels in this department. Perhaps David Gardner may be interested to know that machine code programmers on the Atari have access to an incredible nine-octave range and full envelope capabilities.

He may also be interested to know that the bad sounds on Choplifter are common to all Broderbund games that have been translated from the Apple to the Atari. Unfortunately, sounds are not the Apple's strongpoint and, as Broderbund seem content to do straight Apple translations, the sound inevitably suffers. This being the case, I hardly think an Apple to Commodore translation will offer any improvement sound-wise.

I would also like to put you straight on a comment you made in your reviews of the 600XL some months ago. In it you stated that 'Atari still provided no way to stop the machine cycling the colours on the screen.' Well, the magical command is POKE 77,0. You can enter it either as a direct command or every time you execute a Graphics command during a program.

Finally, I enjoyed last month's long overdue review on Atari software. I think if anyone was to see games such as *Blue Max*, *Astrochase*, *Necromancer* and *Bristles*, to name a mere few, they would consider them well worth the money when compared with games for other computers.

Jim Short,
Motherwell,
Lanarkshire.

VIC MISSED ON CHARTS

Dear Sir,
I've been buying C&VG for about six months now and,

up to now, I've been very pleased with it. But in April's edition I was very angry with the Top 30 Chart because it doesn't contain a single good game for the Vic-20. So please, please bring back the old charts for the Vic-20.

Stephen Wells,
Portsmouth,
Sussex.

Editor's reply: Our charts are now compiled by NOP Market Research, one of the top research companies in the country, in conjunction with the Daily Mirror newspaper, so our charts are the most accurate around.

Unfortunately, Vic-20 owners don't seem to be buying enough software to get it into the new charts at the moment — but keep watching them. I'm sure you'll see Vic-20 games in the charts very soon.

MARTIAN SUPPORTER

Dear Sir,
I would like to make a comment on Craig Thackray's review of *Caverns of Mars* for the Atari. He said, and I quote: "Atari also have a version of *Scramble* which is now well known. *Caverns of Mars* is a poorly made, roughly finished, overpriced game with little resemblance to the original."

In my words, this is piffle! I bought *Caverns of Mars* for £9.90 and it was made by APX, so that counts out the bit about "overpriced", "poorly made and roughly finished".

I do agree with the bit about "little resemblance to the original", as I don't think that *Caverns of Mars* was meant to be a variation of *Scramble*, as the idea is to activate a bomb and escape. On the whole, I think that Craig was looking at a different game!

David King,
Balerno,
Mid-Lothian.

MIND GAMES

PETTIGREWS DIARY

£7.95

(Dragon, BBC, Electron)

Three Part 90K adventure taking you from the serene Oxfordshire countryside through bustling London streets, to an epic journey through Europe. Superb family entertainment filled with intrigue, action and suspense. "Pride of place for the most original and entertaining Adventure — it's got to be value for money" *Computer and Video Games* (adventure supplement).

EMPIRE

£6.95

(Dragon, BBC, Electron)

Exciting game of strategy with eight levels of difficulty. Destroy the evil Empire before it conquers the world — Played on a world map. "This is a terrific game — visually attractive and highly addictive" *Home Computing Weekly*.

MYSTERY OF THE JAVA STAR

£7.95

(Dragon, BBC, Electron)

Enormous four part adventure with 3 playing levels. Mount an expedition to the South Seas to discover the secrets of the 18th century shipwreck. Absorbing family fun with puzzles, challenges and interesting facts.

NORTH SEA OIL

£5.75

(Dragon)

Equip and run your own North Sea Oil rig — allocate your resources, then navigate your supply vehicle, supervise drilling operations, and operate the platform until you have collected 100 million dollars.

JERICHO ROAD

£5.75

(Spectrum 48K)

A challenging adventure set in biblical times with two levels of play. Set in Southern Israel in the 1st century, the player must survive the vigours of Roman occupation and cope with the perils of religious persecution. Ideal family entertainment.

AVAILABLE NOW AT ALL GOOD STOCKISTS (Selected titles available at W H Smith and larger branches of Boots) or by MAIL ORDER (send cheque/PO) from SHARDS SOFTWARE, 189 Eton Road, Ilford, Essex IG1 2UQ, or telephone through your Access/Visa order to 01-514 4871.

MAILBAG

SILENCE IS FRUSTRATING

Dear Sir,
After many desperate hours of trying, I still cannot find a way to make the keyboard on my Dragon make a 'beeping' sound each time a key is depressed, as can the Atari and Spectrum with the aid of a POKE.

Could you please give a listing of the program in your wonderful magazine? I, and a lot of other Dragon users, would be grateful if you could do this.

Jonathan Thomas,

Aberdare,

Mid Glamorgan.

Editor's reply: Well, can anyone help Jonathan? Please reply to Mailbag at the usual address.

ADVENTURE UPSTART!

Dear Sir,
I eagerly await each copy of C&VG, and the first page I always read is the Adventure feature. I do enjoy reading about adventures and occasionally obtaining a clue. I myself am an Adventure addict — I do not even look at arcade games.

I have often been tempted to write to comment on a game or ask for help, but until now hadn't got around to it. I read your page in the March issue and I feel I must write now and correct you on your comments about Urban Upstart.

I bought this game one Saturday and worked on it for about four hours then finished it on the Sunday afternoon. Urban Upstart was certainly not the easiest adventure to finish, but I enjoyed every step. *Julie Redpath, Blairdardie, Glasgow.*

Keith Campbell replies: If you remember, Julie, I did say that the idea was good, but ruined by the implementation. For me, it was the very slow display of the graphics that made waiting for the input prompt so

frustrating — coupled with a very limited vocabulary. Perhaps it depends on what you are used to in the way of adventure games.

If everybody agreed with everything I said in every review, then I'd be worried! I tried to convey my honest feelings about the game, as I always do. Perhaps I differ from the majority on this one — but, personally, I found it to be a real pain. If it were rewritten in a more competent way, then I would probably quite enjoy it.

CROSSWORD PUZZLE!

Dear Sir,
While reading through April's issue of C&VG, I noticed the first of a new series of crossword competitions. The rules said that the first three correct answers drawn out of the bin would win T-Shirts. I'll bet you didn't get many incorrect answers. If anyone read the magazine properly they would notice all the answers to the puzzle on the next page!! Was this a deliberate mistake?

Mark Walker, Outer Hebrides, Scotland.

Editor's reply: Deliberate? Us? Never! It was April Fool's, wasn't it?

THE PRICE OF PIRACY

Dear Sir,
In your April issue of C&VG, you mentioned the problem of piracy in Games News and I will say that I totally agree with the very last part of your article which stated: "Lower prices and a more original approach to games software is what is needed, not legal muscle, to solve schoolchild piracy".

Honestly, can you blame someone of 12 years old copying a tape which costs in the region of £14 to £20 or more? This is the price you

would expect to pay for video films which can take up to six years or more to make.

Quite honestly, the software houses have taken advantage of the computer user for too long. Look at the price of *The Hobbit*, for instance. It is nearly two years old but it still costs £14.99 — surely it should be half that price by now? And there are lots of others that are over-priced.

No, the only way to reduce the problem of piracy is to bring the price down such as Imagine is doing (from £5.50 to £3.95) which can only help the company.

I would also like to ask why you don't have four pages devoted to letters, then more could be published. Let's face it — it's your readers who support you. But after all that, I will end up by saying that your mag. is the best monthly around.

Julius Uri, Sheffield.

Editors reply: We agree that some games are over-priced — but that's really no excuse for pinching other people's programs which have often taken many months of effort to produce.

Piracy could put a lot of smaller software houses out of business and stop programmers producing better and more original games. End of lesson!

We'd like to give more space to letters — and we will as soon as we're allowed to have a few more pages to play with.

WE WANT FLEXIDISCS!

Dear Sir,
One day I was out browsing through micro magazines when I saw another magazine offering a free flexi-disc — you know, those floppy little records that come with pop magazines.

It was a small record with programs on it for the most popular computers around like Spectrum, BBC, CBM 64, Atari etc. I thought it was a great idea — in fact, so great

I bought it.

How many people out there wish they didn't have to slog over their computer for hours on end trying to type out a program. I think it is a very good idea, so of course I decided to put pen to paper to tell you that your readers might find it as good as I did. Because I get your magazine, I think it would be great if you issued one every so often in C&VG.

I believe the majority of your readers would enjoy receiving a flexi-disc, so go on — be daring. Satisfy your readers with one!

Spencer Holdaway, Camberley, Surrey.

Editor's reply: Just watch this space, Spencer. You won't be disappointed. Sorry to be so secretive, but the Bugs are listening!

A SPORTING CHANCE?

Dear Sir,
There are a lot of people around who advise you not to purchase software through mail order outlets. Well, I am writing in praise of Save-It writing in praise of Software.

Exactly one week ago I saw *Pole Position* at a price of £26.99 (nearly £2 cheaper), so I sent away for it. Today I got it, and what a game it is!

In your magazine, your reviews are smashing. In games such as *Pole Position*, *Tennis* for the Atari and *Snooker* for the BBC, why not have the reviews done by the stars of those sports? It could be James Hunt, John McEnroe and Steve Davis respectively. This idea might not work so well with Manic Miner, though. Can you see Arthur Scargill actually getting Miner Willy to work?!!

David Gratton, Warrington, Lincoln.

Editor's reply: Just look at our feature on motor-racing games with top Formula One driver Martin Brundle, on page 116, David!

*The sky's the limit!!..
for fun and excitement with these
cracking new stunners from
Ocean.*

Here's more top games from Ocean to test the best of you top games masters.
Outstanding classics and incredible originals all available for the **Spectrum 48K**.

FOR SPECTRUM 48K

CONQUEST

CONQUEST A tactical game which even veteran players will find both challenging and rewarding.

Mediterranean Europe is divided into grid squares. Your aim, as Emperor, is to gain 100 squares of territory as quickly as possible—at the same time dealing with Barbarian counter-attacks, plagues, civil war and rival Emperors.

5 levels of skill, plus a continuous 'Conquest' game where all the difficulty levels are thrown in together.

3D BAT ATTACK An all action, 3 dimensional maze game where you gather up blocks of gold, at the same time pitting your wits against vicious vampire bats whose only purpose in life is to locate, hunt and kill you.

4 levels of skill. At each level the game gets faster and more complicated, and the vampires more dangerous.

CheetahSoft

Soft we're not

FOR SPECTRUM 48K

3D BAT ATTACK

AFTER THESE, THE REST IS KIDS STUFF.

Are you ready for CheetahSoft?

There's only one way to find out.

But be warned: these vampire bats know a good meal when they see one. And our friend with the scythe has had years of experience...

CheetahSoft

Soft we're not

So don't play unless you're ready to play the game for real. Because you'll find there's one sure thing about CheetahSoft: Soft we're not.

RAINBOW'S SPECTRUM PROGRAMMABLE JOYSTICK INTERFACE WITH SOUND NOW IMPROVED

- ★ The keyboard is NOT disabled when using the Joystick.
- ★ You can have a Through Port — See Below.

As before, its features are:

- PROGRAMMABLE** — Allows any joystick position to represent any key on the Board — without wires, or leads, or tapes!
- UNIVERSAL** — Enables use of ALL Software
- AMPLIFIED SOUND** — Internal micro-chip amplifier boosts Spectrum's beep with simple connection to ear or mic socket
- EASY TO USE** — All joystick positions are programmed simply by selecting joystick position, pushing desired key on spectrum, releasing joystick, and then the key.
- ADAPTABLE** — Accepts diagonal positions.

ONLY £24
Extra for
Through Port — £3
plus £1 p&p.

This is a top quality product with guarantee

ROBOTICS

So, you want to win one of Tomy's terrific Voice Recognition Robots, do you? Well just switch on a few memory cells and see if you can answer these questions set by the Supreme Android himself. Then all you have to do is send your answers, on the coupon, to *Computer and Video Games*, Robot Competition, Durrant House, 8 Herbal Hill, London, EC1R 5EJ. Normal C&VG competition rules apply and the Supreme Android's decision is final. Any arguments will be settled with a quick blast from his Kill-O-Zap laser — OK?

NOW FOR THE QUESTIONS...

- 1 What was the robot which appeared in that classic science-fiction film, *'The Forbidden Planet'* called? You may have to ask your dad for help answering this one...
- 2 What was the name of the world's first paranoid android — often found in the company of inter-galactic hitch hikers?
- 3 Heavy metal? Heavy hint! What is the name of the robot star of a famous TV comedy show?
- 4 Which robot helped Luke Skywalker destroy the Death Star in the first *Star Wars* movie?

ZRK

Just in case we get a lot of humans getting the answers correct, the Supreme Android also wants you to come up with a name for the C&VG robot which we use to help sort through all your competition entries! The best names will help us decide just who will get the goodies!

Closing date for this amazing contest is June 16th — so get cracking and you could soon have a mechanical mate at your service!

ROBO ARMATRON

C&VG/TOMY ROBOT COMPETITION

My answers are:

1.
2.
3.
4.

My name for the C&VG robot is

HOTLINE COMPETITION RESULTS

For those of you in the know, last month we ran a Hotline competition on the special Bugphone where you had to identify the sounds of six ColecoVision games in the order they were played.

However, we did have quite a few perplexed phone calls from people complaining that the Bugphone was full of weird, squeaky noises and where was the Bughunter?! We're glad to say the Bugphone is now operational again.

We had 50 of ColecoVision's latest games cartridges to give away — 25 for the ColecoVision and 25 for the Atari VCS. The entries flooded in and most of you Viddies got the answer right, although many of you confused one of the games with Golf.

Anyway, the prizes are on the way to the lucky winners and the answers in the correct order were:

1: Smurf. 2: Donkey Kong. 3: Carnival. 4: Mouse Trap. 5: Space Fury. 6: Pepper II.

Joe the Lion Results

And so Joe the Lion set off on a quest of immense magnitude — to solve the riddle of the mystic book that would lift an evil curse that had a whole bunch of software companies tied up in knots. They had lost the power to create games programs.

However, Joe had one problem — although he was courageous and brave, he wasn't clever enough to solve the mystery all by himself and this is where you came in.

Last month we printed an extract from the mystic book and asked you to help Joe find the names of the software companies hidden in the text.

There were 180 games to give away to those who managed to crack the riddle first — 60 copies of *Bimbo* for the Spectrum, 60 of *Challenger* for the BBC and, for *Oric* owners, 60 copies of *Loki*.

Very few of you managed to pick out all 47 software companies hidden in the text. Congratulations to Wai Fung Wong from Luton, Ben Bryant from Kent, Dane Kurth from Switzerland and Cameron Harvie from Devon, all of whom got the correct answers. Prizes are being sent out to those of you who came nearest to the magical number of 47.

The names of the hidden software companies are:

Rabbit	English	QED	Artic	Acme
Silversoft	Interceptor	RSR	Shiva	Bug Byte
Sunshine	A&F	Imagine	Elephant	Lobster
Bridge	CDS	Suprior	Melbourne House	QuickSilver
AberSoft	CP	Softex	Salmonander	Doctor
Ocean	CPJ	Addictive	Richard Shepherd	Mr Micro
Crystal	UK	Savari	Romik	Poison
Vision	LCL	Ultimate	Durell	
Level	PSS	Automata	New Generation	
Quest	Llamasoft	Fantasy	PAE	

CROSSWORD

This is the first in a series of brand new C&VG crosswords. The first three correct answers out of the C&VG memory bin will get an amazing "The Champ" t-shirt. Just send your completed crossword to *Computer and Video Games*, Crossword, Durrant House, 8 Herbal Hill, London EC1R 5EJ.

Clues — Down

1. It's entered into the computer (5)
2. Execute a program (3)
3. Game variation for a particular machine (7)
4. Where Invaders came from (6)
5. Powerful chess pieces (6)
6. Gets a readout of the lines of a Program (5)
9. Automation (5)
11. Bilbo (7)
12. Rapid graphics feature (6)
13. Device for disks (5)
14. Break the rules (5)
15. Top card (3)

Clues — Across

5. Sinclair's QL (7,4)
7. Red card (5)
8. I'd drive (anag.) (6)
10. Parts of Programs (11)
13. Use a spade with a hound for a computer game? (3-3)
14. Top 30 games or records (5)
16. Computer musician from Yazoo (5,6)

FREE! DRAGON ARCADIA

OK Dragon owners, hear this! If you have missed out on our free Imagine games offers in the past, this could be your big chance to make up for lost playing time! Our friends at Imagine have generously handed over 100 copies of their hit game *Arcadia*, hot off the presses for the Dragon.

Arcadia is a classic space shoot-out — and was one of the games nominated for the C&VG Golden Joysticks Award, earlier this year. It's well worth adding to your games library. All you have to do is fill in the form below and rush it off to *Computer and Video Games*, Durrant House, 8 Herbal Hill, London EC1R 5EJ. Remember only the first 100 will be lucky — so be quick to avoid disappointment!

LET SLEEPING MUMMIES LIE MUMMY MUMMY

A new game for the 16k Spectrum will banish forever the myth that computer games are only for children.

Mummy Mummy is set in Egypt, thousands of years ago, during the reign of the infamous Nefertiti. You play the part of the mummy who has been slumbering in peace in his pyramid for hundreds of years.

But you are awoken from your sleep by the ghost of Mad Clive, a greedy archaeologist, who died while trying to plunder the pyramid and your tomb in particular.

You must complete two difficult tasks before you can be reburied, hopefully to spend another millennia fast asleep in your gold sarcophagus. First, you must collect the 25 pieces of the burial scroll hidden in the pyramid, necessary if you are to return to the coffin.

Next you must destroy the ghost of Mad Clive and the distressed souls of former Egyptian rulers who haunt the pyramids by bringing down the stone roofs and burying them under the rubble.

Mummy Mummy is available direct from MC Lothlorien for the 16/48k Spectrum and costs £5.95.

PS MC Lothlorien are one company who are leading the way with a new type of game — the

strategy war game. The games combine the best of arcade and adventure software. Fast and furious shooting action is interlinked with brain-racking military decision-making. In future issues, C&VG will be exploring these new 'cult' games.

SHERLOCK HOLMES GOES MISSING!

SHERLOCK HOLMES

Sherlock Holmes' greatest mystery could well turn out to be the case of the missing game.

The Sherlock Holmes adventure game was announced exactly one year ago having already been several months in development.

Twelve months later every adventure games fan in the country is beginning to wonder when they can get their hands on it.

The answer is elementary, my dear reader. The end of May is the latest official launch date forecast by Melbourne House.

Sherlock Holmes is undoubtedly the biggie of the year from Melbourne. Billed as the next adventure game from Philip Mitchell, of Hobbit fame, it can't fail.

Before Holmes hits the streets, Melbourne House are squeezing in three other new games.

Medieval Castle from John Jones Steel, the man who wrote Abersoft Forth and Classic Adventure, is the programmer's first foray into arcade-style adventure games.

The game is similar to the

arcade game Wizard of Wor in which you have to get through several rooms to destroy the evil wizard.

C&VG managed to get this sneak preview of one of the game's screens.

Also causing a stir amongst Spectrum owners is the new tough guy, Mugsy. Just in case you haven't got the word yet, Mugsy runs this joint, so you'd better not mess with him — otherwise the boys will be round.

This comic book-style game combines arcade play with an adventure format — the text appearing as speech bubbles.

64 owners are also included in Melbourne House's spring releases with a space shoot-'em-up called Star Trooper. Sounds a little bit like Ultimate's Jet Pac this one. With a jet pack on your back, you must blast your way through waves of aliens to get to the mother ship to refuel and fill up your oxygen cylinders.

Sherlock Holmes will cost £14.95. Star Trooper, Mugsy and Medieval Castle are £6.95 each.

EARN YOUR WINGS ON A '64!

FIGHTER PILOT

The highly acclaimed flight simulation game for the ZX Spectrum, Fighter Pilot, is now available for the Commodore 64 — and it's even better than the original!

Digital Integration's Fighter Pilot has been shooting up the charts during the last few weeks, and has proved itself one of the most popular and

sophisticated games available for the Spectrum.

Commodore owners will now be able to buy what is undoubtedly the best air-to-air battle game available for any home micro. The 64's larger memory and better built-in facilities means that the game now includes sound effects and much improved graphics — plus all the old options like landing, combat practice and mechanical malfunctions that were included in the Spectrum version.

Digital Integration have also just released a second flying game, Night Gunner, which differs from Fighter Pilot in that it is less complicated to play, but it has a more arcade-type feel. The company are presently working on a Commodore version, but this won't be ready for some time yet, unfortunately.

Fighter Pilot for the Commodore 64 will be released in late April or early May and should sell for around £7.00.

HOW TO SURVIVE THE RUSH HOUR!

LEMMINGS

A few years ago, a small hand-held electronic game, called Game and Watch, caused quite a stir in the newspapers when it was released. A lot of people were rather shocked by the game's macabre story line.

The object of the game was to save the babies who were being thrown out of a burning orphanage, by bouncing them into a waiting ambulance at the other side of the screen.

S G·A·M·E·S N·E·W·S

ILLUSTRATION: TERRY ROGERS

A new game, Lemming Syndrome, is similar, but steers well clear of the touchy subject of burning orphans. Instead, it relies on commuters, who are so desperate to get to work on time, they are willing to be bounced across a bridge-less river on a moving trampoline.

At first, the flow of commuters is very light and it is fairly easy to get them across safely.

As 9 o'clock draws nearer, however, the rush hits its peak and you'll be stretched to make sure everyone gets to the other shore bone dry.

The Lemming Syndrome is available from Dynabyte Software for the BBC model B and costs £7.95.

ELECTRONIC WORKS OF ART

ELECTRONIC ARTS

Electronic Arts, a company renowned throughout the United States for producing games which most critics have labelled 'state of the art', are preparing to unleash their range of Commodore 64 and Atari titles on the unsuspecting British public.

The company has been formed by independent, some would say 'renegade', programmers who have left the established software houses to form

a company dedicated to producing the ultimate in computer entertainment.

One of Electronic Arts' founder members, Bill Budge, had already written Raster Blaster, a classic pinball game for the Apple and Atari computers before joining. His second game, Pinball Construction Set, was even better than his first attempt and has been widely acclaimed as the most sophisticated program of its kind.

Their range of games for the 64 and the Atari have been making waves in America for some time now, but England has so far missed out.

However, Centresoft, a Birmingham company who specialise in importing American software, will begin selling the games in late April, though there is one small problem — they cost £30 each!

You can see what C&VG think of Electronic Arts' Hard Hat Mac in the reviews section further on in the magazine.

The most intriguing of the new games is Archon. The game's designer, Jon Freeman, was dissatisfied with the limitations of established strategy games like chess and Go. 'I like chess, but I find it boring. When I play, I like to spend 30 seconds on one move.' So he decided to write a board game combining the strategy of chess and the lightning reactions of an arcade game, and Archon was born.

CRACKING THE CASH CODE

THE CODE

There's more big money up for grabs in a new text adventure game which will go on sale next month with a £2,500 cheque waiting to be presented to the first person to crack the code.

Once you have discovered the code — which makes up a

secret telephone number — you can dial it to claim your prize.

But no one ever wins these prizes, I hear you say. True, we've never heard anything about Artic's Crackit, and the company are mysteriously tight lipped when you remind them about the cash prize no one has so far won.

Then there is a certain loony in a pink suit — commonly known as the PIMAN who is driving people up the wall in pursuit of his golden sundial of Pi. Watch Keith Campbells' Adventure Column for some interesting news on this one.

The manufacturers of The Code assure me that the game is different — and that someone will actually win it — even if they haven't sold three million copies of the game first.

To ensure fair play, The Code will be sent out to everyone who has sent their money for a copy on the 1st of July.

This means everyone will have the same amount of time to solve it.

The Code is written by a new company called Soft Concern Ltd of Warwick and costs £9.95 for the 48k Spectrum.

G·A·M·E·S N·E·W·S

A FLOCK OF FLYING SHEEP?

SHEEP IN SPACE

Jeff Minter, the man behind Commodore classics like Gridrunner and the brilliant Revenge of the Mutant Camels, is preparing to stun computer owners and horrify animal lovers with his new game — Sheep in Space.

The game is set on not one, but two different planets. It is a scrolling game and shares many similarities with the arcade game, Defender, but it has many aliens and different objectives to complete.

The planet's surfaces are arranged along the top and bottom of the screen. You have to fly your laser-shooting sheep between the two planets. Landing is no problem, as long as you don't mind walking upside down on the top planet.

Both planets contain a huge artillery gun and a nuclear power station. A close watch will have to be kept on both of them, as they are very unstable. If they explode, both planets will

be destroyed and you and your faithful sheep will be thrown into outer space, to face certain death battling against mutant aliens.

Sheep in Space is available from Llamasoft for the Commodore 64 and costs £7.50.

NB. Atari owners will soon be able to buy Revenge of the Mutant Camels for their computer. Llamasoft have promised an Atari version in the next few months.

MAY THE SAUCE BE WITH YOU!

PASTA BLASTA

Forget laser swords, intergalactic hyper blasters and antimatter bombs, the universe's most deadly weapon is a plate of half-eaten spaghetti.

Pasta Blasta, the first game in the Pasta Wars Trilogy, is set in an Italian restaurant far away at the edge of the galaxy. Heinz Solo, the hero of lasagne lovers everywhere, is fighting to save his last few tins of ravioli from the sauce-thirsty, ravenous Pasta Pinchers.

Armed only with his small bottle of tomato ketchup, he must squirt away the hungry monsters and dodge the pac-people running around the tables, if he is to have any chance of saving the vital ravioli.

Pasta Blasta is the first of a trilogy of games based on the exploits of the daring waiter, Heinz Solo.

The second game is being written at the moment and is to be called, the Ravioli Strikes Back. The third game has yet to be named, but The Return of the Pasta doesn't seem unlikely.

Pasta Blasta is available from Swansea-based Arcadia software for the 48k Oric 1 and Atmos, and costs £5.50.

BUILD YOUR OWN EMPIRE — BY POST!

EMPIRES

When a Galactic war breaks out there is only one winner — make sure it's you.

This rather apocalyptic message is the slogan behind a brand new strategy war game just going into the shops.

Empires is the name of the game and building empires is the object of this four player game.

You choose to play the part of Earthlings, Robozons or The War Lords of Tyre. One player must be the Umpire — though this does not mean he doesn't take part.

The designers of the game say that there is a large amount of role playing in the game, similar to Dungeons and Dragons.

By exploring neighbouring solar systems, mining minerals, and increasing your wealth, you can build powerful space fleets.

Cultural and communications differences soon bring you into conflict with the other players.

By doing battle with your opponents, you can assess their strengths and weaknesses.

You have won the game when your opponents have all been destroyed and you totally dominate the galaxy.

Each player has his own cassette which loads his characteristics into the computer. The relevant program must be loaded into the Spectrum to enable the player to take his go.

During a turn, the options open to a player are typed in and the computer taps out its response — scrolling horizontally across the screen.

Also in the box are four cardboard maps of the galaxy to enable the player to keep a track of his moves. Data cards for recording the movements of ships, and four separate sets of rules — one for each player.

Empires was dreamed up by a new three-man software house called Imperial Software. It has been designed so that it can be expanded to add greater complexity and realism and also to enable more players to take part — including a play-by-mail option.

If you fancy yourself as an Intergalactic Emperor, you'll first have to find £19.95 and own a 48k Sinclair Spectrum. Imperial are based in Poole, Dorset.

Screens from Empires

G·A·M·E·S N·E·W·S

YANKEE DOODLE DANDEE

JOHNNY REB

The American Civil War and its victories, defeats and atrocities are relived in a brand new war game that simulates the conflict that almost threatened to tear the nation in two.

The game, Johnny Reb, is set at the beginning of the American Civil War near a small river crossing between the massed forces of the Unionist north and the Confederate south.

The game can be played by either one or two players. In the one player game, the computer acts as an opponent and an impartial referee. Once the sides have been chosen, troops must be picked and the battlefield selected.

Tactics are all important. You must choose the right balance of artillery, infantry and cavalry or run the risk of having a seriously weakened defence.

The object of the game is to overrun the enemy and capture their flag, but don't expect it to be a walk-over — because the computer has been well trained and has quite a few surprising strategies up its sleeve.

Johnny Reb is available from MC Lathlorien. The Dragon 32 version costs £7.95 and the Spectrum version costs £5.50.

War gaming fanatics had better keep their eyes peeled over the next few months. C&VG's reviewers are pulling on the jack boots and covering themselves in camouflage paint in preparation for the launch of a new, regular war gaming column. So remember to have a raid on your local newsagent every month.

OPEN INVITATION FROM ACORN ACORNISOFT

Acornsoft have released two new games for the BBC micro and have ended the famine of software that has affected the computer.

Free Fall and Crazy Tracer are two of the games at the forefront of Acornsoft's new and more aggressive games production. After a period of many months of inactivity, the company have also just released a flying game, Aviator, and a program based on JCB Diggers as well.

Crazy Tracer is loosely based on the game Qix. The aim of the game is to fill all the empty squares on a grid while avoiding all the nasty monsters who run along the outside.

Free Fall, on the other hand, is set on a space station orbiting a lifeless planet. As the sole surviving member of the crew, you must defend the base bare-handed from the attacks of Alphoid warriors.

Free Fall and Crazy Tracer are available from Acornsoft in Cambridge for the BBC micro and cost £9.95 each.

Buying BBC software won't be such a hit and miss affair anymore, providing you live in London.

Acorn have opened a shop in Henrietta Street, in the heart of Covent Garden and the company are inviting people to come along and test out new hardware and software for the BBC and Electron computers.

The shop is now opening on Saturdays, too, so there will be no excuse for not popping in, and testing Free Fall and Crazy Tracer for yourself.

DESIGNER OF THE MONTH

Name Matt Newman

Game Fortress

Born Dorset 1968

Matt Newman is the typical stereotype of a young computer whizz-kid who has made himself a fortune writing games.

Only 16 years of age, Matt is still studying for his O'levels but he has already become a rich man. He is too reticent to reveal how much money he has earned from programming Fortress '50 for the BBC computer, and only coyly mentioned, "I have earned more money this year than any of my teachers could hope to. They would be furious if they knew."

Matt is already a veteran programmer, having had two games programs published by Pace and Micro Power. Both were quite well received, but Fortress has already proved itself to be his most successful

project to date.

At the moment, Matt is taking a well earned break from writing, but he hopes to start on a brand new game as soon as he's finished his exams.

I asked him how his friends had reacted to this new-found wealth. "They are all very interested in my work. I don't think any of them are jealous of my success," he replied. "The money certainly won't change me. I just want to stay the way I am."

Favorite Food: Ice cream covered in crushed Mars bars.

Favorite Drink: I quite like Martini, but coke and orange juice is my favourite.

Favorite TV Programme: Danger Mouse.

Favorite Computer Game: Planet-

oids, by Acornsoft.

Countries Visited: France, Germany, Belgium and Holland, among others.

Pets: A goldfish, an eel, two tortoises and an eight year old brother.

Ambitions: To be able to get involved in computer research and development.

Favorite Bands or Groups: Genesis, The Doors and Pink Floyd.

Just in case you've forgotten how our team of games experts judge the games we review on these pages, you will find a brief description of each category in what follows.

1 FORTRESS

MACHINE: BBC
SUPPLIER: Pace Software
PRICE: £8.95 cassette
£11.95 disc

The BBC computer seemed to me to be going through a very bad patch over the last few months.

The flow of games had been reduced to a trickle of mediocre software, with most companies directing their efforts towards Spectrum and CBM 64 products.

Although the trend for further reductions in releases for the BBC doesn't look likely to be reversed there are a few exceptional games for the computer — if you look hard enough.

Fortress is definitely one game that earns that distinction. Even though it's not an original idea, it more than equals the original version of Zaxxon.

Anyone who has seen the arcade game will know that any game that even comes close to capturing the addictive quality and stunning graphics on a home computer is quite a feat.

All the game's original features are there and the sound effects, generally very poor in BBC software, are reproduced faithfully which is very impressive.

I have only two small criticisms to make of the game.

First, it is a little difficult to control using the keyboard, but I suppose it's only to be expected with a game of its type.

Second, the fuel supply runs out far too quickly and you ditch into the sea all too often without noticing that your 30 seconds of fuel have disappeared which interrupts the action somewhat.

Apart from these two points, the game is certainly streets ahead of most BBC shoot-em-ups and deserves a place in any self-respecting software collection.

CITY ATTAK

MACHINE: CBM 64
SUPPLIER: K-tel
PRICE: £6.95

You may be forgiven for thinking that Space Invaders was dead and buried under piles of alien corpses. But you were wrong! The invaders are back — and twice as mean — on the Commodore 64.

K-tel's latest release for this increasingly popular micro is called City Attak and combines the challenge of that old favourite with a few nice new twists.

You control a city defence ship patrolling the skies above a city — depicted in nicely drawn graphics. The cityscape scrolls along beneath you and all is peaceful until the aliens appear!

Two rows of the little nasties are on the move toward your base back in the city centre. Can you stop them before they reach Mission Control and destroy it?

Wave after wave of the aliens come at you so it's one of those games you can never win — but enjoyable despite that!

The twists I was talking about come in the form of Urban

Commandos who race along the city streets intent on invading Mission Control. You can stop them by hovering overhead and dropping bombs on them as they run — an extremely satisfying pastime if you manage to take out an entire troop.

Another twist which is not quite so easily dealt with is the nasty Neutron Mass which rolls along at ground level guided by a small red fireball. This can only be destroyed by a direct hit to the centre from above. Not as difficult as its sounds — but the earlier you hit the mass and the more times you manage this feat, the greater your score.

If you miss the mass and allow it to reach your base — well, there's not much left of it afterwards.

The game is very playable — but I'm not sure about its lasting appeal to the seasoned victims of many alien assaults. Having said that, if you are the proud owner of a 64 and want an invader-type game, then you could do worse than shell out £6.95 for City Attak from K-tel.

AD ASTRA

MACHINE: Spectrum
SUPPLIER: Gargoyle
PRICE: £5.95

Ad Astra will really scorch the keyboard off your Spectrum.

There's nothing new here to speak of. Your spaceship flies through space, encounters aliens, battle ensues. You know the plot backwards.

What is special about Ad Astra is the quality of the graphics and the speed of the action.

If you've ever seen the arcade games Galaga or Gyruss, then you'll know what I mean by a super fast shoot-em-up.

Ad Astra is similar to Gyruss in that the ship moves through a slightly curving plane as it dodges the oncoming planets and takes pot shots at the aliens.

The first attack wave features some very impressive planets which spin towards you revealing the details of the craters when they are at close range. You can't shoot these but have to dodge in and out of them — no easy task in the bulky Deep Space Patrol.

This is one of those games where you want to get onto the next wave, then the next and the next to see how long you can survive and to see how much you can see.

Another nice touch is the laser fire which has an authentic trajectory pursuing a razor-sharp line until it disappears into deepest space.

Just one gripe: the alien laser fire was difficult to stop amongst the distant stars — no game for the short-sighted this.

This game deserves to do well. If you want a plain and simple space shoot-em-up for your Spectrum, you won't find anything better than Ad Astra.

2 PSYTRON

MACHINE: Spectrum
SUPPLIER: Digital
Integration

PRICE: £7.95

Strategy games seem to be catching on at the moment. Stonkers has been selling well and now Beyond Software hopes to emulate Imagines' success with their latest, *Pystron*. Although this is another arcade/strategy game, it's nothing like *Stonkers* — thankfully.

Pystron itself is the defence system of the Betula 5 installation. The *Pystron* scans for oncoming intruders, tracks down potential saboteurs and generally makes the world a safer place in which to live.

During the game, you take on the rôle of the *Pystron* and your objective is to survive the oncoming attacks. A lot of strategic planning is involved and a game can take quite a long time to play.

It's not words-only, it's graphics based, and very impressive they are too. The installation can be viewed from 10 different viewpoints and the graphic representation on each is superb. Only two colours are used, but this is the only possible way round the Spectrum's limit on colour resolution.

There are six levels to the game and the idea is to survive for a certain amount of time at each level while also achieving a sufficiently high score. You can't progress to a level until you have succeeded at the one before it. Because of this, and to save experienced players having to complete the early levels each time they play the game, you can save scores to tape and continue with the same game another day. In fact, you can save the five highest scores so far, so you can select your best efforts.

Level one is fairly straightforward. As controller of the Pursuit Droid on a mission from the *Pystron*, you must seek and destroy the alien saboteurs

2

Which are being beamed down into the installation's service tunnels in the airlocks. You can see the three-legged aliens crawling through the tunnels on the main screen and you're also given a close-up view of the area in a small window in a corner. By level four, you will have to send in repair crews to patch up the damage caused.

Level two has you patrolling the skies above. The game still takes place on the same set of graphics screens, but uses a different area. Your ultimate objective again is accurate firing and surviving for a certain fixed time limit.

Level six, the final conflict, asks you to survive for an hour. Achieving this goal has two advantages. First, you can tell your friends that you've just finished level six of *Pystron*. Second, if they're not suitably impressed, then tell them that you now qualify to win a QL if you're the first to have finished the game. This really will make them green.

If you're a fan of this type of game, then you'll love *Pystron*. It's certainly complicated and you'll have to come back to it quite often if you've any chance of winning the QL. (It's just

hope that Clive can actually deliver the goods before someone wins it.)

All the normal features are here — sound effects and joystick options. The 20-page manual tells you almost everything you need to know, but is let down by some awful grammar and spelling. The important facts are correct, though.

It's well worth the £9.95 asking price, but — be warned — it's not a game which you can conquer in a single sitting.

INVASION FORCE

MACHINE: Spectrum 48k
SUPPLIER: Micromania
PRICE: £6.95

I was a little sceptical about the *Stack Light Rifle*. After all, most early TV games had them and they weren't a big hit them, so why now?

After using it for a few minutes, though, I couldn't help wondering why it had taken so long for it to appear for a home computer. The rifle itself is quite

light and resembles an ordinary plastic toy gun. It comes with a demonstration tape but we decided to review it, together with an independently produced game from Micromania called *Invasion Force*.

Invasion Force is based loosely around a *Missile Command* idea but, instead of lines of incoming missiles, you must shoot a large range of alien creatures while protecting your six cities at the bottom of the screen.

I had a little trouble to start with — nothing seemed to happen when I pulled the trigger — but after turning the contrast on the telly right up, everything was fine and the gun and software worked perfectly.

Although the rifle is quite light, after about half an hour your shoulder will ache like hell. Aiming at the screen for long periods also takes its toll on weary eyes — so be warned.

The game, although fairly basic, was enjoyable but the graphics are only of average standard for the Spectrum.

FIGHTER PILOT

MACHINE: Spectrum 48k
SUPPLIER: Digital
Integration

PRICE: £7.95

Flight simulations have proved increasingly popular over the last few months as software houses have come to realise that many gamers want something more stimulating than the traditional shoot-'em-up.

Fighter Pilot is one of several simulations now on the market and is a flight simulation of an F15 Eagle — as USAF fighter jet. The game includes several options such as Landing Practice, Flying Training, Blind Landing, Air-to-Air Combat Practice and Air-to-Air Combat — a wide range of choices that

R·E·V·I·E·W·S

will give you some idea of the intricacies of flying a fighter jet.

Sitting in the cockpit, you've got an incredibly detailed and impressive flight panel in front of you which takes up approximately one quarter of the screen. This is your bible — a watchful eye must be kept on all dials at all times if you're to remain airborne.

There is no landscape to speak of — the screen is divided into blue and yellow depicting the air and ground.

However, you won't have much time to look at the landscape. All your concentration needs to be on your altitude, speed, artificial horizon and radar settings, as you juggle with the controls to keep on a steady flight path and on the right bearing.

Air-to-air combat is probably the most difficult of the options, but at least you're given the chance at a few practice runs before you set out to engage a hostile enemy.

As soon as enemy aircraft are in your vicinity, a lightning symbol will flash and it's time to switch to Combat Mode which activates your guns and shows your ammunition status.

After playing around with Fighter Pilot for about 10 minutes, I realised that it would take a considerable length of time to become reasonably proficient at the game. I was also surprised at how addictive a flight simulation could be.

Fighter Pilot is available for the 48k Spectrum and I played it using the keyboard, although a joystick option is available.

The controls are extremely sensitive and it takes a while before you are able to fly in a straight line at a set altitude bank and turn the craft.

One you have mastered the controls, you can go onto the more difficult options like a Blind Landing and Air-to-Air Combat.

BC BILL

MACHINE: Cbm 64
SUPPLIER: Imagine
PRICE: £3.95

If I told you Imagine's new game for the Commodore 64 was a million years behind every other computer game I had ever seen, you could be forgiven for thinking it was a scathing criticism. In fact, it's quite a compliment.

BC Bill is the story of a young caveman trying to make an honest living in a harsh world full of dinosaurs, flying reptiles and nagging wives.

Armed with a wooden club, Bill roams the countryside outside his cave looking for some food to whack over the head. For a caveman, his diet seems remarkably modern and includes hamburgers, sausages and crinkle cut chips.

Once he has clubbed the food, he drags it back to the cave to feed his wife and the growing army of children. If Bill doesn't produce enough food to go round, his wife will leave him without hesitation to find someone better to live with.

But if things are going well and all the children have been fed, Bill's not the least bit shy of dragging any cavewoman he finds back to his cave. But no amount of Bill's charm will entice her to stay if he hasn't collected enough of her favourite hamburgers!

Bill's progress is hampered by a convoy of dinosaurs thundering past his cave. If he is wise, he'll stay out of their way but occasionally he will pluck up enough courage to sneak up behind a Tyrannosaurus Rex and try to kill it.

The game has some nice touches, including the changing seasons — for instance, it is more difficult to survive during the bleak winter months. Also a pterodactyl takes the role of a prehistoric stork by dropping babies into the cave.

The game's originality is matched if not bettered by the

graphics. The character of Bill actually looks like a stocky caveman dressed in animal skins and the whole game has a cartoon image rather than the crude jerky graphics we've all seen too many times.

BC Bill couldn't be more different from Arcadia, but I'm sure Imagine are heading for just as big a success with BC Bill, especially with a super low price of £3.95.

HARD HAT MACK

MACHINE: Cbm 64
SUPPLIER: Centrosoft
PRICE: £30.00

"Ahh, not another climbing game!", I screamed when the disc version of Hard Hat Mack was discreetly dropped on my desk by the Editor, who, luckily for him, rapidly disappeared back into his office, leaving me to contemplate suicide or at least resignation.

But, even I can be surprised. Hard Hat Mack certainly contains enough surprises to have even the most jaded Donkey Kong player cooing with admiration and praise. The game includes all the ingredients that are vital for a climbing game, but has so many added features, inventive twists and original and refreshing ideas that the game has an extra dimension which sets it apart from any I have seen before.

Hard Hat Mack, as the name suggests, is set on an unfinished construction site. You play the part of a hard hat trying to finish the work on a skyscraper by placing small girders and riveting them into place.

In the second level you have to collect all the tool-boxes that are lying around the site. You will have to negotiate conveyor belts, weak girders and huge magnets before all the equipment has been collected.

The third level proves even more difficult for the hard working Mack who must get hold of the steel blocks and drop them through the girders into the riveting machine. But you'll have to avoid falling into the machine or running into the exposed wiring hanging from the ceiling if you want to complete the building.

Even getting across the screen is made tricky by gaps in the steel girders. The only way to move from one side to the other is to jump on the top of the two springboards and bounce over to the other side.

You're all thinking that this sounds just too good to be true and there must be a catch somewhere. Well, you're right, there is one small problem — it costs £30.

NIGHT GUNNER

MACHINE: Spectrum
SUPPLIER: Digital
Integration

PRICE: £6.95

Having played Digital Integration's first flying game, Fighter Pilot, I was expecting the second, Night Gunner, to be quite similar to its widely successful predecessor. But the only thing the two games have in common is they are both set aboard aeroplanes.

In the game, you take on the duties of a rear gunner, perched at the back of a fighter bomber, shooting at enemy jets and bombing fuel dumps and military bases on the ground.

You control a sight which you use to home in on planes and reconnaissance balloons that are circling your plane. My main criticism of the game is that the keys are placed in such awkward positions, it's almost impossible to play it without a joystick, or three pairs of hands, so control of the sight is difficult.

The game's fast graphics

Comments about the game from press and our customers

"FOOTBALL MANAGER is the best game I have yet seen on the Spectrum and my personal favourite of all the games on any micro... To the ordinary person it is an excellent view of what can be done in the field of computer games... The crowning glory of this game is the short set pieces of match highlights which show little stick men running around a pitch, shooting, defending and scoring... It is a compulsive game but people who cannot take game sessions of 9 hours or so, which happened on one happy Sunday, will be grateful to know that there is a 'save to tape' option, FOOTBALL MANAGER has everything it could... The

originator, Addictive Games, certainly deserve the name." Rating: 19/20 (Practical Computing – August 1983).

"When I first received this game I spent the best part of the weekend playing it. Since then I have returned to it more often than any other. The truly addictive quality of this game is the remarkable way it mirrors the real football manager's problems..." (Personal Computer Games – Summer 1983)

Addictive Games

7A RICHMOND HILL, BOURNEMOUTH BH2 6HE

Dealers! For urgent stocks send your headed notepaper direct to our address.

Getting started: This not only covers how easy it is to load the game, but also how good the instructions on the cassette inlay are. A low mark means the game takes ages to load and the manufacturer hasn't bothered to tell you just what that fuzzy green thing in the corner of the screen is!

more than make up for difficulties I had playing the game for the first half hour. And I'm sure anybody who is lucky enough to have a joystick won't have very many complaints.

Each of the three missions are completely different graphically and tactically. The first obstacle you will have to overcome is the enemy's air defences of jet planes and balloons. The second mission is a low level bombing run over the countryside, and the third and final mission is a blind bombing raid at 20,000 ft.

The display also flashes warning messages from the pilot detailing the damage the plane has incurred and the likelihood of it blowing up and crashing to the ground.

Keeping an eye on the information from the pilot and trying to concentrate on actually bombing the targets takes some time to master, but it's definitely worth it!

Night Gunner is an interesting and enjoyable follow-on from Fighter Pilot, but don't expect the game to be similar, because it's nothing of the kind.

SLURPY

MACHINE: CBM 64
SUPPLIER: Creative Sparks
PRICE: £7.95

Table manners are the order of the day in this game — or rather the lack of them.

Gliding round the screen, you have to slurp up various objects which appear. However, some of them are poisonous, in which case you only have a second to spit them out.

The central character is Slurpy, a Q*bert lookalike. His language may have been cleaned up, but his eating habits are appalling. He must travel

round the screen, helped by the fast-reacting joystick-finger of the player.

The game is set in a cave where small blue and red pills bounce around, happily minding their own Pac-Man-like business.

But here's where the similarity to other games ends. You have to go round eating the pills by touching them with the glittering force-field which extends in front of Slurpy's nose.

If they're blue, then all's OK. If they're red, this means poison, and they must be rejected from the body before they reach the stomach. You must spit them out by pressing the fire button on the joystick.

But if you think that's all there is to this game, then you'd be wrong.

In addition to the pills, or Glowbugs as they're officially known, there are various other undesirable wandering the cave.

On higher levels there are more of them, but even on early levels you'll encounter scorpions, blinking eyes and more. All of those can be slurped up, provided that they're blue and not red.

At the base of the cave is a row of eggs. If these are touched by one of the aliens, then they'll hatch and more meannies will be born.

All the action takes place against the clock: stay in the cave too long and it'll start to cave (sorry!). In the screen shakes and pieces of rock start falling from the roof. If you manage to get out in time, then all's well. If you don't, then chances are you'll be hit by a piece of falling debris.

The vortex in front of Slurpy's nose is the only part of his body allowed to come into contact with his food. — if anything except a glowbug touches his body, he'll lose one of his three lives.

I think this game's great. There are remnants of other hit games in there, but the overall theme is different enough not to be called a rip-off.

The game uses joystick control, but I found it hard to control Slurpy at times. With perseverance, though, I managed to reach screen five.

Slurpy is from Creative Sparks, the new software division of Thorn EMI. This makes you feel more like you're buying a computer game and less like you're getting a fridge or dishwasher.

JAMMIN'

MACHINE: CBM 64
SUPPLIER: Task Set
PRICE: £6.90

Life really is hard in the music business.

In order to reach number one, Rankin' Rodney must negotiate all 20 screens of the game. Each screen corresponds to one position in the chart, so the first screen which you encounter is number twenty and the final barrier is number one itself.

The idea is to collect the musical instruments which are dotted around the screens. There are also 'bum notes' (a musical term) in there as well, which must be avoided.

There are also patches of distortion (another musical term, though more polite) which will do serious damage to Rodney's health.

Although the idea of the game is great, it's let down badly by being totally unplayable. Rankin' Rodney dances about the multi-coloured mazes, but can only walk on one colour at a time. So if he's on a blue square and wants to hop to collect an instrument on an orange square, he'll need to change colour.

To do this he must jump on to one of the multi-coloured triangles which will change him to a random colour.

This method is far from satisfactory. Moving round the maze is too complicated and the game plays more like a strategy puzzle than an arcade game.

As one book reviewer said, once I put this down I couldn't bear to pick it up again.

The music's good, though. Each screen plays a different tune and the rhythm is really strong. The cassette claims to exploit the 64's sound to the limit, which is true. It's a shame, then, that the game is so poor.

The facilities are all there — you can choose which screen you want to start playing from and you can also save the high score table to cassette, which is something I've not seen before.

All in all, a pretty boring game. If you only want to sit and listen to the music, then it's worth the £6.90 from Task Set.

If you're after a decent game for your Commodore 64, though, you'll have to look elsewhere.

ESKIMO EDDIE

MACHINE: Spectrum
SUPPLIER: Ocean
PRICE: £5.90

Pengo has successfully made its debut into the home computer 'market' over the last few months.

With several versions of the game already on the streets, I wondered what was in store with Eskimo Eddie.

Featuring Percy the Penguin, polar bears and snowglobs, it just had to be set in the frozen wastes of the arctic.

Eddie, warmly wrapped up in a hooded parka has to trundle across the paths of two polar bears and whizzing icebergs to rescue Percy the Penguin who's stuck at the top of the screen. This level is played in Frogger style with the polar bears and

R·E·V·I·E·W·S

Graphics: Are they really as mind-blowing as the adverts say they are? Does the screen scroll effectively? Do those aliens really leap out of the screen at you? This is how this category is judged.

Value: Is the game really worth all those pennies? How long will its attraction last?

icebergs moving across the screen from both sides at varying speeds. Percy has to be rescued three times to get to the next level.

Graphically, this first screen isn't very impressive and contains almost no colour. However, the polar bears are excellent — they look as if they've just stepped off a glacier mint!

Eskimo Eddie takes a bow and departs at this point. You're left alone to escape the snowbugs who resemble little Pac-Men. Unfortunately for Percy, they have an insatiable appetite for penguins and he has to work very hard to escape from and kill these little yellow monsters by squashing them with blocks of ice. However, don't relax — each succeeding level gets harder.

I know the Arctic isn't a very colourful place being, for the most part, covered in white! However, I do feel that more colour could have been used throughout the game. The title page is excellent, graphically exciting and more colourful than the game itself.

3 ORANGE SQUASH

MACHINE: CBM 64
SUPPLIER: Merlin
PRICE: £6.95 cassette
£8.95 disc

Orange squash is very nice on a hot day and Orange Juice sounds great on your record player, but the juicy fruit flunks out on your computer.

Orange Squash from Merlin Software is almost a good game — pretty graphics, lots of screens, but impossible to play.

The game is a Manic Miner-style climbing game in which you control a cute little orange called Oswald.

As Oswald hops his way to that great orange tree in the sky, he has to deal with several

nasties with the customary zany names.

The sparkling wits, or should I say twits, at Merlin seem to think that calling certain of the nasties things like Eugene's balls and the Awesome Camels is hilariously funny. It may be to a minority of people in the software business, but it is meaningless to just about everybody else.

Screen one features the Rollerballs which Oswald has to shoot as he climbs the platforms collecting the lemons. To get onto the Awesome Camels on the next screen, he has to touch a flat at the top of the screen.

Although this sounds like a fairly simple climbing game, in practice it is nothing of the sort. Oswald moves far too slowly. It takes several seconds to get to where he makes his first platform hop — which is intensely irritating at the beginning of each new game.

Jumping from level to level is also a bit of a hit or miss business — more to do with luck than skill — and just far too difficult.

TRAFALGAR

MACHINE: BBC
SUPPLIER: Squirrel
PRICE: £8.00

Shiver me timbers! Those Frenchies are at it again. Not only do they want to stop our 'amb getting across the channel, they are also determined to actually win the Battle of Trafalgar — well, the computer moderated re-match of this famous battle anyway!

Squirrel Software of Manchester have come up with a neat reconstruction of Admiral Lord Nelson's most famous encounter with the French fleet for the BBC B. You can play the computer or take on a friend in this reconstruction of the historic event.

The game begins with a screenful of sea — showing the positions of the fleets. You can manoeuvre your ships using the shift key — which creates a random movement of the opposing ships.

Some strategy comes in here. You can tell the size of each ship by the number of masts it has and some larger ships have more cannon than smaller ones. Don't stand up against a massive heavily armed French

frigate with a smaller, not so well armed ship, otherwise you could be in trouble.

Once you've sorted out the dangerous ships, you can go into battle. Choose an encounter by watching a pointer which scrolls down the side of the screen — you can stop it by using the space bar. When you press one of the fire keys, the display changes and you'll see two ships facing each other across the waves.

Below the ships there is a useful display showing the number of cannons on each ship, the wind speed, which affects the flight of your cannon-balls and the trajectory of your cannons.

The wind speed keeps changing so you'll have to be quite quick altering your aim to blast the enemy ships. These encounters continue until all your enemy ships have been destroyed — or your own fleet is on the bottom of the ocean!

The game doesn't make the most of the Beeb's animation capabilities, but the graphics are quite good and the exploding ships are extremely satisfying.

You have tens ships to play with and can add to your total by capturing enemy ships. The winner is the Admiral with all his ships still seaworthy.

As I've already mentioned, the graphics don't really make use of the BBC's capabilities — but all the same Trafalgar is a good combination of arcade action and strategy which will while away some rainy Sunday afternoons quite happily. A game for the younger wargame addict.

However, I've got one major criticism. There are no printed instructions included in the packaging! With a complex game such as this, it's just not good enough to have the instructions displayed before each game starts. A big slap on the wrist, Squirrel!

REVIEWS

4 JCB DIGGER

MACHINE: BBC
SUPPLIER: Acornsoft
PRICE: £9.95 cassette
 £11.50 disc

Amid flags, badges, specially-made JCB ashtrays and a performing excavator outside, Acornsoft launched long-awaited JCB Digger last month.

The intention to write this game was announced almost before the launch of the BBC micro itself. Unfortunately, the wait hasn't been worthwhile.

The game was conceived by JC Bamford, makers of excavators and the like. They approached Acornsoft, suggesting that a game be produced to act as publicity for both companies. One of the main conditions of the agreement was that the digger would not actually be destroyed during the game.

The image of the indestructible machine would not be helped much if a couple of meanies came and blew it up! So they needed a different way of introducing those meanies, and came up with the idea of them taking over the driving seat and driving the machine away.

The game puts you at the controls of a JCB digger and your job is to clear the small island, on which you stand, of undergrowth and stony ground. Simply driving the vehicle over the area in question will clear the path.

To make things difficult, there are the meanies. If one touches you, then it'll forcibly evict you from the driver's cab and go off for a joyride.

Your defence is to push the aliens into the lake or sea which, as the game is set on an island, is not too hard to find. Alternatively you can dig a hole and hope that a meany will eventually be short-sighted enough to walk into it.

Although the idea of the game is great, the program is far from perfect. The four-directional scrolling makes the screen

flicker badly, which is particularly noticeable when moving up and down.

Control is via a joystick or the keyboard and response from the controls is sluggish and inaccurate. I also found that the digger frequently refused to pick anything up, even though I was driving straight across it which was very frustrating.

This is not the best game for the BBC, and I wouldn't recommend it, but if you're still intent on getting a copy, then your local dealer will be happy to oblige.

A real JCB digger costs £24,000, while the program is comparatively cheaper at £9.95 on cassette or on disk for an extra £1.55.

5 EAGLE

MACHINE: BBC
SUPPLIER: Salamander
PRICE: £7.95

Eagle by Salamander Software is a glorified lunar lander game for the BBC.

If you've never landed a lunar, the idea of the game is very simple. You control a craft descending through numerous levels — avoiding the nasties.

Eagle has five levels and also challenges you to collect pods to score points as you descend through the Moons of Thrug.

The graphics are pretty on the first screen as you dodge in and out of the blue, floating asteroids.

You are also racing against time as your fuel will not last forever unless you touch each and every pod on your way down.

Key control in this game is quite fun as you have a thrust button which enables you to hover and then slowly move forward.

Careful control of the thrust button is vital in Eagle if you are

to avoid being buffeted around the screen like a ball bearing in a pinball machine.

Though not the most original game ever to emerge from the Salamander stable, it is surprisingly addictive.

The game provides plenty of opportunity for deploying various strategies and you will find it difficult to put down until you have got to the bottom.

three-dimensional world, 15 miles square. Although the scene is chiefly barren desert, there's a river, complete with bridge, and also a small town called Acornville.

At the start of the game, you have a pilot's eye view of the runway. The screen is split — the lower half being the dashboard and the upper half the view from the cockpit.

The dashboard gives you a reading for air speed, height, rate of climb, rudder and joystick position etc., and also a radar screen showing the

6 AVIATOR

MACHINE: BBC
SUPPLIER: Acornsoft
PRICE: £14.95 cassette
 £17.65 disc

BBC owners can now take the controls of a Spitfire, courtesy of Acornsoft.

Aviator, launched this month, is the company's first flight simulator for the machine.

It was decided to go for a Spitfire, as opposed to a passenger craft, as the former allows you to perform aerobatics and special movements. Lowering a 747 Jumbo to five feet and flying under a bridge is not easy.

The game is set in its own

plane's position relative to the rest of the world.

Initially, you are positioned at the start of the runway and are ready for take off. As the fuel tanks are automatically filled, apply full throttle and turn on the engine.

At this point, the sound effects start. The engine sound is very realistic and changes in volume and pitch, depending on which manoeuvre you happen to be performing at the time.

Handling is excellent, though at low speeds, the joystick (you can also use the keyboard) feels sluggish and the craft is slow to respond.

Although you can simply fly around notching up air time, the program also awards points for special skills. There's a bridge to

R·E·V·I·E·W·S

fly under and the town of Acornsville to negotiate.

Approaching the town, you realise the full extent of the superb graphics. At first, the entire town is just a small dot on the artificial horizon, but as you approach, it becomes a number of dots — one for each building. Then, as you get closer still, you can distinguish between the buildings. Come too close and you'll crash into the building; fly between them and you can score points.

This is one of the best flight simulators I've seen. The dis-

7 3D TANK

MACHINE: BBC
SUPPLIER: Dynabyte
PRICE: £7.95

3D Tank Battle, as most of you can guess, is very similar to Battle Zone, an arcade game that had a limited success in the arcades, but which never became widely successful.

Tank Battle's screen layout resembles the original by using white, three dimension vector graphics line drawings on the

around, instead of the scrolling action you would expect, the screen goes blank for some time and the new picture eventually flashes on the screen.

The program is a fairly competent attempt at reproducing Battle Zone on the BBC computer. If you liked Battle Zone, then you could try your luck with this game. If not, then you can leave 3D Tank Battle firmly on the shelf.

• Getting started	7
• Graphics	7

• Playability	7

8 FIRE ANT

MACHINE: CBM 64
SUPPLIER: Mogul
PRICE: £7.95

Ants seem to be all the rage at the moment. Inspired no doubt by Ant Attack, Pedro and a host of others, the latest is Fire Ant for the Commodore 64.

Your character (an ant) and the queen are peacefully minding their own business in a quiet semi-detached clump of soil when a scorpion approaches, knocks you into a hole and carts your beloved queen ant away.

Your sole purpose in life now is to rescue the queen by passing through all eight chambers without being made into an ant sandwich for the benefit of a hungry scorpion.

I should mention that you'll need a joystick to play this game — it doesn't work with the keyboard, though don't ask me why.

The game isn't terribly exciting. In fact, it's rather slow. The claim that it's a fast action machine code game is not, in my opinion true. Machine code it may be, but that doesn't automatically make a game good.

9 CARNIVAL

MACHINE: Atari
SUPPLIER: Creative Sparks
PRICE: £9.95

Carnival Massacre is one of the new games in the Creative Sparks range which is not just an old Thorn EMI game in a new box.

The cartridge has all the elements of a modern horror film. Butcher Bill and Ruthless Rick are terrorising the funfair. It's down to you to reach for your gun and shoot them on sight.

The game is accompanied by fairground music which adds to

10 3D LUNATAK

MACHINE: Spectrum 48k
SUPPLIER: Hewson
PRICE: £7.95

Hewson's on-going battle with the Seiddab aliens has entered a new and bitter phase now that the Abingdon software house has developed the deadly

Z5 Luna Hover Fighter.

The new craft was developed after the death in combat of Flight Lieutenant Talbot in his ill-fated C64, and you can fly the Z5 if you've got a spare £7.95 with which to purchase 3D Lunatak.

Although 3D Lunatak churns out the same tired old scenario of shooting down the aliens (what's wrong with aliens anyway?), it does have some original features.

The best of these is the sound track which starts after the game has loaded. An interview between Briggs and his commanding officer takes you through the objectives and controls of the Z5. Unfortunately, this is not synchronised with the on-screen display — an amusing frill nevertheless.

The quality of the graphics was very disappointing — especially bearing in mind the £8 price tag.

play uses no colour, but this is no real drawback. Handling is good and, once you get the hand of the controls, flying is not too difficult.

The game comes with a map, keyboard chart and a 28-page flying manual. This is very well written and explains all the controls. Although not written in technospeak, there are a couple of advanced sections, but you don't have to read them.

Joystick control is slightly easier than using the keyboard, but you'll have to use a joystick without self-centring.

• Getting started	8
• Graphics	8
• Value	8
• Playability	8

familiar green background of Battle Zone. The landscape is filled with huge pyramids and strange alien buildings.

The major difference between the two versions is that, instead of moving forwards, you can only spin round to face the opposing tanks and planes, so there's no running away in this game!

The program also offers the options of having only tanks or only planes attacking your gun turret. The gun's sign is positioned using two moveable markers which give you some idea of how far and in what direction the bombs are being fired.

The movement of the enemy tanks and planes is very smooth, but when you swivel your gun

KOSMIC KANGA

ONLY £5.95 EACH

Available from most good software retailers. If your local software retailer is out of stock, send cheque/P.O. to Micromania, 14 Lower Hill Rd., Epsom, Surrey, KT19 8LT., and we will send your order by first class post free.

MICROMANIA

the tension in an uncanny way. The first screen shows children enjoying a ride on three big wheels. Suddenly Butcher Bill appears on the roller coaster and starts hurling missiles at the riders, sending them hurtling groundwards.

To avoid a nasty mess on the ground, our hero, Super Sam, must rush over and catch them. Once you have bagged six falling kids, a gun appears with which you can fire pot shots at Butcher Bill. An egg timer counts down the limited amount of time you have to shoot Bill to score bonus points.

Meanwhile Bill's even nastier brother, Ruthless Rick, is terrorising the passengers on the roller coaster by placing detonators on the tracks.

Each time the car passes over a detonator, a passenger falls out of the car providing another amusing game of catch.

Just to make things even trickier for Super Sam, a vicious bouncing coil is sent bounding towards him if he lets too many riders fall to their deaths.

All the time the action is taking place, the same loony tune grinds away. But there is good news for those who get driven bananas by computer jingles — you can switch it off.

Fun to play and nice graphics, though I am not sure how long the challenge of the game will last. Atari 400/800/600XL £9.95.

GAMES DESIGNER

MACHINE: Vic 3.5k
SUPPLIER: Galactic
PRICE: £9.50

If you thought that no one could fit a games designer program into 3.5k, then you'd be wrong.

There again, you'd also be right.

Galactic Software has produced a games designer package which runs on the unex-

panded Vic. However, because of memory limitations, the program is in about half a dozen parts each of which is loaded and run in sequence.

The two most important parts are the game base and the game formulator. The game base is used whenever you want to play one of the masterpieces you've created. You first load the data for the game as saved by another part of the designer program. Then you load the game base and it will interpret the data and run the program.

You first load in the graphics editor. This holds 30 characters which you define as aliens, players, objects and so on. The characters must be defined four times each, to show what they look like when pointing up, down, left and right.

Once you've created the obligatory player and target character (the one you must reach to finish the game), there are 16 other characters to use as and when you like.

When you're happy, you load the screen editor. This lets you place the characters you've just defined in their positions in the game. You can put in any obstacles or scenery by first defining the characters and then placing them using the screen editor.

Once the screen layout is complete, you choose the colour of the player and where he will start from. Then it's time to load the tune editor.

You can create a tune of up to 50 notes which will play continually during the game. As well as the tune, you can also have separate sound effects for aliens being blasted or players being blown to bits. For this, you'll need the sound generator which is yet another program to load.

Finally comes the game formulator which is really a long question and answer program. It asks you for the name of the game, what words are to be printed on the top score line, how fast the aliens travel in relation to the player and many other questions as well, including which keys will control the

action.

If the three free demo games which accompany the program are anything to go by, then it seems that Galactic Software has a potential winner on its hands.

KILLER GORILLA

MACHINE: Electron
SUPPLIER: Program Power
PRICE: £7.95

BBC owners don't need to be told how good Program Power's Killer Gorilla is — it topped the BBC software charts for several months.

Electron owners, on the other hand, may have been unaware that this excellent version of Donkey Kong is available for their micro, too.

The first screen is taken from the arcade game. You have to help the love-struck carpenter, Mario, to climb the ramps and ladders to reach his sweetheart who has been kidnapped by the gorilla and taken to the top of the Empire State Building.

Mario's climb up the ladders is hindered by the monkey's habit of throwing barrels and fireballs down at him. His only defence is a well timed jump and quick climbing.

Completing screen two involves surviving exploding custard pies, unpredictable conveyor belts and collapsing ladders.

Screen three presents Mario with a task resembling an army assault course. He must leap across holes in the platforms, jump onto moving elevators and dodge the iron bars Kong throws around.

I'm sure the Electron version of Killer Gorilla will be as big a hit as the Beeb game proved to be.

• Getting started	9

Playability: Will the game keep you up until the early hours of the morning, as you attempt to complete just one more screen in a desperate attempt to beat it? Or does it send you to sleep the moment the intro-screen appears? Could you spend hours locked away in your bedroom with it?

TOWER OF EVIL

MACHINE: Vic 20
SUPPLIER:
PRICE: £5.95

Tower of Evil really pushes the Vic 20 to its limits — albeit with the aid of an 8k Ram Pack.

Had I not played it myself, I wouldn't have believed it was possible to get such excellent speed and graphics out of this ageing machine.

It is based on the famous Spectrum game, Atic Atac, and the object is to collect all the treasure dotted at random around the castle of the evil Necromancer.

The beautiful princess Diana is incarcerated somewhere in the castle and it's down to you, Andros, to rescue her.

A friendly wizard from the court of King Salimos has given Andros the power to fling fire balls which is his only defence against the Necromancer's henchmen.

You will have to fight your way through eight levels of biblical-sounding nasties before you find yourself at the top of the eighth level to where the princess is imprisoned.

There are no less than thirty rooms in the castle, so it may be worthwhile taking a tip out of the adventure gamer's book and making a map.

Andros is moved around the castle with a joystick or keys — and, if I were to fault this game on anything, it would be his jerky response to the controls.

This really is nit-picking though because the overall impression of Tower of Evil is that it is one of the best games I have come across for the Vic 20.

At £5.95, it is also much better value for money than many of the cartridge-based games available for the Vic.

Tower of Evil is also available for the Spectrum.

SATURDAY JUNE 9th 9 a.m.-5 p.m.

commodore

Number One in the world of microcomputers.

This is our 5th International Commodore Computer Show and it's going to be bigger and better than ever, with something to capture everybody's interest.

Come along and try out the whole range of Commodore home and business computers, peripherals and software, and talk to the experts about them.

If you're a business man, you can keep ahead of the times by visiting our seminars hosted by Jim Butterfield, the internationally renowned computer expert, or for advice, visit the Milton Keynes Information Exchange.

But don't miss Patrick Moore, who'll be on hand to demonstrate

the Commodore Astronomy software, and unravel the mysteries of the Universe. He'll also attempt to answer any questions under the sun.

The kids will have fun meeting B.J. the Bear, Gortek, and adventuring in the games arcade.

There's lots more to enjoy, including music from Radio Luxembourg, so be sure not to miss this year's show.

All these fun and games cost only £1 for a child, £2 for an adult, or £3 for a family of up to four.

But then the knowledge you'll gain is priceless.

ARCADE

IT'S THIRSTY WORK

TAPPER

Building up an unquenchable thirst after a heavy session on your favourite arcade game seems to be a common occurrence. Well you can now refresh the parts most other games cannot reach with Tapper, recently launched in the UK by Bally.

Tapper is based on America's most famous beer — Budweiser — which is drunk in vast quantities by all the patrons of the bar.

Following months of research and testing, Bally came up with the idea of using the famous brand-name in a game which will appeal to both adults and youngsters.

The game is set in a bar in the Wild West with a frantic bartender serving pints of Budweiser to hordes of thirsty, rowdy cowboys. You control the bartender and have to tap and serve mugs of beer, slide them down to the thirsty cowboys who are all hollering for more to drink, catch the empties as they come whizzing back up the bar and pocket the tips.

Not content with giving the

barman one bar to look after, the manufacturers in their wisdom have given the poor man four bars to tend. As the game progresses, more and more thirsty customers pour in and the pace really hots up.

Initially, the setting is a western saloon, but further scenes include a punk rock setting and a space bar. The patrons are very colourfully dressed and come in a wide variety of nationalities and costumes.

In their research, Bally found that 'where youngsters will play

until they master a game, adults will not invest more than two or three plays to understand it'. The controls have been kept fairly simple, therefore, but the game does combine a challenge in reflex and hand-eye co-ordination.

It's certainly thirsty work, as you must zig-zag the bartender back and forth between all four bars in an attempt to keep all the customers satisfied.

The cabinet is also different and worth looking out for — there's a specially designed mug holder on which to rest your drink and a foot rail for those of you with corns!

CLOAK & DAGGER

After months of intensive training, Agent X is finally given a mission. His object — to find and destroy the secret laboratory where the dastardly Professor Boom has a bomb manufacturing plant.

In Atari's Cloak & Dagger, Agent X is dressed in the traditional spy uniform of trench coat and trilby which sets the scene in this thrilling game.

To reach the secret laboratory, he has to descend via a lift and make his way through a series of rooms, killing aggressive mutant guards and igniting bombs on his way out. There are also certain objects to be picked up for bonus points.

Each successive room is harder to get through and should Agent X lose a life, he'll have to play that room again in order to descend to the next.

Cloak & Dagger isn't an entirely original game as the way in which Agent X has to move through each room is strongly reminiscent of Tasmania, Berzerk and Venture.

As Agent X steps into the lift,

CLOAK AND DAGGER

he has a marvellous habit of playing with his yo-yo — a lovely piece of graphical animation which is incredibly lifelike. His facial expressions also change from a smile to a grimace, depending on how well you're doing in the game.

Once in the mad Professor's secret laboratory, our intrepid agent must steal the Prof's top secret documents, destroy the bomb factory and make his way back up to the surface.

The controls are very easy to master, with a move and shoot joystick. Agent X's bullets will fly in whichever direction he's moving at the time.

CIRCUS CHARLIE

Lions, fire-eaters and clowns — this game's just full of the fun of the fair and should appeal to those of you looking for a game where dexterity rather than shooting ability counts.

Circus Charlie, one of the new range of games from Konami, is set, as the title suggests, in a circus ring. With your suspense-filled audience sitting around the arena, you've got to pull out all the stops to give them the thrill of a lifetime.

Act one brings ferocious lions onto the ring. Putting your life into their paws, you climb onto a lion's back and set off round the arena in a series of hair-raising jumps through blazing hoops, in which timing is all important.

Other levels become progressively harder with scenes including a tight-rope act, flying trapeze and trampolining.

A very colourful game and one that is very playable. I feel it is a healthy sign that manufacturers are obviously trying their utmost to produce games with new and original themes to help boost the flagging interest of arcaders.

CIRCUS CHARLIE

Illustration: Brian Caves

ACTION

WILL YOU BE THE 1984 CHAMPION?

Julian Rignall, the 1983 Champion, with Dave Lee Trzvis.

Just how good are you on your favourite arcade game? The search is now on to find the 1984 Computer & Video Games Arcade Games Champion.

Your first move will be to fill in the coupon and, marking the envelope Arcade Games Championships, mail it to us at Computer & Video Games, 8 Herbal Hill, London, EC1R 5EJ.

All you have to do is take the form along to where your favourite arcade game lurks and

get the high score witnessed by the arcade owner or publican.

If you're good enough, you'll be invited to take part in a grand finale where you'll have to pit yourself against players of calibre. The overall champion will walk away the proud owner of a brand-new mystery arcade game and there are prizes for the runners-up too.

Here are a few of the high scores we've already received. Can you beat them?

STAR WARS	15,570,213
Martin Deem, Gosport, Hants	
POLE POSITION	64,060
John Hamilton, Cleveland	
GYRUSS	423,000
Mark Neale, Bournemouth, Dorset	
TIME PILOT	1,795,300
William Love, Renfrew, Scotland	
DRAGON'S LAIR	414,000
Wayne Beckett, Staffs	
TRON	2,758,983
David Wayman, Wilford, Notts	
PACMAN	3,221,000
Jon Stoodley, Liverpool

The superb **ORIC ATMOS**

- Lots of exciting programs available
- Built-in centronics printer interface (no RS232 needed - just plug in your printer)
- Full-featured keyboard with

- sculptured keys
- Separate keys for cursor control
- Built-in speaker
- Special sound effects for game programmers

The ATMOS has taken a remarkable step forward in home computer technology. But how?

Most Micros 'waste' a large amount of memory on operating functions like graphics, colour and sound. Oric saw that by running these tasks from a ROM memory, a huge amount of the ATMOS's valuable 48K RAM capacity could be freed for more advanced operations.

So the colour capability (8 graphics, 8 background), powerful sound synthesis and high-resolution graphics of the ATMOS are achieved with fewer demands on computing power than its competitors.

So what else makes the ATMOS so exciting? There's now a typewriter-style full-response keyboard, it's directly compatible with most domestic cassette players; and there's a wide choice of software. The ATMOS is designed for convenience, too - it uses extended Microsoft BASIC; your printer plugs in without an RS232; and it comes complete with leads and everything you need to get going.

We've a 4-colour Oric printer (which accepts normal paper) at a terrific value-for-money price. Soon, a 3" Microdisc Drive will be available, too, to complete the system. Take a look at the superb new ORIC ATMOS, in its highly distinctive black-and-red trim, at your Spectrum dealer NOW!

JOIN THE JET SET

Professor Video has been talking to Manic Miner addict, Aonghas de Barra, who knows just how to get the best out of Matthew Smith's latest bizarre epic Miner Willy.

Get set for Jet Set Willy — it could well become the most popular home computer game ever.

Just three days after its launch, Willy zoomed straight in at the number one spot in the C&VG/Daily Mirror Top 30.

It looks like staying there for

some time too, with every software shop in the country reporting the same message "we just can't get enough."

Willy burst onto the gaming scene last year when Bug Byte launched the zany climbing game with weird and wonderful nasties like mutant telephones and man-eating toilets.

Jet Set Willy is the sequel — set in a sprawling mansion which our hero bought with the profits of his mining exploits.

The aim of the game is to get Willy tucked up in bed. Not as easy as it sounds this, as first you have to collect all the items scattered around the house and

then get past Maria, the mad housekeeper, who is barring the entry to his bedroom.

Jet Set Willy is such a tough game that Professor Video thought you could do with some good sound advice. One of the Prof's star pupils, Aonghas de Barra of Dublin in Ireland, has come up with some hot tips and a map of Willy's mansion to help you find your way around and deal with some of the nasties you will encounter.

Now, you may wonder "why the map?" Well, unlike Manic Miner, you don't have to collect all the items in a room to move to the next. Worth remembering

this — as, with no less than 60 rooms, it could take you months.

To leave a room you simply choose one of the many exits and leave — appearing instantly in the room above, below or beside the last one, depending on your choice of exit.

The map shows all the possible directions of movement, traps or ropes which can be swung on or climbed and exits.

There are also secret passages — some of them very hard to find, let alone get through (no wonder he called that room the Forgotten Abbey).

Another difference from

Jet Set Willy Miner Willy's Mansion

\$ Indicates Ropes to swing/climb
Large numbers - things to collect from each room
Small numbers - see room key

* Fatal passage

There is no escape from 'Entrance to Hades' it's a trap!

Please note! Only Exit a room at the point at which the line leaves or you may lose all your lives!

The arrows indicate the possible directions which you may travel in.

Master Bedroom

The Banyan Tree

The Nightmare Room

Manic Miner is that there are stairs which may be jumped through or walked up. To jump through them, leap at them from the ground and you may, or may not, pass through. If not, try a different approach.

Rope technique will require practice. Do not shy away from the ropes, though, as they are not that difficult to master and you will need this skill for later stages of the game. The secret is to push left if swinging right on the rope and push right if swinging left.

When you reach the top of the rope, you will either move onto the next room or stick, as you are unable to go any higher. If

this happens, wait for the rope to swing you close to the roof and jump. Here you will find all the nasties: dancing kangaroos, evil priests, mad monks, killer birds, crazy chefs, penguins, moving flags, razor blades, barrels, saws, rubber ducks, scissors, security guards, flying pigs, arrows, a few creatures that are indescribable and, in the Nightmare Room, Willy turns into a flying pig being attacked by hordes of Marias.

The tuneless 'In the Halls of the Mountain King' which was the musical accompaniment to Manic Miner has been replaced by 'If I Were A Rich Man' from Fiddler on the Roof — its tone

decreasing each time a life is lost. Musical philistines, however, can switch the music off if they so wish.

Jet Set Willy has no demonstration mode, so if you want to see all the rooms, you'll just have to play long and hard.

One room not worth bothering with is the Entrance to Hades. If you do manage to get into it, you will see why.

Aonghas points out that so far he has only collected 50 items but is confident he will get the rest of them soon and get

To the Kitchen's main stairway

into the remaining rooms. When he does, he'll be straight on the phone to Software Projects to claim the prize. But rest easy, Willy fans, Aonghas has promised that Professor Video will be the first to know how it was done.

ROCKY'S NO LIGHTWEIGHT!

Box clever when you plug in Coleco's latest cartridge, for the game introduces that champion of the big screen — Rocky.

Sylvester Stallone appears on screen at the beginning of the game in an amazingly clear computer graphics picture.

The game is the second in the range designed to be used with the new Super Action Controllers, reviewed also in Joystick Jury this issue.

Four skill levels are featured which enable you to slug it out for three, five, 10 or the full 15 rounds.

The game is best played by

two players who can choose to be either Clubber Lang or Rocky. There is a one player option, however, which enables you to play Rocky against a computer-controlled Clubber — and a tough opponent the Coleco makes, too.

Your boxer can be made to throw jabs, block punches, deliver body punches and duck — all of which facilitate various strategies and techniques which the player can develop.

The more punches you soak up, the lower your fatigue level and there is also a daze level indicator to tell you how many stars you can see. The secret to success, just as any old pro will tell you, is to duck, dive, bob and weave.

The game features a round

counter and time indicator and comes complete with a referee who stoops and bends to improve his view, just as in a real bout. Rocky is graphically superb.

It's available now at £29.95.

THE VERDICT

An excellent attempt at turning boxing into a video game.

MIGHTY ROBOT RULES OK?

The graphics may be a bit crude and the representation of the mighty robot's well defended asteroid not quite the same as the arcade version, but the CBS version of that classic space shoot-out, Zaxxon, for the Atari VCS, has all the addictive qualities of the original.

Everyone with a VCS has been waiting for a decent version of this game for a long time — and I don't think you'll be disappointed, despite the graphic limitations of the VCS console.

You won't get the 3D scrolling asteroid when you plug the cartridge into your Atari. Your

jet skims forward over the asteroid head-on and not at an angle as in the arcade game. But the various nasties that inhabit the floating rock — including Mobots, floating gun turrets and Dodger Guns — all come at you at different altitudes, so you'll have to duck and weave as you blast away to stay alive long enough to meet the Mighty Zaxxon himself.

You can judge the altitude of your opponents by the shadows they cast on the asteroid's surface — a nice touch repeated from the original game. You tell your own height by the altimeter at the side of the screen. To keep in the air, you must blast the fuel tanks dotted along the way, as well as avoiding the various barriers which appear to make your life even harder.

When you make it past Zaxxon's first ground force, you'll zoom out into deep space where the mighty robot's fighter fleet is waiting for you. Eliminate as many fighters as you can before you dive back toward the second asteroid and more low flying antics.

If you make it across this asteroid, then you win the chance to meet the mighty Zaxxon face to face. But he's not very pleased about you beating his defence system and is armed with a heat seeking missile.

Only one spot on the giant robot is vulnerable and that's the missile under his arm — destroy the missile and you'll destroy Zaxxon. However, it

Rocky

Rocky

Zaxxon

Polaris

Baseball

GAZETTE

takes several accurate hits to detonate the missile and you'll have to be accurate in order to succeed in your mission. If you don't hit it, Zaxxon will fire his weapon and you are almost certainly doomed. If you do manage to destroy the mighty robot, then you qualify for another crack at the asteroid run — this time at a much faster speed!

The game has six skill levels — each time it takes more hits to destroy Zaxxon. You'll get a bonus fighter each time you score 10,000 points and one or two players can join the fight against the big metal chaps.

As I've already mentioned, the only real spanner in the works is the graphics. I reckon these could be a bit better even on the VCS. Having said that, the game is extremely playable and a good addition to the CBS range for the VCS. Zaxxon is available now at £29.95.

THE VERDICT

At last, a good version of this arcade classic for the Atari.

DEEP SEA DIVING!

Polaris is one of those games that, when you first plug it in, makes you wonder if Atari VCS really has had its day and whether it is time to sell up and buy a Spectrum.

A shame really because, when you make allowances for the crude graphics, it's not really a bad little game.

Not surprisingly with a game called Polaris, the action takes place at sea, though thankfully there are no nukes going off in the game. It is based on the Taito arcade game of the same name and the idea is to sink the planes that are bombing you from above the surface.

Also lurking in the deep are enemy subs which you have to pick off by shooting missiles at them from the sea bed. When you get one of these, an enemy motor launch skims across the surface dropping depth charges which you have to be careful to avoid.

Once you have downed all the craft, the screen changes to a River-Raid style underwater cavern. You scroll up-screen, dodging the islands and banks. In later stages of the game, this underwater cavern is occupied by nasties whom you can shoot for bonus points.

Each time you successfully get to the end of the cavern, you return to the sea battle — but with more and more nasties to deal with.

Polaris is one of the Tiger-vision range of games being imported from the US by Prism. Prices now vary tremendously on VCS games but, if you hunt around, you should be able to pick this one up for around £15.

THE VERDICT

Average to good — not rob your granny for it.

GETTING TO FIRST BASE

If you always wanted to play baseball but didn't have a bat or the know-how, then now is your chance to learn.

Coleco's Baseball cartridge comes free when you purchase the Super Action Controller set. You are taken through all the stages of the game — including fielding, batting, pitching — right up to fully fledged head-to-head baseball.

Unlike cricket, not all baseball players want to be batsmen. I guess it must have been the school I went to, though, as I couldn't help reaching for that long bat.

When you have given the ball a good thump, you run around the bases by moving the grey dial on the control pad.

The graphics, when the ball is hit, are very impressive — showing the ball getting smaller

as it disappears towards the boundary.

The training mode allows you to practise fielding, batting, and positioning your players, but it's quite good fun just slogging away at the ball.

The number of strikes, balls and outs are all shown on screen and, to add to the fun, the game comes complete with an official score pad to enable you to record your strike-outs, walks and double plays. I didn't say it was easy.

The batting score can also be recorded in the pad including singles, doubles, triples and home runs.

Baseball is a splendid bonus to get with the much needed new controllers for your Coleco-Vision.

It's the sort of game that will appeal to several members of the family.

THE VERDICT

Splendid graphics and hours of fun.

A FISTFUL OF STICKS

Joystick Jury does not usually pass judgement on joysticks and other extras, preferring to stick to games but, in the case of the Coleco joysticks, we have decided to make an exception. Coleco's Super Action Controller Set are the most futuristic sticks the jury have ever plugged in.

More like boxing gloves than joysticks, they completely wrap

around your hand like a glove, utilising each finger for a control button.

Twelve control buttons are mounted on the top of the stick to give you the normal game option choices.

There is also the addition of a sliding dial which is used for certain types of movements. In the baseball game, for example, the dial enables you to make your player run around the bases.

The joystick itself has a large red knob mounted on a fairly short shaft. I would have liked this to be slightly longer, as this would give more control.

Some of the games incorporate keypad overlays which make the control keys easier to read in certain games.

The Super Action Controllers are in the shops now at £45.00. Pricey, but then it's not much use having an excellent games machine with a set of useless joysticks.

THE VERDICT

If you take your game playing seriously, you won't want to be without these new joysticks.

THE JURY'S JUDGEMENT

Here's how our Joystick Jurors judge the new games we put to the test each issue. The sentences can be very severe!

Action: Will the cartridge put your joystick skills into the ultimate test — or will you simply fall asleep over your video game centre as the game plays itself?

Graphics: Did the programmer have a very bad case of snow-blindness — or do the graphics really knock your eyes out?

Addiction: Will you miss breakfast, dinner and tea just to play this game? Or would you rather watch Game for a Laugh?

Theme: Have you seen this somewhere before — or is it the most original concept of all time?

Our Joystick Jury foreman would like to point out that any game that gets several 'top joystick' marks isn't really worth plugging in!

Jet Set Willy £5.95

Atac £5.50

owners know we're in the right game

Last year W.H. Smith sold thousands of Sinclair Spectrums, making us one of the leading stockists in the country and the ideal choice for Spectrum Software.

With Arcade Games ranging from Jet Set Willy to Ant Attack we've got action and excitement just waiting for you.

Of course, our range doesn't just stop at games. As leading stockists, we can also offer you an extensive choice of educational software.

What's more, we're constantly updating the range, as new software is released so you can count on us having all the latest, most current programs.

In fact, for the full spectrum, you can't do better than come to the people who know the game.

ATARI VCS OWNERS LOOK AT THESE PRICES!

**WE STOCK A RANGE OF OVER 200 VCS CARTRIDGES
AND 90 OF THEM ARE UNDER £10 - SEND FOR FREE CATALOGUE**

Silica Shop the leading mail order specialists in the Video Game and Home Computer world are pleased to offer you some really amazing bargains. We have a range of over 200 cartridges to fit your Atari VCS, over 90 of these are priced at under £10, so there's plenty to choose from if you're looking for a bargain. You may well be wondering how we are able to offer so many cartridges at such good prices. Well, Silica Shop have now been specialising in Atari game software for over 5 years and with a turnover of £1.5m and over 35 staff, we are able to make bulk purchases at lower prices than many of our competitors. We offer a 48 hour delivery service on all software and Postage and Packing is totally free of charge. Should you wish to obtain further details on our extensive cartridge range, we have a 32 page illustrated catalogue available free of charge. We are currently running a buy one get one free offer on many of the Activision, C.B.S. and Parker cartridges. All offers are subject to availability and full details can be found in our catalogue, so send for your copy now. It is our aim to never be owners club undersold, we will normally match a competitors price providing they actually have the goods in stock. Silica Shop runs an Independent Atari VCS owners club, with regular mailings to over 35,000 members. These mailings include detailed game reviews on the extensive range of Atari and third party cartridge releases. So complete the coupon below and send us your order, or your request for a FREE copy of our catalogue and we will add your name to our Atari VCS mailing list.

Exclusive!

By Matthew Smith—C&VG Golden Joystick Award Winner 1984 *Runs on a 16K Spectrum*

By now, most of you will have played or seen Matthew Smith's latest weird and wonderful Miner Willy epic from Software Projects, called *Jet Set Willy*. But did you know that Matthew had an idea which didn't quite make it into the final version of that number one hit game for the Spectrum? We bet you didn't!

Well, *Computer and Video Games* persuaded our Golden Joystick Award winner, Matthew, to give us an exclusive listing of the missing screen. And now we're passing it on to you — just for the price of this magazine. You can't say we're not generous! Matthew has been slaving away for a couple of weeks to get this game to you — we hope you like it!

As you already know, Miner Willy has been spending the cash he made down the mine and has purchased a vast mansion — complete with a housekeeper and a cook. Maria, the housekeeper, gives Willy a hard time about the mess his guests leave behind after a mammoth party in *Jet Set Willy*.

In our game, André the cook has waited off for the evening without leaving so much as a boiled egg for Willy to munch on! Anyway, our hero marches down to the kitchen to make himself a sandwich and comes face to face with the amazing technicolour man-eating pizzas! GASPI

Can you survive the onslaught of these nasty little doughy monsters? Dare you open Willy's kitchen door? Full instructions are included in Matthew's listing — let us know if you like it!

A Guide to Playing The Hobbit
Finally! A Guide to Playing the most exciting and challenging adventure today, The Hobbit. This book, whilst providing solutions to the problems which were encountered, aims to preserve as far as possible the qualities of challenge and discovery which are so much a part of The Hobbit program. No two games are alike and this Guide will help you discover more about The Hobbit each time you play. **£3.95**

Advanced Spectrum Machine Language
This book is a collection of ready-made Machine Language routines which show how to achieve spectacular effects on the Spectrum. Most of the routines are aimed at creating visual displays that are at the frontier of Spectrum capabilities. Routines include features that have never been published before. This book gives a unique insight into the Spectrum and into a professional's Machine Language programs. **£6.95**

Computer and Video Games Book of Adventure
Adventure games are the most exciting applications of computers to games. The book talks about adventure games: what they are and how to write your own with practical examples for BBC, Spectrum and Commodore 64. **£5.95**

Advanced Spectrum FORTH
With the growing popularity of language, other than BASIC and FORTH in particular, there is real need for information on how to use these languages. This book does not attempt to teach FORTH, but provides the advanced programmer with an in-depth look at this exciting language. **£8.95**

Commodore 64 Sound and Graphics Concise
Easy to follow instructions on programming the superb graphics and sound capabilities of the COMMODORE. Sample programs demonstrate everything the user needs to know to create programs with sprite and character design, music synthesis and many more. **£5.95**

Commodore 64 Machine Language for the Absolute Beginner
If you are frustrated by the limitations of BASIC and want to write faster, more powerful, space-saving programs or subroutines, then this is the book for you. Each chapter includes specific examples of machine language applications which can be demonstrated and used on your Commodore as well as a self-test questionnaire. At the end of the book, all this is brought together into an entire machine language program — from design right through to the complete listing of an exciting, original arcade game. **£6.95**

* GALACTIC SPACE

By MARK MANNS

RUNS ON A VIC 20

WITH 3k EXPANSION

In Galactic Space Academy, you play the part of a recently graduated Space Law Enforcement Officer, looking for promotion. To get your promotion, you will have to be always on your guard — your life may depend on it!

But the waiting is finally over — your chance for promotion has come at last! You have been ordered to find an alien military base and destroy it.

To survive the mission successfully, you must watch out for alien forces and stray asteroids, but don't forget you only have a limited energy supply, so keep a check on the laser cannons and shields.

There are five types of aliens to overcome, as well as three sizes of asteroids. The larger the ship or asteroid, the more you will score for destroying it.

ROMIK PRESENTS

Two more great
games for
the 

POTTIT

TURTLE JUMP

Romik Limited, 272 Argyll Avenue, Slough SL1 4EH

Available from selected branches of:

Dixons, John Menzies, W.H. Smith, Boots, and all good computer stores.

ROMIK

THE HOTTEST GAMES IN TOWN FROM LLAMASOFT

HELL GATE

HELL GATE on the 64 is certainly no REVENGE or HOVER BOWSER, being the VIC 20 code tweaked to run on this system. However, as an offering of a bargain price to those who like an unusual shoot-'em-up, fans of Gridrunner and Matrix should enjoy themselves and the game is challenging to all. Available for Commodore 64 £5.00 and VIC-20 £6.

LASER ZONE

Experience Laser Zone - an utterly NEW style ORIGINAL masterpiece of video game design. Learn its control techniques at once. Feel the EXPLANATION as, after long hours of practice, you control the two ships so that they function as a smooth, co-ordinated team. Feel the raw POWER as you charge for the electric BLITZ and BLAST your enemies into expanding clouds of SPACE. A BLITZ and the combination of a carefully aimed BLAST status into the side of your foe, resulting in a total annihilation required. Available for Commodore 64 £7.50 and VIC-20 £8.

METAGALACTIC LLAMAS BATTLE AT THE EDGE OF TIME

A fast and original game for the unprecedented VIC. Challenging and colorful, with great events and a unique game action and design, this promises to be the most exciting new 3.5K VIC game since the introduction of GRIDRUNNER. Only a year £5.50

GRIDRUNNER

Gridrunner first made quality on the unprecedented VIC. Shoot down the segmented DRAGON tracking the grid. Blazes of the grid and passing. The awesome speed, sword, and graphics from you the last blast available for Commodore VIC. Available for VIC-20 £5.00 Commodore 64 £5.00 Also £6.00/£6.50

ATTACK of the MUTANT CAMELS

These mutants and your mouse arms have used genetic engineering to make themselves into incredibly fast and 3D foot high, medium-sized, laser-spraying death combat! Can you fly your dog, mechanically higher than the mutants? You'll be in luck to watch and starting the game, before they invade the house are caught! You must withstand withering laser fire and alien LPOs. Great action strategy over 20 screen loading and features superb scrolling, superior 1/2 player action and performance. Play this game and you'll never be able to sit at a computer without getting an angry mouse. Super! Awesome mix action! Available for Commodore 64 £7.50.

HOVER BOWSER

A totally original action game for C64 featuring outstanding graphics and a sound track created by a professional Piano Wizard. Gordon Bowser has

survived his neighbor's fire-breathing dragon. After your way through as many of the 10 levels as you can before the pursuing neighbor returns. He'll show you that dog does the neighbor to help you out of tight spots and destroy the garden. By not to push through the next flower fields at leastest your flower! £7.50

REVENGE OF THE MUTANT CAMELS

At last the long awaited sequel to Attack of the Mutant Camels is available. You are controlling a mighty foot high, medium-sized laser-spraying death combat, leading a relative against your own Zebra's onslaught. The game features beautiful smooth scrolling graphics and no less than 42 different attack moves, more than any game in video history. The challenge of the war test for months as you battle to see what's on the next wave! £7.50

the LLAMA has LANDED!

..... and it's breeding fast.

Once upon a time, only Commodore owners could experience the thrill of playing an original game by Jeff 'Awesome' Minter. Lesser mortals could only sit and stare in wonderous rapture at the furry arcade action brought to you by Llamasoft.

BUT NOW THERE IS HOPE.

Dragon owners were the first to see the light of day, but now Salamander Software is pleased as punch to announce that selected titles **ARE NOW AVAILABLE FOR THE 48K SPECTRUM.**

Yes that's right, Salamander is now producing titles for the Spectrum, and the first of these are two great arcade games.

METAGALACTIC LLAMAS BATTLE AT THE EDGE OF TIME

On a forlorn observation post at the edge of the galaxy, the Metallamas wait for a sign of Zzyaxian spaceships. Suddenly the alarm claxons blare, and the furry friends of freedom rush to the fore only to find that there are no attacking spaceships, and that they are under attack from Cyborg Arachnid Mutants and Disgusting Weeviloids.

This classic arcade game, originally developed by Jeff 'Awesome' Minter of Llamasoft, features 1 and 2 player options, spitting Llamas, Cyborg Arachnid Mutants, Disgusting Weeviloids, 99 levels of play. Joystick recommended. Supports Spectrum ZX Interface 2 and Kempston joysticks.

MATRIX: GRIDRUNNER II

It is ten years after the infamous Grid Wars, and humanity is once again threatened by the evil droids, only this time they're back in force with new weapons and new allies.

The awesome sequel to the best selling Gridrunner, Matrix features all the old favourites like Droids and Zappers, but increases the panic quotient by adding Diagonal waves, Cosmic Cameloids, Energy deflexors, the Snitch and more.

Game originally developed by Jeff 'Awesome' Minter of Llamasoft. Joystick recommended. Supports Kempston and AGF joystick interfaces.

In space, only the camels can hear you scream.

What some famous people have said ...

"What's an arcade game"	Aristotle
"Awesome"	Jeff Minter
"I prefer elephants"	Hannibal
"Don't shoot me, I'm only the piano player"	Elton John
"Boing"	Zebedee

Please add 50p P.&P. to all orders. Send A5 SAE for full catalogue.

Again all the winning features of the Pro 1000 but incorporating true craftsmanship plus large 1 1/4" control knob for comfortable play • Unique tapered shaft for maximum sensitivity • Dual independent fire buttons • Nylon covered steel shaft for maximum robustness

KEMPSTON JOYSTICK INTERFACE FOR THE ZX SPECTRUM

Allows the use of any Atari/Commodore type joystick with the popular ZX Spectrum computer. With well over 100 games on the Spectrum now compatible with the joystick this is a must for any Spectrum owner who wants the power of a joystick added to the power of the Spectrum. Simply plugs into the edge connector at the back of the Spectrum. No modifications necessary.

Some games you can buy were produced before Joysticks were available for the ZX Spectrum. With the aid of Kempston conversion tapes these games can now be played with any of the Kempston range of joysticks.

CONVERSION TAPE I

- Converts: Horace Goes Skiing, Hungry Horace, Flight Simulation (Sinclair), Arcadia, Penetrator, Spectres

CONVERSION TAPE II

- Converts: Orbiter, Escape, Tank Centipede, Spectral Invaders, Cruising on Broadway, Frenzy

CONVERSION TAPE III

- Converts: Ab Diddabums, Jumping Jack, Molar Maul, Androids, Horace And the Spiders, Space Invaders, Winged Avenger, Muncher.

ALL £4.95 each

CASTLE OF DOOM

RUNS ON A COMMODORE 64

BY MELBOURNE HOUSE

Melbourne House, the makers of the well known games, Hobbit and Penetrator, have recently launched a pair of tapes containing over 30 Basic programs for the Commodore 64, called the 64 Super Cassettes.

Each tape contains 15 games written by Clifford and Mark Ramshaw entirely in Basic. Castle of Doom is a fairly typical example of the very high standard of all the programs on the tape and we are very happy that we have been able, together with Melbourne House, to print this listing to give a small taste of things to come.

The game is very similar to the arcade game, Shamus. You are trapped in a castle filled with hundreds of rooms. Armed with only a gun, you have to fight your way through all the monster-infested rooms until you meet the dark castle's owner. Only after killing him will you be freed from the Castle of Doom.

The program, although written in Basic, is remarkably fast and the graphics rival even the best that professional software can produce. With CBM software costing £7.00 upwards, the new 64 Super Cassettes seem very good value.

Punchy

- Full game story
- Exciting graphics
- Exciting sound effects

The Game

BASTY PUNCH has landed **AUDY** away in the Punchy & Judy house. You must rescue her by giving brave **BODDY** the policeman across the stage.

To achieve success you must, amongst other challenges, leap over the obstacles, land on a flying croquet and **ROCK THE BASTY**.

All the well known characters from the traditional Punchy & Judy show make an appearance in this unique game.

The graphics and speech combine to produce one of the best programs available for the 48K Spectrum.

NEW ORIGINAL GAMES FOR THE COMMODORE 64

• **NIGHTMARE PARK** is in fact a compendium of 14 games. The task of the user is to gain as many points as possible travelling through a maze beset by obstacles at every turn. These infuriating obstacles are overcome by a combination of skill, sharp reflexes or by sheer good luck making Nightmare Park a suitable game for all ages. **PRICE £7.99**

• **DOTS & BOXES** is an intelligent game where the user and the computer take turns in completing boxes by drawing a line between two dots. The aim of the game is to win the most boxes whilst skillfully minimising the number of boxes given away to the computer. **PRICE £6.96**

• **HEXAPAWN** For strategic and persistent play. The opponent (computer) has no initial strategy but is programmed to learn from the user's wins to improve its own strategy. **PRICE £5.95**

• **CHOPPER LAND** Your chopper is chartered to transfer goods from your base and land SAFELY. An exciting new game full of surprises. **PRICE £7.99**

TURBO CHARGE YOUR SPECTRUM

Outperforms any Spectrum interface

The unique Turbo interface from Ram gives you all these features – and more – in one unit:

- * A variety of interfaces including: Rom cartridges, two 9-way D plugs for standard joysticks, PLUS full expansion bus at rear.
- * Compatible with Kempston and Protek protocols.
- * Works with latest Quickshot Mk II auto rapid-fire joysticks!
- * Choice of Rom cartridge or tape cassette software.
- * Instant program loading with cartridge software.
- * Built-in power safety device – unique to Ram Turbo.
- * Full one year guarantee.
- * Immediate availability – 24 Hr despatch on receipt of P.O./credit card details (cheques – seven days).
- * Incredible value – only £22.95.

So don't wait around – simply complete the coupon and send it to us today.

Or call our credit card hot line on 02514 25252. (Access and Visa welcome).

Ram Electronics (Fleet) Ltd, 106 Fleet Road, Fleet, Hampshire GU13 8PA.

Please send me:

BY A. GOODHALL

RUNS ON A TI-99/4a

WITHOUT EXTENDED BASIC

Texas owners, prepare for the most thrilling car ride of your lifetime.

Your hands are beginning to itch. You can feel the pressure rising. The roar of the engine fills the cockpit — the chequered flag is raised ... and you're off!

You are driving the world's fastest car in the most illustrious race of the Grand Prix season. As a new hot shot driver, at the top of the championship table, you are the envy of all the more experienced racers.

They have become so jealous of your success they are plotting to finish you career off once and for all and deny you the chance of capturing the championship crown.

The screen displays a lap counter and a hi-score feature as well as a bird's eye view of the track. If you do come a cropper on one of the corners, an ambulance will come to your rescue. But — be warned — even your car can't take too many crashes.

ILLUSTRATION: JOHN HIGGINS

Are you fed up with fighting aliens from outer space or battling with dragons in some dark, dank dungeon?

John Ridealgh has written a game for C&VG that stars a monster which is a little closer to home, but no less scary — the tarantula. Spider Grid is a version of the arcade game, Genesis.

The game is played on a web spun across the mouth of a deep mine shaft. You have to pick up the squares that litter the edge of the shaft, but keep a close eye out for Boris the spider. He is always on the look out for unwary adventurers to snap up.

To make matters worse, the web is littered with the skulls of Boris' previous victims and one wrong step will send you tumbling down the mine.

RUNS ON A DRAGON 32

WITH ONE JOYSTICK

BY JOHN RIDEALGH.

Try pulling a stunt like this on your Spectrum

Leap on a moving train... jump from carriage to carriage... duck under fast-approaching bridges.

But before you do anything, make sure it's with Sinclair's new action-packed game - 'Stop the Express'.

That way, you can try dramatic feats like Buster Keaton's - without risking your neck!

'Stop the Express' is one of five exciting new games from Sinclair. Its graphics are superbly fast and sharp. The action is non-stop. And the challenge is a very tough one.

On top of a racing express, you're chased by knife-throwing bandits. And inside the express, there's even more trouble.

Will you ever get to the front and halt the train? Or will you be well and truly bumped off?

All five new Sinclair titles - Stop the Express, Bubble Buster, Zipper Flipper, Eric and the Floaters, and Driller Tanks - are for a 48K Spectrum. You'll find them in the shops - today.

At only £5.95 each, they're destined to be big stars on the small-screen!

Selected Sinclair software lines are available from WH. Smith computer stores, larger branches of Boots, John Menzies, Greens and most other software stockists nationwide.

Sinclair Research Ltd, Camberley (0276) 685311.

© Sinclair, ZX and ZX Spectrum are trade marks of Sinclair Research Ltd.

sinclair

To date, Atari's most astonishing game is Pole Position... If you are only going to buy one game, then this is the one you should get.

COMPUTER & VIDEO GAMES.

...Pole Position gives a very strong sense of speed as you hurtle round the track. The super-realism of the three-dimensional effect adds a lot to the game. It is a great graphics demo.

PRACTICAL COMPUTING.

Brilliant!

WHICH MICRO? AND SOFTWARE REVIEW.

...a terrific version of the arcade motor racing game...graphics are superb...sound, too is very good as brakes screech and engines rev-up.

PERSONAL COMPUTER GAMES.

Exciting, exhilarating, excellent, Pole Position takes the lead as the best Atari race game around.

PERSONAL COMPUTER NEWS.

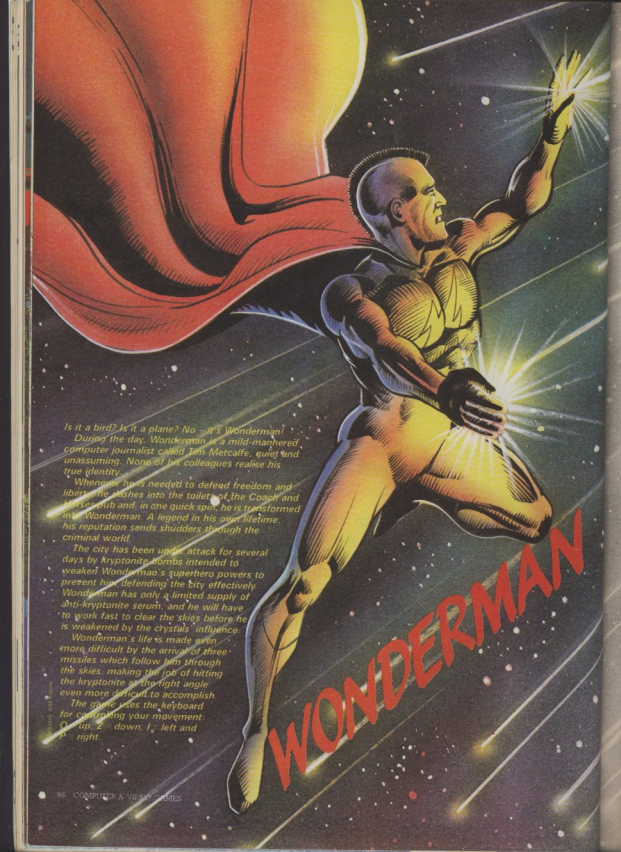

What can we say?

We're overwhelmed. Though we should just add that with Atarisoft, you can now play Pole Position* on the Commodore 64, BBC and Spectrum computers, as well as on all Atari® systems. Oh, and we're giving away free a Grand Prix kit and full colour wall chart with every game.

POLE POSITION
from **ATARI**SOFT™

LOOK OUT FOR OTHER LEADING COMPUTER GAMES ON ATARI/ISOFT. PRICES START FROM £14.99. *TRADEMARK OF NAMCO. ® TM ARE TRADEMARKS OF ATARI INC.

A comic book style illustration of Wonderman, a superhero with a yellow suit and a red cape, flying through space. He is holding a glowing yellow energy ball in his right hand. The background is a dark blue space with stars and streaks of light. The word 'WONDERMAN' is written in large, red, stylized letters across the bottom right of the image.

Is it a bird? Is it a plane? No - it's Wonderman!

During the day, Wonderman is a mild-mannered, computer journalist called Tim Metcalfe, quiet and unassuming. None of his colleagues realize his true identity.

Whenever he is needed to defend freedom and liberty, he dashes into the toilets of the Conch and horses pub and, in one quick spin, he is transformed into Wonderman. A legend in his own lifetime, his reputation sends shudders through the criminal world.

The city has been under attack for several days by kryptonite bombs intended to weaken Wonderman's superhero powers to prevent him defending the city effectively. Wonderman has only a limited supply of anti-kryptonite serum, and he will have to work fast to clear the skies before he is weakened by the crystals' influence.

Wonderman's life is made even more difficult by the arrival of three missiles which follow him through the skies, making the job of hitting the kryptonite at the right angle even more difficult to accomplish.

The game uses the keyboard for controlling your movement:

O - up, Z - down, L - left and

P - right.

WONDERMAN

AGF PROGRAMMABLE JOYSTICK INTERFACE

MICRODRIVE
COMPATIBLE

for
Spectrum
or **ZX81**

Works with QUICKSHOT II & TRACKBALL

Recognised as the only true Hardware Programmable joystick interface this product offers all the features associated with such a design.

You can use any Atari-compatible joystick controller with any software for your Sinclair Spectrum or ZX81, not just those with a joystick option.

Movement of the joystick is recognised by the computer exactly the same as pressing the appropriate control keys, and can therefore give the most immediate response to that movement. The hardware programmed design works with all possible key-reading methods, both BASIC and Machine Code.

Eight directional movement, with or without the fire button being pressed, can be achieved by only programming the left, right, up, down and fire keys required by the game.

Programming is achieved by a two-digit code, which is looked up on the Programming Card supplied, for each direction and firing button. These two numbers are then selected on a pair of leads which are clipped onto appropriately numbered strips on the interface.

Once configured this can be marked onto a Quick Reference Programming Card for storing with the game. As the programming is not power dependent the interface can be immediately used when next switched on.

The keyboard remains fully functional and can be used simultaneously with the joystick.

An integral rear expansion connector means there is no need to remove the interface to connect other peripherals.

NB. A recent design improvement now means that the AGF Programmable Interface works with the new Quickshot II rapid "Auto Fire" feature.

KEY FEATURES

- Programmable design gives TOTAL software support.
- Accepts Atari, Competition Pro, Wico, Starfighter, Quick Shot, Le Stick etc.
- Rear extension connector for all other add-ons.
- Free demo program and instructions.

PACK CONTENTS SUPPLIED

- Programmable Interface Module as illustrated, complete with clip-on programming leads.
- Self adhesive programming chart detailing how to define which key is simulated by UP, DOWN, LEFT, RIGHT, and FIRE.

- One pack of ten Quick Reference Programming Cards for at-a-glance setting to your games requirements.

- 12 months guarantee and full written instructions.

OMELETTE

BY ALAN DOWNS

RUNS ON AN ORIC 1 IN 16K

The Chef's away and a lot of things are cooking in the kitchen!

He has disappeared and left the gas on full blaze in the kitchen. Your only chance of survival is to throw eggs into the hot frying pans to cool them down.

Every time you hit one of the pans, you are awarded a piece of rope which, when it's long enough, you can use to climb out of the very hot oven and turn off the gas. However, if you happen to miss the pans and let the egg hit the ground, the omelette monster lurking in the dark corners of the kitchen can add one step to his already fast growing ladder.

The difficulty of the game is determined by how hot the cooker can become before it blows up. In skill level one it is 180 degrees but in the second, it is only 130 degrees.

VARIABLES

P1 — Pan 1's co-ordinates

P2 — Pan 2's

X&Y — Chick's

L — Ladder's

LL — Climber's

co-ordinates

CT — Temperature

counter

SK — Skill level

MDS — Melody string

Illustration: Terry Rogers.

CURRAH **μ** **SLOT**

Expandable Motherboard System for ZX Spectrum

Have you ever plugged a brand new peripheral into your Spectrum and then found you couldn't plug anything else in?

The **CURRAH μSLOT** will help you solve your problems.

Now you can connect your **CURRAH μ SPEECH**, your printer connector, your ZX Interface 2 or other accessories into either of the available slots — you can even add **μSLOTS** together to expand your system further! And naturally, **μSLOT** can be used on the back of Interface 1.

Even if you only have one peripheral for your computer, **μSLOT** will protect your Spectrum's edge connector from wear and tear.

Moulded in black plastic, **μSLOT** is styled to complement your Spectrum and its accessories. It comes in its own distinctive packaging, complete with full instructions for use.

ZX Spectrum, ZX Interface 1 and ZX Interface 2 are trademarks of Sinclair Research Ltd.

Once again **CURRAH** design brings you the best in computer add-ons at a truly competitive price — £14.99 inc. VAT. Look out for **μSLOT** as it becomes available in retail outlets nationwide — or use the order form below.

To: MicroSlot Offer, P.O. Box 1, Gateshead, Tyne & Wear, NE8 1AJ

MISSILE COMMAND

You are the last hope for your planet. Hundreds of alien races have entered the atmosphere and positioned themselves in orbit around your world.

Your race has been wrongly blamed for murdering the President of the Galactic Federation and the Federation is preparing to wreak a terrible revenge attack on your planet.

Using a moving sight, you must track down the incoming alien ships and air burst a nuclear weapon in their flight paths. There are four waves of aliens and the alien changes every three screens.

After gaining 1500 points, you receive an extra life and when each screen has finished you are awarded bonus points. Full instructions are included in the listing.

This is a version of the arcade game and has since become a classic. The highest score we've managed in the C&VG office is 20,000. Do you reckon you can beat that? If you do, let us know.

R&R

SOFTWARE

means value

At R&R we believe that value comes first, and we make it our business to ensure that we provide good quality programs at realistic prices ... for your enjoyment.

ALL ARCADE GAMES NORMALLY HAVE CHOICE OF KEYBOARD OR JOYSTICK CONTROL.

Should you have difficulty in obtaining our products from your local Dealer please send cheque or Postal Order indicating titles required, for return of post service.

CHOPPER X-1

For any ZX Spectrum

You command the Spectra-Chopper X-1. Surviving your mission is to register invading forces and save the earth. An action-packed arcade game in full machine code.

RRP £5.50

GALAXY WARLORDS

For any ZX Spectrum

A fast action machine code space game in which you defend your planet as Galaxy Warlord against attacking enemy clankers. With your gun, ring and rocket, you decide. The enemy never seem to give up! Full colour action graphics and sound too.

RRP £5.50

JUNIOR ARITHMETIC

For any ZX Spectrum

An excellent educational program for 6-10 year olds. The fun way to learn and practice Addition, Subtraction, Multiplication and Division. Windows are corrected and expanded, along with a running total of correct answers.

RRP £4.95

SPECTIPEDE

For any ZX Spectrum

Enjoy the thrill of this full machine code arcade game. Ruffin to keep the Spectipeed at bay but worth out for every upgrade to your system which is out to get you for 1 or 2 players with top score and on screen high score feature.

RRP £5.50

GOLF

For any ZX Spectrum

Show a game of golf in the comfort of your own home. With the choice of a 9 or 18 hole course and the challenge of Fairway, Rough, Trees, Bunkers, Green & Sand. Displays are in full colour graphics with full score cards. No two games are alike!

RRP £3.75

GNASHER

For any ZX Spectrum

The famous arcade mark game with fast machine code action, excellent graphics, colour and sound. Set up in the pits before the GNASHER you or beat them to an energy pit which will allow you to eat their robots of death time fun with on screen scoring and high score table. New opportunity for you!

RRP £4.95

STAR TREK

For ZX Spectrum only

One of the original computer space games, but this program has many up-dated features. Normally only found on larger computer versions. Send yourself as Starship Commander as you mission takes you to the outer reaches of the Galaxy to protect Federation Space. The Starship and your own 'Laser' weapons.

RRP £4.95

THE ZARAK SOFTWARE COURT
HAS DECIDED THAT C.R.L.
PROGRAMMES ARE TOO GOOD
FOR EARTHLINGS.

'An extract from the Zarak's Software Court Ruling'

CRL programs are so good it has become necessary for us to eliminate the entire range of CRL's software programs, from their no. 1 seller 'Glug Glug' to the mind blowing 'Omega Run' which are available for most of the popular earthling computers. Programs must be vapourized at Boots, Menzies, W H Smith's, Spectrum Group and any good computer shop — we must do it soon — tomorrow might be too late!

CRL
THE DREAM MAKERS

CRL House, 9 Kings Yard,
Carpenters Road, London E15 2HD.
Tel: 01-533 2918

Tension mounts as you sit strapped into the cockpit of your high-powered Formula One race car waiting for the start of the Grand Prix. The noise of the engine is deafening as the start light flashes green. You flatten the accelerator pedal to the floor and your car blasts away from the starting grid at the speed of a guided missile!

The closest most of us will come to the ultimate challenge of driving a Formula One car will be playing a race game on a home computer or sitting down in one of those monster arcade

Martin Brundle knows just what it's like to drive one of these high-tech machines. He is a rising star in the world of F1 racing and this season is driving for the British Tyrrell team. He finished fifth and scored World Championship points in his first Grand Prix race in Brazil a few weeks ago.

the pit stop feature better than the racing part of the game really!"

Rating: (**)**

VIDEO GRAND PRIX

Program Name: Enduro

System: Atari VCS

Manufacturer: Activision

Price: £29.95

This VCS cartridge had the C&VG team glued to their joysticks when it was first released. You drive your Atari special in a 24-hour endurance race through day and night, snow and fog. You have to pass a certain number of cars during each lap — or day — to keep in the race.

Martin Brundle, Formula One driver, Tyrrell team

This new Commodore cartridge for the 64 takes you to the world famous Le Mans circuit for the equally famous 24-hour endurance race. You drive through day and night time sequences

the ULTIMATE

Computer and Video Games asked Martin to step into the turbo-charged C&VG special and put motor racing simulations for some top home computers and video game systems to the ultimate test. Just how true to life are they we asked? Here are Martin's verdicts on the best racing games.

VIDEO GRAND PRIX

Program Name: Pitstop

System: ColecoVision

Manufacturer: Exidy

Price: £29.99

This brand new cartridge for the Coleco features racing and a pit stop — just like the real thing! You have to keep an eye on tyre wear and your fuel as you race. If you need more tyres and fuel, you pull into the pits and control a pit crew to carry out the refuelling and tyre changes. There are several game variations and different tracks to race on — a driving game with a new twist.

Martin's verdict: "You play the part of driver and team manager in this game. You have to conserve the car to reach the finish which is very relevant to Formula One racing these days. What's very realistic about it is the way you have to look up from the track to watch the read-outs on the screen — for instance, the cursor which shows you where you are on the track — just like looking out for pit signals! Calling the tracks different names is a bit silly really, as they bear no relation to real tracks. I'd like the controls to be a bit more responsive — the joystick was better than the plug-in steering wheel module. It's also realistic in that you have to keep an eye on tyre wear. I liked

Martin's verdict: "It sounds like you're riding a motorcycle rather than driving a car! But the graphics are quite good and the game is quite challenging. The joystick response is good — but the car doesn't behave like a real

and face hazards like ice and tricky sections of the track like the Esses — a series of nasty 'S'-bends. If you hit another car, you must head for the pits — to be repaired and refuelled. There are several skill levels and you have to

Martin at the wheel of the TX-1

one when you hit the snow!"

Rating: (*)**

COMPUTER GRAND PRIX

Program Name: Le Mans

Computer: Commodore 64

Manufacturer: Commodore

Price: £10.00

use the Commodore paddles to control the action.

The "track" scrolls up the screen and you guide your computer race car around the various hazards which appear.

Martin's verdict: "The night driving feature is clever — but I was soon bored with it. The pit feature doesn't really give you much variety. It's all a bit the same."

Rating: (+)

COMPUTER GRAND PRIX

Program Name: Pole Position

Computer: Atari 400/800

Manufacturer: Atari

Price: £28.95

This is the classic racing game based on the now legendary arcade machine which you'll still see attracting big crowds at arcades and which has spawned Pole Position II and many computer game variations. You have to race your car on a qualifying lap in order to get into the Grand Prix proper — chasing and passing as many cars as you can along the way. Here at C&VG we quite enjoyed playing this game — but what did the real racing

This is the game that's riding high in the C&VG/Daily Mirror charts and it has several features including a choice of track to race on and a choice of three cars to race in! It has a sophisticated screen display and colourful graphics plus a fastest lap time feature. It also has a pit stop feature and you can choose how many laps you want to race. Martin selected the Silverstone track to race on — a circuit he knows extremely well — to judge this game.

Martin's verdict: "This is really pretty impressive, given the limitations of the keyboard but you need a few more fingers! You really have to set the car up properly to take the corners. You also have to change gear and keep an eye on your revs. I was wondering why the car wouldn't pick up, then I realised I was in the wrong gear! You have to use the brakes carefully going into the

we thought we'd take him for a quick burst on TX-1 which must be the ultimate in arcade motor racing simulations right now. TX-1 is a three-screen 3D graphics stereo sound monster and we found one lurking in The Family Leisure Centre in Old Compton Street. Martin slipped into his race gear so he could get to grips with the machine which is currently attracting more interest than the laserdisk games at this particular arcade.

Atari's TX-1 offers a greater challenge than any other racing game currently in the arcades. The further you get into the game, the more circuits you get to drive on. Ultimately, you could be roaring around race tracks like Monaco, South Africa and Spain. The graphics are amazing — there's really no other word for them! And the sounds... well, we'll let Martin tell you

DRIVING TEST

driver think of Pole Position?

Martin's verdict: "This has the most realistic representation of the track out of all the games I've seen today. The noise when you hit the kerbing is quite realistic — and I like the noise when you pass other cars. However, the car control is not that good."

Rating: (**)

COMPUTER GRAND PRIX

Program Name: Chequered Flag

Computer: Spectrum

Manufacturer: Psion

Price: £6.95

corners and there are markers to show you when the corner is coming up — something that's missing in the other games. However, the steering response isn't that good. The track is loosely based on Silverstone — but the chicane is missing. Again, there are no Armco barriers. I'm surprised that none of the games have these. Wherever you go in the world, you are racing between crash barriers!"

Rating: (****)

We thought Mr Brundle might be getting an itchy throttle-foot after all this messing around with fiddly joysticks and keyboards, so

Martin tries out one of the top computer racing games

all about those sounds.

"Brilliant! It's the nearest you'll get to the real thing, short of getting into a proper car! The sound is amazing — especially when you go through the tunnels — and you get vibrations through the back of the seat which is a sensation you get when driving a real F1 car. You can slide the car through

the corners and, when you bump wheels with other cars, not only do you hear the right sound, you also get nudged over a bit on the track. The steering is very precise and the accelerator really appears to work. The graphics are great too! How much do they cost?"

We finally managed to prise Martin out of the TX-1 and remind him that he had to be in Italy the next day ready to take his Tyrrell on a test drive at the Imola circuit. Perhaps his session on the TX-1 will help him win his first Grand Prix? We hope all C&VG readers will be cheering him on as he races around the world this season!

The rating system: We asked Martin to rate the games out of a possible top score of five stars, based mainly on how close the game came to real racing.

THE NEW COMPUTER GAMES MAGAZINE THAT BREAKS ALL THE RULES

Attention all you pixel-packers, midnight hackers and binary-bustin' bozos! Gorf's gift to gamesville has just hit the streets. Big K's the name and Big K's the game – it's a new magazine that's going to be music to your micros. Whatever Big K gets in its sights – technical, tactical or just plain old topical, don't expect anything typical. Big K **plays** it different and **says** it different. We're not afraid to shoot from the hip – and we're always hip when we shoot! We've a no-holds-barred approach to arcade strategy and adventure that'll have your CRT's tingling. Key in to Big K now for a magazine that puts news, reviews, programs and hardware under your fingertips. **After your first byte of Big K... the game will never be the same.**

THIS ISSUE: Modern Living – access the world through your micro and telephone – Big K makes the right connections.

• Win a full-sized **BATTLEZONE** arcade game in Big K's extravagant competition.

• What's all the fuss about? Big K examines the 68000 wonderchip.

• Atari 800XL review.

• 7 games programs for Commodore 64, Vic 20, BBC, Spectrum, ZX81, Oric, Atari.

• Atari graphics – read Big K's special feature.

Plus – Arcade Alley, dozens of games reviews, expert technical features, lots of fun and lashings of colour.

A few months back I looked at some of the factors which anyone thinking of buying a chess computer should bear in mind. Now, on the assumption that everybody who read that article is bound to have bought a machine, I am going to look at ways of getting every last drop of enjoyment out of it.

New owners of chess computers are easy to pick out — they are the ones with the bleary red eyes. Again and again people tell you how their machine is infinitely stronger and more fascinating than they ever thought it would be and that they have been up till the small hours every night since they bought it. It is very easy for those of us closely involved with chess computers to get blasé about machine which five years ago would have been, literally, incredible.

Just how good modern chess computers are can be seen in these two positions from last autumn's World Championship semi-finals. In both of them a CONCHESS computer, on one of its top levels, reproduces a match winning sacrifice by one of the very best players in the world.

In position A from the first Kasparov v Korchnoy game, Korchnoy played and CONCHESS plays this neat little combination: 1... N x P! 2 R x N R x B. 2 B x N would have come up against 2... P-ON4 winning back the piece. Either way Black is a pawn up and winning.

The second example, position B, from the Smyslov v Ribli match, is a real blockbuster. Smyslov played and CONCHESS plays the following brilliant sequence:

- | | |
|--------------|-------|
| 1. R x Pch!! | P x R |
| 2. Q x Pch | N-B2 |
| 3. P-Q6ch | R x P |
| 4. N-Q6ch | R x N |
| 5. Q x Q | |

and suddenly White has won a position.

The first example was simple, although still easy to miss if you are not a top flight computer, but the second really is something out of the ordinary. A lot of experienced commentators thought that Smyslov had overreached himself until he produced his series of thunderbolts.

Your computer won't produce something as good as that in every game (neither will you!), but there is always that chance. It's a peculiar fact that computers have good and bad days just as much as humans do. I have certainly seen a chess computer losing to a child on one day and holding a Grand Master for most of the game the next.

As time goes by, your chess is sure to improve because of the regular practice you are getting against your computer. When you find that you can give the machine a reasonable game at most levels, you should seriously consider joining your local chess club. This will give you the chance to broaden your experience and style by playing against

CHESS COMPUTERS.

your move

Chess is still a firm favourite among computer gamers and we like to keep you in touch with what's going on in the world of the chequered board. Our friendly chess expert, Jonathan Calder, has been looking at ways to make the most of chess computers — whether you're lucky enough to own one or can get to grips with a chess machine at your local chess club.

a whole range of different players. Your computer might appreciate it too!

When you do join a club, you will really become aware of one of the great advantages of a chess computer. You play when you want to and **only** when you want to. For some reason, chess matches always take place on evenings when there is something else you want to do but when you do fancy a game — say on a wet Sunday afternoon — you can be sure the club won't be meeting.

Once you have joined a club, you will soon find them asking you to play in matches against other clubs. Big clubs run several teams and small clubs are almost always short of players, so you really don't have to be a master to get a game.

As an alternative to playing in the evenings, there are tournaments which take place over weekends. Here you will play five or six games and have the chance to see some very strong players in action in the top sections. Whichever way you choose to play your competitive chess, do not think that your computer will no longer be of use to you.

There are many ways a chess computer can help the more serious player. The most important is still in providing him with practice — regular practice and at times when he cannot get it any other way. For the serious player, the kind of practice is very important too — even friendly games must be taken seriously.

If you are playing against a computer purely for fun, it makes perfect sense to scrap a game and start a new one if you look like losing or get bored. When you are practising for competitive play, this is the last thing you should do. Just as many points are won by dogged defence or by patient manoeuvring as are won by brilliant attacking play. Of course we enjoy playing aggressively the most, but the serious player needs experience of all types of play.

A training method favoured by almost all strong players is the playing of five minutes or 'blitz' chess. These are games where each player has five minutes to complete all his moves and the first player to run out of time loses. They provide a very concentrated form of experience as you can see your good (or bad!) judgement rewarded on the board in front of you in a matter of seconds. This helps a player develop his chess instincts — just as important as calculating ability in playing good chess.

When you start to play serious chess, you will soon realise the importance of the first few moves and the value of being properly prepared for the opening. If there is a line that you always get bad positions against or one you know to be a particular favourite of your next opponent in the club championship, then why not use your computer to help your combat it? You can play as many games as you need, against the opening you are worried about. Your computer will not protest that it is bored with the opening and you can try half a dozen plans until you find one you are happy with.

Computers have their uses at the

other end of the game as well. While endings are easily the weakest point of a chess computer's game, because ironically any competent chess player can calculate further than a computer on a near empty board, that doesn't mean they are useless from the training point of view. There are a number of rules which just have to be learnt from books but, once you have learnt them, it's very instructive to try implementing them

against an opponent. If the computer plays a move that is wrong according to the book, it's up to you to prove just why it is wrong by winning the game.

You should not go away with the idea that computers are complete idiots at endings — see what a nasty shock CONCHESSE gave to its fellow computer Mephisto in position C.

It comes from a computer tournament run by the Surrey-based chess master, Mike Basman. After Black played the plausible 1... K-N4, CONCHESSE replied 2. P-N4! and, after Black had taken the pawn, White's KRP was free to steam up the board and the Black King was too far away to catch it. Easy to see if you know a bit about endings, but a lot of players would miss it.

So if you are just looking for fun from chess or if you want to play the game at competitive level, a chess computer has a lot to offer you. The better you play, the more you get from it.

One final thought which you may or may not find consoling. If your computer does help you to improve to the stage where you feel you have outgrown it, you can be sure that by then there will have been enough developments in programming and in hardware technology to boost your machine to new heights!

Discover these new games for ATARI...

Now all Atari owners can appreciate these great games from Creative Sparks, some of which were previously only available at £30.

Experience the excellent animation, stunning sound effects and music in games which stretch your Atari to the limits.

Priced from only £7.95, all Creative Sparks Atari games are available from your usual supplier, or direct from the address below.

All action game with strong strategic element. Roll down the middle of the road in a beline for the enemy fuel dumps and you won't make it past the first bridge.

- This 100% machine code game features:
- Superb sound and graphics.
 - Smooth action scrolling screen.
 - Separate map screen to plan strategy.
 - Five pre-selectable skill levels.
 - One or two player game.

Requires 32K RAM expansion. Cassette £8.95

Defend your castle against the rampaging hordes of attacking Orcs, with broadswords, rocks and boiling oil. This 100% machine code game benefits from superb sound and graphics spread over four screens of exciting action.

One, two, three, or four player game. High score feature.

Six pre-selectable levels of play. Requires 16K RAM expansion.

Instant plug-in cartridge action. £9.95

Interesting fairground scenario where you must save the ferris wheel passengers from Butcher Bill's missiles, and the roller-coaster riders from Ruthless Rick's bombs.

You will need to be quick to keep up with the action in this 100% machine code game which features first class sound and graphics over two screens.

One or two player game.

Instant plug-in cartridge action. £9.95

Attack and destroy all enemy shipping.

That is your brief in this exciting game of strategy. Can you stand the nerve tingling action spread over three screens provided by this amazing game.

Already a big hit in the USA.

Superb scrolling screen in periscope mode and realistic sound effects.

Nine pre-selectable levels of play.

High score feature.

Requires 32K RAM. Cassette £8.95

Based on the hit movie "War Games". Using both strategy and good shooting destroy the incoming missiles and avoid the holocaust!

An amazing game with superb scrolling landscape when tracking missiles.

High tension play when trying to crack the code.

Keyboard or joystick control.

One player game.

Requires 32K RAM. Cassette £8.95

GERMAN 32K Cassette/Disk Designed by Dr Michael
M Gruneberg. Program by Steven A Riding. With the
use of a unique blend of visual imagery and psychology,
it will teach you the basic grammar and more than 350
German words in only 10 hours! Supplied complete
with separate audio pronunciation tape. £12.95

JET-BOOT JACK 32K Cassette/Disk by Jon Williams.
JET-BOOT JACK, space-age jogger, takes you on a
chase through the vinyl vaults of the PRESSING
PLANT!

BATTY BUILDERS 16K Cassette/Disk by Mamel D
Cabalero. Play BATTY BUILDERS and indulge
yourself in one of the best non-violent constructive
computer game programs ever written.

NEPTUNE'S DAUGHTERS 16K Cassette/Disk by
Mark J Taylor and Michael Hedley Designed by Ralph
Frumin. Our 1st multi-screen arcade adventure takes
you beneath the ocean's waves in search of
NEPTUNE'S DAUGHTERS, held captive by the evil
Sea Serpent!

THE ATARI GRAPHICS WIZARD! 16K Cassette/32K
Disk by Steven A Riding. THE ATARI GRAPHICS
WIZARD introduces you to the wonderful world of
ATARI PLAYER (SPRITE) and CHARACTER
GRAPHICS! Written totally in Machine Code. It
contains: PLAYER EDITOR (SPRITEMAKER);
CHARACTER EDITOR, MULTICOLOUR
CHARACTER EDITOR.

ATARI 400/600/800 OWNERS MIDLAND GAMES LIBRARY

Do you want to join a long established library?
Est. 1982.

Are you looking for a fast efficient and friendly service?

Would you like to select from over 700 programs;
cassettes, cartridges, discs and utilities and
educational?

Would you appreciate approximately 35 new additions
per month?

Are you interested in interactive club schemes such as
Adventure helps, newsletters, etc?

Before writing to the rest, try the BEST.

2 games may be hired at any one time.

We buy many of the popular games in multiples of 5
or 6 to give all our members a fair choice.

Special introductory offer for new members; first two
games free of hire charges.

Send large SAE for details.

M.G.L.

48 Read Way,

Bishops Cleeve, Cheltenham

(0242-67) 4960 6pm-9pm

All our games are originals with full documentation

You can't see the one
that's watching you.

Death Star

Three-dimensional terror from RABBIT SOFTWARE

RRP £5.99 inc.VAT
For IBM 64 & ZX Spectrum 48K

We've just won an award for blowing a

g away the cobwebs.

You know the story, the Micro you thought would give endless hours of fun soon becomes a five minute wonder. You get bored and dump it on the shelf to gather dust.

With the introduction of Micronet 800 you now have access to a vast mouth-watering menu of facts, figures and fun.

If we said it was a major breakthrough in microcomputer technology we wouldn't be going over the top.

Just recently at the Which Computer Show we picked up the prestigious RITA award for Systems Innovation of the Year.

RITA is the 'Oscar' of the computer industry. Judged and sponsored by the major forces in related institutes, associations and publications.

Incredibly all it costs is just a pound a week to take up a subscription to the Micronet system. Plus, for most of you, a local telephone call whenever you want to connect up.

Then you've got 30,000 pages at your fingertips, including Computer News Flashes, all that Prestel has to offer, and Micronet's SwapShop. Where you can buy anything from joysticks to second-hand computers.

Interact with our daily news update. You can even take over the world; competing against hundreds of other subscribers on the system, in our 'Starnet' game.

If we haven't won you over with that then try downloading our wide selection of free games and other tele-software.

Naturally, you can run household accounts, manage businesses, talk to other subscribers nationwide using the system.

The list is endless and so is the fun.

The only addition you need to connect with Micronet 800 is a modem unit.

Apart from that all you'll want is a pen to fill in the coupon for more information. Then we'll have you linked up in no time.

Before the dust settles, in fact.

Please send me the full facts about Micronet 800.

Quo Vadis?

Last issue we introduced you to a quest which could lead to untold riches — well, a Coleco Adam micro-system anyway! Here we present part two of our Quo Vadis? challenge. But remember, you still need the giant picture featured in our May issue to help you solve the quest. If you missed that issue, don't despair — you can still get hold of one by contacting our back issues department at Market Harborough. The address is at the front of this magazine.

Simply read through the following story and solve the questions posed within it. Don't forget to look for clues in the illustration of a very famous chap called the KEWL!

This Quest is brought to you by the multi-talented rock/pop band called Mainframe — whom you may have spotted recently on

BBC's Saturday Superstore and who can be seen again on Yorkshire TV's new computer show, *Me and My Micro*, later in the summer.

Runners-up will receive copies of Mainframe's new LP, *Tenants of the Latticework* — but the first two of you to solve the Quo Vadis? quest will win a complete Coleco Adam computer system worth over £700.

Now read on and you'll soon be mystified by part two of our baffling puzzle...

THE RULES

- All answers MUST be sent to Computer and Video Games on the form which will appear in our July issue.
- The editor's decision is final and no correspondence will be entered into.
- All entrants must complete the entire Quo Vadis? quest.

"Hurry up!" cries the AGAS, beckoning furiously. "U'll miss the KEWL!" says the brown cloud, puffing and blowing as it sweeps along the road, now heading North West of course. "He doesn't hang around very long in one place and if U miss his test then U will be stuck for ever".

And suddenly U notice this VG-like personage leaning on an elegant tellystick and bearing a strange resemblance to somebody U know... And he appears rather cross as if he has just missed the bus...

"This is the KEWL!" says the AGAS proudly. "He is a nice enough chap, very brainy and all, but tends to get a bit behind with things." "I think that's why he is always in a hurry — especially on Market days." The AGAS chortles gaseously to himself and takes refuge in a swift vapourisation to render himself later" says Ur obliging CVG. "Now I brushes his elegant moustache and, taking a paper from his top pocket, exclaims:

"Quo Vadis," said the KEWL.
"I've no doubt about that U'll
Be trying very hard to find the Key
To a very tricky question
Which starts with my suggestion
That U first look very hard at C...!"

"It could be that U'll say
A quite old fashioned way
Of making notes for everyone to see.
Will lead U to a name
Of engineering fame.
He started all this nonsense. Woe is me!"

"I ask U for the Date
When water brushed his pate,
To fix the little fellow's name for good
And if U've no complaint,
Pray tell me, who's the Saint,
The Lady of the House, it's understood?"

((a) ...)) ((b) ...))

AGAS immediately reappears having taken advantage of a slight fall in temperature to condense slightly and, recognizing that this is a tough problem for one so young, directs U to the nearest library. Making good use of the reference section, U very soon solve this little matter and set off North once more.

U see another Big Red Road, this time off to Ur right. It seems to disappear into a haze and, in the far distance, shimmers in a heat mirage almost as if it is crossing another such road far away. AGAS is humming a little ditty to itself: "Noise Mode Riding" and "Some Died Ironing" and a cheerful CVG joins U on the way.

This CVG knows the local terrain well and points out away to Ur right a huge plain at the centre of which U can just make out a shining monument or tower pointing skywards. "But U'll see all this later" says Ur obliging CVG. "Now I have to take U to the AURIC again for it has a Pronouncement to make about Ur next test".

And indeed U spot the AURIC once more, but this time in the company of a strange, scruffy Knight. They are standing by a sharp right-angled corner in the road.

"Who is that?" U ask the CVG. "Oh, that's the Chief's cousin, Dexter. We think he may have been a cricketer at

one time but he has to hang around this corner nowadays waiting for Adventurers."

The AURIC is making all the signs of speaking, but is struck by a flying object hurled by an objectionable AVG and promptly shuts up. "Oh dear, Oh dear!" cries the AGAS, "See to him, Dexter!" At which the Scruffy Knight leaps into the centre of the road and shouts:

Alas poor AURIC? No! No! He's alive!
And must bring U now ready to face
The toughest by far of the month,
Question Five.

I hope U are still in the race?

Pray tell me then, Questor, which time-honoured words

Assembled in order quite free
Can be made by the bits and the bytes
on the board

Displayed by the VGs of C?

For now it is Spring and children will sing

Of Video games, Fol de Rol (!)
If 6502 is the real CPU,

U'll have the solution, quite droll!

But if the Z80's Ur chip me old mately,
Oh, Must it be lost from the clue?
Three words must U find from an empire
declined.

The English one (four!) just won't do!

((a) ...))

"Fol de Rol indeed!" sniffs the AGAS. "Have they nothing better to do than muck about with computer games and stuff?" "But I see that U've managed very nicely so far." "However, this problem needs some extra data so that U can instantly solve it." And the AGAS U shouts to the AURIC: "Make with the data, AURIC!" And that languid extra-terrestrial lookalike slowly unwinds a shimmering sheet with the legend:

A4.A0.A1.2A.A0
10.A0.26.A2.A0
10.A2.A9.2A.10

glittering upon it. And without more ado, the AGAS points U East and bids U farewell.

Ur journey now takes U into a flat domain with the big plain on Ur right now clearly visible and the shining obelisk glinting in the sunlight. U are much troubled by this device but can, as yet, find no reason in it. The road is suddenly busy with VG traffic. AVGs flying in flocks like seagulls, AVGs digging holes in the road and CVGs everywhere trying to tidy up. On asking the way, U are told: "On, on, U're wasting time," so U press on at a brisk pace. With a loud tooting of horn and crashing of gears... a bus roars by, scattering VGs in all directions and U

notice the KEWL frantically adjusting the destination board from the back step. It seems to be coming from a place called "MAYLEORDURE," although the dust is obscuring Ur view...

U approach a big junction in the road. A Big Red Road goes off to the right at right angles and immediately after this U are confronted by two VGs called Adam and MacDonald who ask U firmly but politely to step into the huge field on the right of the road. It is empty but U hear the breathy tones of the AGAS intoning a little speech:

*Two VGs now confront Ur path
Young Adam and MacDonald,
The second never eats at home.*

*The first, an APPLE swallowed!
They bear upon their manly chests
Some data for inspection.*

*Just heed their names and calculate
To give Ur introspection.*

*Pray tell us then the number clear,
(The outcome of the feast...)
And then we'll let U pass, don't fear,
For now we'll know The Beast!*

The two CVCs dance around U shouting "See Peyew, See Peyew" but U see nobody about at all... But a moment's thought soon brings the answer...

((((a)...)) and thus the Beast: (((b)...))

"U can go now," cry the CVCs, "Keep going East till U see the Chief again. He'll have Ur next problem and will start preparing U for the Big Battle that

is to come..." "Bye..."

U are following the path of the East road, although U are still in the big plain. A BVG stops U and tells U to move South as the Chief will be there. U do this and notice that the Base is now on Ur left and U are coming to a Big Red Road crossing Ur path.

The Chief rides swiftly up on his charger and enquires after Ur health and well-being. "I'm fine," U say, "What is that noise I can hear over to the right?"

"That, young shaver, is The Dragon of Herbal Hill and is the fiercest of his kind in these parts." "U will have to fight him next month so I suggest U make camp here and gather strength for 'the ordeal'" says the Chief seriously, adding: "And I hope U have all Ur answers safely stowed away for inspection." "Otherwise U will never make it to the final treasure." And being weary of the travelling, U settle down to await events.

THE PRIZES

The first two people to solve the *Quo Vadis?* quest will win a complete Coleco Adam computer system worth over £700. This package has been causing quite a stir in the States and comes complete with a 75-key professional keyboard, an add-on called the Memory Module which plugs into the Coleco video game console, and a superb letter quality printer.

Runners-up will each get a copy of the album performed by the band called Mainframe — the people behind the mind boggling mystery that is *Quo Vadis?*

There'll be some other goodies to be won too by the time the competition ends — so watch this space for more news!

Can you meet Laserwarp's infinite Challenge?

Be a real game lord – imagine the quest for the ultimate high score!

At last – a real challenge for the arcade ace: Laserwarp, the most exciting arcade-style game around, in full, high-res graphics. It's got everything – fight your way through the ramships, space mines, homing droids, hyperspace chickens, interstellar pogos, and more, till you challenge the Master. Can you beat him? Can anybody beat him? Comes complete with Hall of Fame, coded verifiable high score – send yours in and see if you can win the £100 Mikro-Gen are offering every month (full details in instructions)

High scorers names will be published in a Hall of Fame in the computer press – and they will be invited to join in a Battle of the Champions.

NB – If you have the earlier version of Laserwarp, Mikro-Gen will replace it with the new version – FREE!

C & VG SOFTWARE FORM

Have you written a games program which you feel is just right for C&VG? If so we have come up with a form to ensure that we can test it out and give you our views on it, as quickly as possible.

We would prefer a tape and listing but can work from just a tape and will return it to you if it doesn't find its way into the magazine. We will also need an additional sheet explaining the game and its theme. And any documentation like lists of variables or how certain routines are working, would be of great help to beginners. Please make sure that your name, address and the program name is on everything

you send us, including the cassette itself.

This form will merely help us to keep a check on your game as it goes through our testing process and make sure we have all the information we need to present it properly in the magazine.

If you don't want to cut up the magazine, we will accept photocopies or close copies of this page. This form will be appearing regularly in C&VG issues from now on.

Remember we pay £10 for each listing published and you could win our Programmer of the Year Contest where we will try to turn the winner into a best-selling games author.

Program name:

Machine make: Model:

Other models it should run on: Number of K needed to run it:

Other equipment (joysticks, Extended Basic, add ons, etc.) needed to run it:

Author's name: Sur-name:

Needs to be returned to author for alterations: <input type="checkbox"/> Date sent:	Wouldn't load <input type="checkbox"/>
Due to be published in issue of magazine.	

Most hard-nosed electronics businessman will tell you that the domesticated robot — one you can use about the house — is at least a decade away. These Homebots would do a bit of hovering or fetch a Coke from the fridge. Now that doesn't sound that impressive in this age of hi-tech. But when you consider all the separate decisions a Homebot must make — leaving aside the mechanical problems for a moment — in order to fetch that drink, the homebot has to be able to understand just what it is you've asked it to do, then move to the place where you keep the fridge, open the door, identify the Coke can, grab it and return to the room where you are waiting eagerly for a refreshing drink.

games player? Well, how about the ultimate Adventure? A robot adventurer could travel through a real landscape, sending pictures back to your TV and be your eyes in a truly three dimensional fantasy land. With the advent of the cable TV games networks, this may not be as far off as you think.

Meanwhile, let's get back to earth for a rundown on the robots that are available right now. They won't be able to do a great deal for you just yet, but if you want to get one up on your friends who still think it's the IN thing to have an order form for a QL, having a robot in the house is just the thing. Read on and discover the future...

ROBOT NAME: RB5X
MANUFACTURER: RB Robot Corporation (USA)
PRICE: Not available

RB5X is quite small — just two and

a half feet tall — and looks a bit like R2D2 from the Star Wars movies. It is dustbin shaped and comes with or without an arm. It zaps along at four inches per second! RB5X is equipped with a ring of bumper switches and a highly directional sonar system capable of sensing objects at distances from 10 inches to 39 feet. Infra-red sensors under its body can detect markers on the ground including a line which leads it to a charger which boosts its batteries when its feeling a bit low.

RB5X can be fitted with a vacuum cleaner, a trailer and a fire detector and extinguisher. You can also add a voice device and speech recognition equipment so that it comes when it's called and does what it's told! (We could do with one of those in the office...Ed)

This little chap is designed to grow as its owner's demands increase. But again you have to use a computer to control it — either an Apple or an IBM personal computer.

ROBOTS' NAMES: Movits
MANUFACTURER: Prism
PRICE: £9.99-£34.99

The Movit family comprises a gang of five of the most unlikely looking robots.

They are the most basic of all the robots mentioned in these pages and a far cry indeed from Topo or Tom. They range from very simple to not so simple and certainly won't be rushing round the house doing you household chores!

The one common denominator amongst the gang is that they are motor driven from batteries and mobile, although each robot, or

Developing the necessary technology to create a really useful Homebot is entirely feasible. As engineers steadily increase the capabilities of industrial robots — like those monsters which star in the Fiat TV adverts — they are eventually the bits and pieces that will eventually help a Homebot feed your cat.

The Homebot will need to see — or at least feel — its way around your home have a big memory, be able to speak and recognise it's owners voice, so the development costs are going to be massive. But remember, you may already have a robot of a sort in your kitchen at home. Just look at the programmable washing machine in the corner — that's really a robot without eyes or legs!

Ultimately your entire home could be controlled by a brain — which in turn controls robots to handle household chores like cleaning or answering the telephone. The dishwashing robot would be up to its universal joints in soap suds upstairs while the "brain" is buzzing away in the broom cupboard telling another robot that the cat needs its dinner! robot that the cat needs its dinner!

But what, you will all be asking by now, has this got to do with the

From left to right: Hero 1, RB5X, Movits.

moves in a different way.

The Piper Mouse looks like a mechanical bumble bee mounted on three wheels. Controlled via an ultrasonic controller, it can be instructed to turn left or right, to move forward and to stop.

The Line Tracer is another three-wheeled blob which will follow a black line drawn on a white background — and that's about all it does do.

Perhaps the most interesting is the Monkey which is suspended from a length of wire and moves along by cranking its arms back and forth. A sound sensor activates movement

ROBOT NAME: Topo
MANUFACTURER: Androbot/Prism
PRICE: £1,500

The first Homebot to make any impact on the UK is Topo from Androbot — the US company launched by Nolan Bushnell. Bushnell's previous invention was a video game which in turn spawned a company called Atari.

Bushnell's involvement in robots is one reason why so many people are taking a sudden interest in robotmania.

How seriously you treat a man who once tied an electric light to a kite and flew it above his home town! simulate an alien attack is your affair! Topo is the deluxe model and will set you back £1,500. That's if you already own an Apple — the only

computer which can use the only control language which exists so far. And you do need a computer to play. Play? Well, what else can you call it. Topo can't Hoover, do the ironing, or fetch you a pancake roll and chips from the local take-away.

specific functions provided you've programmed it first. Alternatively, Maplin have developed an interface allowing Hero

popular home micro, thus control is established directly from your computer keyboard — by means of a direct wire, infra-red or radio link. Hero's one step nearer to fetching that elusive Coke — so long as you put it within its reach and program it to fetch it, all of which will take a lot longer than walking across the room to get it yourself!

And if that isn't enough for you — it can also see! Well, in a sense. Using a highly developed ultrasonic system, it is capable of detecting movement or motion and can detect an average size adult walking towards the sensor from 15 feet.

ROBOT NAME: Tomy voice recognition robot
MANUFACTURER: Tomy
PRICE: £35

Here at C&VG we realise that Tomy's VRR is great value for money and a good introduction to learning to live with a robot!

What makes life really easy with Tomy around is that it will obey eight basic commands programmed into its master's voice, ie radio controlled and has limited vocabulary. The voice recognition system understands stop, talk to me, pick up, put down, go forward, go back, turn left and turn right.

We've got two of these little chaps up for grabs if you enter the Win a Robot competition on the competitions page. It is house trained, good fun and will be a great mate to have around.

when a noise of sufficient volume is picked up.

Imagine a yo-yo with a battery between the two discs and the basic the Circular. This is the most basic Movit and is controlled via a cable link. It'll move in circles or a straight line.

The Memocon Crawler is probably the most advanced and is controlled via a 5-key pad.

I can't think of any practical application for these mechanical weirdos but they'd be great to play around with. They come in kit form with detailed construction drawings.

ROBOT NAME: Fred
MANUFACTURER: Androbot/Prism
PRICE: £200

Fred is Topo's little brother and it is a bit of an artist. Given a pen or pencil, it can whizz around drawing pretty patterns pre-programmed on a computer. Fred is just one foot high and can be controlled via a computer, a joystick, or the portable but a little chap. Fred can also talk — it's got a 45-word vocabulary which can be expanded. It is perhaps a bit more useful than its big brother — it can be used as an educational tool. But it still can't go out and grab that can of Coke!

So what can it do? It can act as guard dog or fire alarm. The manufacturers claim that it can also be used to mow the lawn, but this seems at best doubtful and certainly a lot more hovever than a Hoover! Topo can talk. You program in what you want it to say on your computer and this is transmitted to it via an infra red link. It also has a teach mode which enables the owner to show Topo the layout of the area in which it will be moving. Topo then knows where the valuable china is and won't — hopefully — knock it off the Queen Anne table as it whizzes past.

Topo is three feet high and two feet wide and is available from Prism Consumer Products of London.

ROBOT NAME: HERO 1
MANUFACTURER: Zenith Data Systems/Maplin
PRICE: £2,495

Hero's a cute little chappie who stands 20 inches high, who has only one arm and performs a few more than the usual Homebot functions. Hero is controlled by an on-board processor and can be programmed to travel short distances, pick up objects, to speak and carry out

Visions

DEMOLATOR

Following the Thousand year war with the Alien Demolators the last remnants of the human race are being transported across the galaxy in cryogenic suspension aboard the B.S. Quinn (Battle Star).

The Demolators however have invaded the cargo bay and it is your job to destroy the Demolators and to protect the human cargo. All you have to defend Humanity with is Xeno (popularly named "the Phobe") the

ultimate Robot. You can control his movements on two planes and fire an ultrasonic Cannon to defend humanity with.

DEMOLATOR — BBC — MODEL 77 (S) 2, £6.95

VISIONS (SOFTWARE) FACTORY LIMITED 1 FELGATE MEWS STUDLAND STREET LONDON W6

More than fun and games!

FIRST STEPS with the Mr. Men

by Primer Educational Software

The ever-popular Mr. Men help prepare young children for reading with four simple and absorbing games designed to exercise essential skills as well as entertain.

An easy-to-use, colour-coded key guide is included with an illustrated introductory book, featuring the Mr. Men. For ages 4 to 8 years. Available now on cassette for the BBC B, Spectrum 48K and Electron **£8.95**.

QUICK THINKING!

by Widdig Software

Two mind-stretching, space-age games to test mental arithmetic and nimble fingers.

In **Sum Vaders** alien robots invade the earth. Only quick thinking and fast reactions can prevent them. Several levels of difficulty and a two-player game with a handicap option make Sum Vaders equally testing for all family members, from 8 years to adult.

Robot Tables challenges the young player to make a series of perfect robots.

Knowing your multiplication tables is the key to controlling the robot-making machine. With a learning mode and a testing mode, Robot Tables is a fun way

for early learners, and more advanced children, to master an important and often neglected skill.

Available now on cassette for the Spectrum 48K, Commodore 64, BBC B and Electron **£6.95**.

CAESAR THE CAT

by Andromeda Software

Meet Caesar, a cheeky young cat on duty in a well-stocked larder. He's kept busy chasing a gang of hungry mice eating the family's food. Playing against the clock, you guide Caesar along crowded shelves to pounce on the mice.

A fast, colourful, all-action, arcade-style game with catchy music and a best-score record. Challenging for high-scoring arcade addicts as well as great fun to play for the novice. Available on cassette for the Commodore 64 **£8.95**.

The very best in arcade action-

is brought to you by Tansoft – the specialists of the Oric-1 and Atmos Computers.

Defence Force:

Pilot your space-craft through alien territory and fight off the enemy approaching from both sides. 48K. £7.95.

Ultima Zone:

Shoot the Walkons, avoid the bouncing Brunes and battle your way through the satellite zone. 48K. £8.50.

Rat Splat:

A revolting game. Splat the rats in the sewer before they consume the cheese, and destroy the monsters before they consume you! 48K. £7.95.

or let's get down to business!

Tansoft produce a wealth of business and utility software to cater for every interest. The 'not so' games-minded people may be coming to grips with:-

Author: A powerful word-processor program which includes word-wrap and word-count. Ideal for letters and reports. 48K. £14.50.

Oric Calc: A full spread-sheet program allows you to sum columns or rows and apply complex formulae. 48K. £14.50.

Oric Cad: A computer aided design program for displaying, rotating, enlarging and shading objects on the screen. 48K. £9.99.

For the full range of Tansoft software – which currently numbers over 20 titles – pick up a catalogue in your local Computer Store or contact Tansoft at Unit 1, The Techno Park, 645 Newmarket Road, Cambridge. Tel. Teversham (02205) 2261.

TANSOFT

Basic is slow. Very slow. When you're running a Basic program, you may sit marvelling at the apparent speed with which it churns through those calculations, or moves all those aliens around the screen, but things are not quite as they seem.

At the heart of any computer is a chip called the CPU (that's the Central Processing Unit). It is this chip which actually does the work of running your Basic program when you type RUN. Unfortunately, it doesn't understand Basic words like PRINT, INPUT or GOTO.

The CPU can only understand programs written in a special, very complex language which is difficult for us humans to understand. These programs don't have real words, just lists of numbers which is fine for a chip, but not for a person. However, because the CPU can understand it directly, the program will run very fast. This language which the machine uses is known as machine code.

So how can we make our programs easier to understand, and take advantage

of the speed of machine code? Compilers are often regarded as magic. A plain program goes in at one end, and pure machine code comes out of the other. But are these programs all that they seem? Will they cope with just any program? And what about languages other than good old Basic? Will new languages, invented for the convenience of the compiler's author, perform well for the inexperienced programmer too? Bug Hunter has been trying them out and here he presents an easy-to-read jargon-free report.

tage of the speed of machine code?

What's needed is a computer which can be programmed in near English and not those endless streams of numbers. And so, in 1964, Basic was born. This was a simple programming language, where INPUT meant read the keyboard and PRINT meant print out on paper.

However, there was one major problem with this language: although the programmer could understand it, the computer couldn't. The CPU, you'll remember, can only understand programs written in that simple language called machine code. So what was needed was an extra program built in to the computer which could convert one language to another. This was designed, and was given the same name as a human doing the same job — an interpreter.

The interpreter is a program which usually sits in a chip of its own in the computer. This means that, although it's a program, you normally don't have to load it from tape each time you use

the machine which would be time consuming.

When you've finished entering your Basic program and type RUN, the interpreter takes over and translates the first line of your Basic program into lots of separate, short machine code instructions which can then be run by the CPU chip. The interpreter then starts work on the second line and so on, working its way down the program and translating each line into a form which the CPU understands.

If, when running your program, the interpreter comes across a line which says 'go back to the first line', then it will have to start translating again from the top. Although it has already translated the first line once at the start, it'll still have to do it again each time it needs that line.

The problem is that all this translating takes time which is why Basic programs run around 30 times slower than those written entirely in machine code.

What would be ideal, then, is a program which could translate the en-

which means that the programs you write in Scope run very fast.

You'll remember that machine code is a very simple language and it has very few instructions, so recreating some of Basic's more involved functions will often require hundreds of machine code instructions.

For example, the Basic function LEN (A\$) will work out how many characters are in string A\$. Although this is simple in Basic — you just type PRINT LEN (A\$) — think how difficult it is in machine code.

The CPU doesn't have a built-in way of calculating lengths of strings — in fact, it can't even handle strings directly. To find the length of a string in machine code, you'd have to start at the first character and work your way along the string, counting the characters as you go. You'd also have to check that each character existed before you counted it, to make sure that the end of the string hadn't been reached. Next time you use LEN in a Basic program, think how much work the interpreter is saving.

your program, you are giving away copies of the compiler too! An example of this is some of the early copies of Blue Thunder for the Spectrum by Richard Wilcox Software.

If you think that you have such a copy, load the first 5k of machine code then PRINT USR 48011. You'll then be in the compiler and, with a little experimenting, you can use it to compile your own programs. If you are going to try this, type CLEAR 27001 first, otherwise you'll get some weird lines inserted. To run the compiled program type PRINT USR 27002.

Anyway, with all those different compilers around, it's about time we reviewed some. So let's start with one from Salamander Software, normally known for their Dragon programs. The compiler, though, is for the BBC and is called Turbo.

Probably the best feature of this package is that it also runs on the Electron as well as the Beeb. The reason for this is twofold — first, because it lacks all the features which

mincing Words

tire Basic program into machine code at the start before running it. Although this means a short wait at the beginning, once translated, the program would run at the speed of true machine code — in fact, it would BE true machine code. We call this special kind of interpreter a COMPILER.

So a COMPILER is a program which translates an entire Basic program into pure machine code. But why stop at Basic? Why not create other languages and write compilers for these, too? The program would have a choice of languages, but the final machine code would still be the same.

Well, people did just that. As well as Basic compilers, you can now buy a compiler for Pascal, Fortran and many other languages. Some companies have even invented their own for special tasks. ISP, for example, has a language called Scope which is designed for writing fast graphics games. It's not really a games designer, more a program language and, because it's a compiler, it produces machine code

So every time the Basic program contains a LEN function, the compiler would replace it with the relevant block of machine code instructions and, apart from the name of the variable, the code would be almost identical in all cases.

For this reason, the standard routines are converted into machine code and stored, along with the compiler itself, in the memory of the computer when the compiler tape is loaded.

When compiling the Basic program, any LEN instruction can be replaced in the resulting machine code, not by the code itself, but just by inserting a diversion to the already-prepared machine code.

However, there's one big problem with a compiler written in this way. When you save the compiled program on tape or disk, you have to save the actual compiler as well, otherwise you won't be able to run your machine code as parts of it will be missing! This means that if you write a program using a compiler of this type, and you then sell makes the Beeb tower over the Elec-

tron under normal Basic circumstances and second, because it's only 2k long in total. If you're now wondering whether or not you can fit a decent compiler into 2k, I'm here to tell you that the answer is definitely no.

The program comes on cassette, with a tape version on one side and a disk version on the other. If you want to use the disk version, you'll have to load the cassette and then save it to disk using the instructions supplied in the manual.

Other than telling the user about this transfer, the remainder of the 28-page manual serves as the entire reference on the subject.

Reading through it, you begin to realise the limitations of the program which is a shame, as the idea is very good. The fact that it occupies just 2k is amazing, even if what it can do is not.

The range of commands which Turbo can handle is limited. The list includes PRINT, GOTO, GOSUB, RETURN, FORNEXT, LET, CLS, CLG, CALL, VDU, SOUND and IF. In fact, that's about the

whole list, but there's worse to come. Reading on, all line numbers in the Basic program you want to compile must be between 0 and 255. Multiple statement lines are out and so are all variables except A to Z. Strings are not directly supported nor are numbers with a decimal point. And we're only on page 10 of the manual!

Although this compiler is pretty rudimentary, I admit that, if you're only interested in writing simple, fast games, then you may find it useful. However, a good compiler should allow you to load absolutely any Basic program which you have written in the past and compile it. This is certainly not the case with Turbo.

If it's a Dragon you own, you can get a Basic compiler for £14.95 from Oasis Software of Weston-super-Mare. Like Turbo, it won't allow numbers with decimal points, but apart from this fairly important omission, Sprint does approach something resembling a true compiler and it will cope with nearly every command in Dragon Basic. Although it is better than Turbo for the

certainly not just another games designer. Scope is actually a programming language. Originally available on the 48k Spectrum, it has recently been improved and renamed Scope 2. Owners of Scope 1 can simply return their original cassette and, for the difference in price of £3, obtain mk 2.

Scope is now also available on cassette or disk for the Commodore 64. To write programs here, you just write it as a normal Basic program, but each line must start with REM. So although you won't be able to run the program under Basic, the Scope compiler will know what to do. A simple Sys call will compile the program, and another one will run it. The compiler does not have to be in the micro's memory for the compiled program to run. This system handles sprites, graphics and sounds. One of those endless POKEs to various graphics and sound control registers: four Scope commands handle all the sprites, and a few more deal with music.

An added extra is that everyone who buys a copy of Scope gets free membership of the Scope Users' Group. You can

mincing Words

BBC in this respect, it's partly because Dragon Basic is far less sophisticated.

Anyway, to use the compiler, you first write your program in Dragon Basic on the machine itself. When you're satisfied that it's working perfectly, you save it on cassette.

To compile, you load the compiler and then the Basic program. The compiled version can be run with an Exec command, or saved on tape and loaded later with CLOADM.

This is the way it should work — your program is perfected under normal Basic and then compiled. The reason that you write it under normal Basic is that, if you find bugs, you cannot correct the final machine code version as easily as a Basic listing.

There are very few commands which Sprint will not support, although some are written slightly differently under Sprint to get round the lack of decimal numbers. Commands not available include CLOAD, RENUM, LIST, EDIT and MEM. The trig functions (sin, cos, tan, etc.) are also missing as these cannot be calculated without decimals.

At the back of the manual is a list of hints to help in running and loading. Loading the blocks of uncompiled program is often unreliable and a few helpful POKEs are suggested. If all else fails, the final paragraph says that "you'll need to beg, borrow, buy or steal another cassette recorder". Yet the warning to potential copiers of the compiler tape itself is made very clear at the front.

In addition to compilers which start with Basic, there are some which have their own language. It is this language which is converted to machine code, so the end result is no different to machine code produced from original Basic, but because the writer of the compiler also invents the language which the programmer uses, it can be made more specific to certain areas.

One such product is Scope from ISP. Scope stands for Simple Compilation Of Plain English. This new language has just 46 different words, and is graphics oriented. Although its main function is to produce fast-moving graphics, ISP goes to great lengths to point out that this is

send off for your free piece of plastic, complete with special membership number and, which is more useful a telephone hotline number with a friendly voice on the other end who will help you in your hour of need while trying to perfect your Scope Program.

So now you know what a compiler does. Or what it should do. There are literally dozens of them around at the moment — some costing a few pounds and some costing hundreds. Oxford Computer Systems produce some very good ones, including what's called a cross-compiler. This doesn't mean that it's fed up with writing programs! What it does is allow you to write in Basic on one machine but produce machine code which will run on another. So, for example, you could write a Basic game on a Pet but compile it so that the machine code would run on a Commodore 64.

If you'd like more information about what's available for your machine, have a look through the adverts in this magazine. Or try the computing section at your local library.

GEM SOFTWARE

SOFTWARE FOR THE
BBC-B AND SPECTRUM

DISCO DAN for Spectrum 48K

(495)

Can poor Dan decontaminate the atomic fuel rods in time? In this new 3D machine code game, you control Dan Dan, the Atomiser Man, jumping hot from disc to disc, trying to reduce the ever increasing radiation levels in an atomic pile. However, Up is Atom Army and his gang of wafer particles are thirsting for the energy in your back pack, which makes life a bit awkward at times. Then there's Blax the Rasculous Robot, not the sort to meet in a dark alley (or anywhere else for that matter).

GALACTIC EMPIRE for BBC-B (15-16)

(505)

A game of inter-stellar logistics, trade and battle. You and your fellow galactic war lords must wage war across the Galaxy, until one of you achieves total supremacy. You must balance your resources to fuel colonisation programs, starting production, battle campaigns and a host of other enterprises whilst fighting off attacks from other war lords, avoiding famine, plagues and natural disasters such as super novae, black holes and accidents in hyperspace.

DIGGER MAN for Lynx 48/96K

(735)

The nasties are out to get you, as you run around the levels and ladders of the four different screens in this new and exciting machine code game! Your only defense is your trusty spade! You must dig holes in the levels so that the nasties fall in, then bash them on the bonce so that they fall all the way through. Beware though, give them time to crawl out of the hole and they turn purple with rage becoming twice as difficult to destroy!

TWINKLE for Lynx 48/96K

(735)

Wave upon wave of swoozing, darting, alien ramships, diving fireballs, perilous energy hands and moving space discs all combine with incredible sound and technical graphics, to make this one of the best and fastest games ever likely to be seen on your Lynx. With choice of joystick or keyboard controls.

MINEFIELD - 64

A bug seems to have appeared in the Commodore 64 listing as published on page 96 of May's issue of C&VG. Line 10 is used to read 62 pieces of data, but line 9020 suffered from the printers' quillotine and lost a few of the numbers. To cure this, add three commas after the final zero on line 9020. Also, the gap between the 0 and the 3 on line 9000 should have 2 extra commas inserted.

GET DOWN, SHEP.

A couple of readers have written to me with a way of obtaining unlimited lives on Acornsoft's Rocket Raid for the BBC B. First out of the bag was Lee Taylor from Cleveleys, Blackpool and here's all you have to do.

Type CHAIN "" and load the game as normal. Lose your first two men and press BREAK when the third one appears. Now type MODE 2 (return) and CALL TOP (return again).

The game will then continue as normal, but when you lose a man you'll see a huge explosion (I hope he means on the screen: I'd hate to see a BBC in flames). This will last for about three minutes, after which time the game will return to normal. You now have an unlimited supply of lives. Only problem is that the explosion will repeat itself every 127 lives.

OF CARTRIDGES...

Letters to Bug Hunter in the past have been exclusively about computer software. So, for a change, here's one about an Atari VCS cartridge: Berzerk in fact.

If you're on game 2, 5, 8 or 11, then stand at the extreme left hand exit of a maze and fire a laser bolt. It will then reappear about three inches behind you.

However, if you're being chased by the bouncing, evil Otto, then he'll disappear, as if by magic!

This should improve your score no end, and you have Simon Stokes from Erdington, Birmingham to thank for it.

...AND MANUALS

Not only do we talk about bugs in cartridge software, but this month I've even found a bug in a manual. We're nothing if not different, as they say.

If you've recently bought one of those Commodore 1541 printer/plotters during the special offer, you may have an early version of the manual which tells you that the printer is device number four.

If you keep getting a 'device not present' error, then you may have one of these manuals. In this case, just use device number six instead and all will be well.

The problem stems from the fact that although printers connected to the IEEE connector are device four, the plotter uses the serial interface, which is six. Simple when you know, isn't it?

SO LONG!

A couple of problems have emerged from deep within the Commodore listings in April's issue of C&VG. The programs do actually run perfectly, but some lines are too long to fit into one line of Commodore Basic. Don't ask me how they got into the listing (!), but here's what to do.

In Centre Crystal for the Commodore 64, line 22 is too long. Take the first statement (ZX=IE3) and put it at the end of line 21: you'll need a colon before it, though. Then you can delete that part from line 22 (including the colon) and all will be OK.

The Vic program, Minefield, suffered

from the same problem, but this time it's in line 610. You can cure it by splitting the line at the colon between C\$=B\$ and X=INT "... Remove everything after the colon, including the colon itself, and put it on line 615, which you'll have to create as there's no line with that number in the program as it stands.

BINARY BOOTS

Everyone must have heard by now that it's possible to cheat on the Spectrum version of Manic Miner by Software Projects. Type 6031769 while the game's running and a boot will appear. Pressing combinations of keys will now transport you directly to the level of your choice. What no one knew before, though, was the logic behind the strange choice of these key combinations.

But now, Bug Hunter Enterprises, in association with A. Kelly from Birkenhead, Merseyside, presents the explanation.

Select the number of the level you want to play and subtract one. Now convert it to binary and use keys 1,2,3,4 and 5 to represent the binary values of 1,2,4,8 and 16.

So get to your level, press the relevant keys (ie. all the bits of the binary number which are set to 1) and also the number 6. You'll then start playing on your chosen level.

Mr. Kelly states that this method works for all levels except the first, where you only press 6. But, the first level is one; subtracting one leaves zero which means that you don't press any of the keys 1 to 5. So it appears to work for all levels.

Only problem is that the surprise awaiting you on completing the final screen will not appear if you get to the screen while in 'cheat' mode.

That's it for another month. Remember, you can write to me about any problems you have either with the games in C&VG or in professional software which you've actually paid out hard-earned money for.

If you want to save the cost of a stamp, send me a mailbox on Micronet — my account number is 012 786 556. But if you do, use page 89, otherwise I won't get your address.

Not just a games designer - this remarkable product will revolutionise programming. Easy to use, supplied with bumper instruction manual - tells you everything you need to know. COMMODORE 64

£17.95

SCOPE II

48K SPECTRUM

A complete update of the original award winning product - with many Fantastic extras. Sprite routines - Machine code Peek & Poke. Will run your original program totally independently. Original SCOPE owners - send in your old tape & £6.00 for a complete update and new bumper size manual.

NOMINATED
PROGRAM
OF THE
YEAR

SCOPE COMPILES TRUE MACHINE CODE TO RUN TOTALLY INDEPENDENTLY
- not just a games designer - with SCOPE you can write truly original machine code & publish your own games!

ALL THIS PLUS Free Membership to the SCOPE User's Club PLUS the unique Programmer's "hot-line".

48K SPECTRUM

SPECTRUM SPRITES
Today's games need sprites. Here's everything you need to know about designing and handling sprites. All in a single pack with full instructions. Handle 8 sprites simultaneously - collision detection. It's all here!

£7.95

The
CHARACTER GENERATOR

48K SPECTRUM

Another product essential for that unique and professional finish so important in today's programs. Design your own UDG's and complete character sets. 8 x 8 Pixel grid for easy design. Includes 6 specially designed character sets. Compatible with virtually all other machine code software. Big manual tells you all you need to know. Too many extras to list here.

£8.95

48K SPECTRUM

The SCREEN MACHINE
The definitive screen editor for building and assembling graphic layouts & title pages. Includes many facilities essential to produce really professional screen layouts. Supplied with big manual with full instructions.

£8.95

The
MULTIFILE

48K SPECTRUM

The ultimate user friendly database. You design as many tailor made filing systems for whatever purpose. Each protected by your own secret security codes. Full instructions manual includes FREE TAPE for your first file.

£9.95

MONSTERS & MAGIC

A classic adventure game requiring hard thinking & quick reflexes. Puzzles to solve and monsters to defend all in real time. Being modular - treasure and experience can be carried forward. The first two modules are Treglith, Stronghold of The Giants and Temple of Cithsar King of the Undead. Enter at your peril

£6.95

BATTLE PLANET

Your mission is to fly into the trench & launch a plasma bolt into the Battle Planets' heart. You must avoid Robot Fighters. Other Robot Fighters will bombard you, then the Robot commander joins the fight. He is invincible! Save Mankind!

Superb 3-dimensional graphics - only for the most competent player - This game is one of the best.

JAPAN

Since writing the article on the Japanese arcade scene in our February issue, Tom Sato has been back to Japan to report on exciting new developments in the Japanese computer and arcade industry. Here's his report.

The Japanese arcade industry seems to be at a turning point. I visited numerous arcade centres around Tokyo and, although the games they had were completely different from the ones I saw a year earlier, the manufacturers certainly look as if they have run out of original ideas for arcade games.

The current trend is toward sports simulations. *Hyper Olympics*, or *Track & Field* as it is called in Britain, is the best example of this. You can take part in six different events — the 100m dash, long jump, javelin, 110m hurdles, hammer throw and high jump. The game has great graphics and the characters run and jump realistically.

It's really easy to play. All you have to do is bash away at the run and jump buttons! I'm sure many of you have seen this game at your local arcade already as it is widely distributed in this country by Taito.

Konami, who produced the game, ran a *Hyper Olympics* competition in Tokyo during February and the first prize was a trip to the Los Angeles Olympics this summer. In addition, most of the arcade centres dotted around Tokyo had a large number of *Hyper Olympics* machines, which made it a major hit.

There are many other sports simulation games in Japanese arcades. Pro Wrestling, Boxing, Women's Volleyball, American Super Ball, Baseball, Soccer, Doubles Tennis, Roller-Skating, Water-Skiing... You can play the entire Olympics on an arcade machine!

Personally, I get more out of watching Match of the Day, but then some of these sports simulations are quite amusing — *Pro Wrestling* for example. You can even play a tag match — complete with angry crowds of spectators raging in the background as you pile drive your opponent!

There are now — as you'll know if you've been reading your copy of *Computer & Video Games* carefully — several laser disc games on the market. The most notable is *Laser Grand Prix*, a Formula One racing game, featuring live film of a race track.

Apparently Taito, who make the game, had a staff of over one hundred filming at the Fuji Grand Prix circuit. Each frame shot was analysed to calculate the position of the ground, with respect to the computer generated cars, so that they appear to be running on the circuit.

This is not easy, since cars must be placed at the right position and angle on the screen, otherwise they will appear to be floating above the road.

At the moment, the pride of every arcade centre in Japan is the Tazumi TX-1

Illustration: Mitsuo Sugawara

END OF THE ARCADE ACTION?

motor racing game. This machine is usually placed in the most prominent position in the arcades. Forget the laser disc games, TX-1 is about the best arcade machine ever invented.

This giant racing game has three large screens which totally fill your field of view, and an excellent stereo sound system. The turbo-charged F-1 graphic racing car is about three times as large as the *Pole Position*.

The sound is amazing, especially the echoes inside and just outside a tunnel. It is quite unbelievable that a computer can generate such realistic sound effects.

The machine itself is much larger than ordinary machines. It has a steering wheel and gear lever which wouldn't look out of place in a real car. It also has brake and accelerator pedals — some people have found the game so realistic that they've been looking for the clutch pedal in frantic moments!

The extraordinary fact about this TX-1 is that it was Tazumi's very first arcade machine. They have previously avoided the arcade industry. It's surprising also that they decided to join when most of the other manufacturers are concentrating more on home computer software.

The sad fact is that there's no doubt that the arcade boom is nearing its end. Most of the arcade centres I visited in Tokyo were only a third full at best. It is simply not 'trendy' to play arcade games now. This is despite the fact that most arcades are running the latest state of the art machines — like the TX-1.

Most arcade companies are now wisely considering moving into the home computer software market. The major cause of the decline of arcade machines is due to the fact that you can play video games on a home micro for free. If you can't beat them, then join them!

Those who are already selling home computer software are Namco and Konami. Namco created such masterpieces as *Pac-Man* and *Pole Position*.

They also have versions of *Xenious*, *Dig Dug*, *Mappy*, *Galaxian* and *Pac-Man* for various micros. Most of them are limited due to the capabilities of the host micro, but they all have the same algorithm as the arcade version, so you can apply the same tactics.

Nowadays in Britain, microcomputer versions of old arcade games do not sell all that well because there are so many different versions available. However, in Japan, the computer boom has just started.

Games such as *Pac-Man*, which is considered out of date by the British, are selling extremely well. There is even a serious shortage of Namco's games cartridges.

Japan is approximately one year behind the UK and US in terms of computers sold. The hardware is excellent in terms of performance and reliability, but the number of computers sold in Japan is relatively small.

This is about to change, however, with the advent of ASCII Microsoft's MSX standard, which allows software and hardware compatibility between differing manufacturers. Namco and Konami are concentrating on converting their games to MSX standard.

By January, Konami had 10 of their games converted to MSX. These include *Frogger*, *Time Pilot* and *Super Cobra*, but their biggest hit is *Antarctic Adventure*. All Konami's games come in the form of an 8k ROM cartridge and they can be used in any computer which uses the MSX standard. There are over 20 of these!

Let me describe *Antarctic Adventure*, my favourite MSX game, in more detail. You control a cute little penguin with a pair of skates sliding on a vast ice field. Your aim is to reach the exploration bases of various countries dotted around Antarctica within the time limit.

You can see the penguin skating along in very smooth 3D graphics. There are numerous holes on the ice which you must jump over. Occasionally a red fish will jump out and, if you catch it, you score extra points. Sometimes a seal will

emerge but you cannot jump over this creature so you must carefully avoid him.

If you fall into a hole, you can see your penguin furiously trying to climb out, which is very comical. The jumping action of the penguin is excellent and the approaching seals and fish are very realistic.

For some absurd reason, this game is advertised as an educational game for geography! The only thing you are likely to learn is the location of every exploration base in Antarctica. Still, I reckon that *Antarctic Adventure* is about the best non-violent home computer arcade game ever!

It was in late 1982 when ASCII Microsoft, who previously supplied modified versions of Microsoft Basic to the Far East for Microsoft US, talked to several computer manufacturers in Japan, proposing to set a standard for eight bit home computers.

At that time, there were a vast number of home computers which were not compatible with each other. This deter-

red potential computer buyers and the computer boom never took off in Japan as it had done in the United States or in Britain.

The manufacturers thought it was a great idea and after lengthy discussion, on the 16th of July 1983, ASCII Microsoft together with Microsoft US, held a press conference, announcing the MSX plan.

Despite receiving a cool initial reaction from the US and Europe, most of the Japanese manufacturers enthusiastically developed their versions of MSX computers.

By late October last year, the first of the MSX machines appeared from National Panasonic. Hard on their heels came 11 other companies determined not to miss the Christmas sales. By January this year, there were 12 manufacturers selling some 20 different models using the MSX standard.

MSX computers now represent 30 percent of the total computers sold in Japan. It is set to become the biggest selling consumer electronics product since the video tape recorder.

So what is MSX standard? Basically, all MSX computers have a common hardware design and the Extended Microsoft (MSX) Basic.

It might sound silly — 12 manufacturers making machines with the same hard and software — but they all tend to add little extras to make their machines as different as possible from each other.

Take Yamaha's MSX computer, the YIS 503, for example. It has all the MSX standard hard and software but, on top of it, they built in a special synthesiser chip to turn it into a polyphonic synthesiser.

Because there is no need to rewrite software for different breeds of MSX machines, the software houses, who were previously complaining bitterly about software incompatibility, are now extremely happy with MSX and can concentrate on writing original software rather than converting old material.

People can now buy MSX without fear of lack of software and the large number of competing manufacturers means that they can expect high standards and availability.

MSX Basic is a vastly expanded version of Microsoft Basic found in Dragon and Apple micros. It also has features of G W Basic which is used for 16 bit microcomputers.

It supports two text modes and two graphics modes, the maximum resolution being 192 x 256 dots with 16 colours. It can handle up to 32 sprites which can be moved 'above' the actual screen without disturbing it.

One thing you can be assured of is that the companies supplying MSX games don't publish any rubbish. This is understandable when you consider that they were the people behind the video game boom in the first place.

The MSX standard gave them the perfect opportunity to expand — and they are reaping the harvest of their past effort.

OUR HALL OF FAME GAMES

C&VG knows that all you gaming fans are just dying to make your mark on the universe's premier computer magazine. Well, now's your chance. Just send in the Hall of Fame coupon with your hi-score and a flattering little photo of yourself, and, if the score is high enough, we'll include your picture as well as your name.

ARCADIA

One of the best selling games around from Imagine. You can enter on the Spectrum or Vic versions — but don't forget to tell us which?

ATIC ATAC

A great new graphic adventure-style game from Ultimate.

DIAMONDS

English Software have high hopes for this mining game and are even offering a diamond as a prize! For the Atari owner.

JET-PAC

The game that made Ultimate a top name in the world of games software overnight and which is rapidly becoming a cult game. For the Spectrum and Vic.

KRAZY KONG

The best version of Donkey Kong we've seen for the Vic. From Anirog.

MANIC MINER

Sheer addiction for the Spectrum from the Bug Byte people.

PLANETOID

Acornsoft's brilliant version of Defender for the BBC. At Acornsoft, Neil Raine holds the top score of 408,000 — beat that!

SPLAT

Help Zippy survive in this extremely playable game from new games company Incentive Software.

THE PYRAMID

The Pyramid has Fantasy's unique high score verification system built into the game. Help Zippy beat the nasties. (On The Pyramid, please send your high scores direct to Fantasy at the address on the cassette inlay and NOT to C&VG. Fantasy have their own way to verify scores.)

ZALAGA

Space age action from Ardvark for the BBC.

PROGRAMMERS WANTED

BORING AND UNORIGINAL PROGRAMS

ARE OF NO INTEREST TO US

We produce only top-quality software that offers lasting appeal even to seasoned games players.

So we are looking for experienced freelance machine-code programmers with imaginative ideas of their own or the capability to work from detailed specifications to realise some of the wealth of games ideas that are generated by the **Beyond** team.

If you are fluent in machine-code on the Spectrum, BBC or Commodore 64 and would appreciate generous royalties of 25% of net profits (which could be around £30,000 paid to the author on a top selling game), then drop us a line with name, address and phone number and details of any relevant computing experience.

Send to:

SIMON GOODWIN,
Software Editor,
Beyond Software,
2 St John's Place,
St John's Square
London EC1M 4AX.

International Software House

seeks **HACKERS**

with original programs and ideas. We offer development assistance, loan equipment and high international royalties.

Send sample of details to:

KEITH DEAN,
Box 100,
33 Church Street,
Rickmansworth, Herts.

**Attila the Hun. Ivan the Terrible.
Count Dracula. The Daleks.**

**More evil than all of them
put together.**

Death Star

Three-dimensional terror from **RABBIT SOFTWARE**

RRP £5.99 inc VAT
For CBM 64 & ZX Spectrum 48K

GRAPHICS

By Garry Marshall

MAKING THE MOST OF YOUR 64 PART 3

When you first switch on the Commodore 64, it appears to be a conventional character-based computer. This impression is reinforced by the presence on the keys of graphics characters. It can be great fun to build up images using the graphics characters, even to the extent of using them to 'type' pictures in the same way as a paragraph of text may be typed. But character-based graphics do have their shortcomings. The images that can be created using graphics characters cannot be as detailed and realistic as those of high-resolution graphics, generally speaking.

However, the Commodore 64 can display high-resolution graphics. When it does so, it gives a resolution of 320 by 200 dots, for every dot on its screen is then available. The character-based screen gives 28 rows each with 40 character positions, and the dot matrix for a character is eight rows of eight dots. This means that the high-resolution display provides 200 rows of dots each having 320 dots.

The high-resolution mode is known as the 'bit map' mode on the Commodore 64. It is set by placing a 1 in bit 6 of location 53265 without disturbing any of the other bits in this location. This can be done by:

```
POKE 53265, (PEEK(53265) OR 32)
```

Location 53272 establishes where these two areas of memory are to be found, and POKE 53272, 24 positions the bit map from locations 8192 to 16383 (this is 8k, so that a small amount of it will not be used). It also selects locations 1024 to 2023 for storing the colour information. (In character mode these locations hold the screen's contents.)

In the block of locations controlling the screen colour, each location controls the colour of a block of eight by eight dots. The most significant four bits determine the foreground colour and the least significant four bits the background colour. In this way, to do our plotting in white (colour 1) on a green (colour 5) background, we must put $1 \times 16 + 5 = 21$ in each colour location.

This can be done by:

```
FOR N=1024 TO 2023: POKE N, 21: NEXT N
```

The screen can then be cleared so that it just shows the background colour by:

```
FOR K=8192 TO 16383: POKE K, 0: NEXT K
```

These two loops take some time to complete.

Each location in the memory can store

eight bits (a byte) and so it can control eight dots on the screen. In fact, each byte controls a row of eight dots. The illustration shows the screen divided into rows of eight dots, and indicates the way that the locations in memory correspond to the rows of dots. Within each byte, bit 0 controls the dot at the right of the row and bit 7 the dot at the left.

Thus, to turn on an individual dot, we must find the byte controlling its row, and then find the bit that controls it. If the dot rows are numbered from 0 to 199 and the dot columns from 0 to 319, the dot in column X and row Y can be turned on by:

```
CCOL=INT(X/8)
CROW=INT(Y/8): R=Y-8*CROW
BYTE=8192 + CROW*320 +
      CCOL*8 + R
BIT=X-8*CCOL: BIT=BIT-7
POKE BYTE, 2 BIT
```

This just turns on a single dot, but if any other dots in the row of eight are already on, it will turn them off. The last instruction can be amended to avoid

this if we make it: POKE BYTE, (PEEK (BYTE) OR 2 BIT)

The following program incorporates all these ideas and, by calling a subroutine to plot a single point repeatedly, it draws a line on a screen.

The program is:

```
10 POKE 53265, (PEEK(53265) OR 32)
20 POKE 53272, 24
30 FOR N=1024 TO 2023: POKE N, 21:
  NEXT N
40 FOR K=8192 TO 16383: POKE K, 0:
  NEXT K
100 FOR Y=20 TO 180
110 Y=X
120 GOSUB 1000
130 NEXT X
140 END
1000 CCOL=INT(X/8)
1010 CROW=INT(Y/8): R=Y-8*CROW
1020 BYTE=8192+CROW*320+CCOL*8+R
1030 BIT=X-8*CCOL: BIT=BIT-7
1040 POKE BYTE, (PEEK(BYTE) OR 2*BIT)
1050 RETURN
```

*****TAPE COPIER 5***** (new version)

Makes BACK UP copies of ANY type of SPECTRUM (16-48K) program, (incl. headers), m.c. (unprotected) easily with MANY UNIQUE features.
FULL MONEY BACK GUARANTEE if you are not satisfied.

MAXIMUM 5 STARS from Home Centre. Weekly with 3 out of 4 100% RATINGS.

*LOADS in all program parts CONTINUOUSLY - even without pressing a key. Other copiers require many loadings - MASSIVELY saving you time and trouble.

*M-Drive - GENERALLY copies BASIC, M-CODE + arrays onto MICRODRIVE. Stops programs - VITAL to alter loading instructions to HELP make them run.

*BREAK - at any time, control loading feature.

*MAXBYTES makes a working copy of programs occupying the full 16K or 48K.

*Verifies. Repeat copies. Auto. Abort. Program name plus HEADER data.

*Copies HEADERS/LEADS and other types. Indeed ALL programs that we are aware of!

*Very user friendly and simple to use, with FULL instructions.

*Tape Copier £4.50. Tape Copier with M-Drive £5.50.

Old customers updates at £1.50 or £2 with m-drive + plus SAE and old tape.

CHALLENGING SOFTWARE

Less than human, far more than mere computer

The Psyttron controls the massive Betula 5 Installation. When the attack comes, it will cope with defensive demands which would leave a human brain unheinged, computer circuits scrambled. Damage in any sector of the base must be assessed and its effect on the fabric of the installation calculated immediately. Human lives will be expended as necessary but if the Psyttron ever goes down.

The Sinclair Spectrum has always attracted the best programmers. It's always had the most innovative software: Psion Scrabble, The Hobbit, Jet Pac and now...

PSYTRON

Ten screens of stunning graphics, animation which makes other programmers gasp, a 20 page booklet of hints, tips and help with the discovery of each of six levels of play.

"How long can you survive the Final Conflict? A true Psyttron would last an hour and a Sinclair QL goes to the first person to match that feat."

FOLLOW THE BOOZER'S TRAIL!

We've had *Adventure Quest*, *Dungeon Quest* and *Just Quest*. The quest to end all quests must surely be *Pub Quest* from Dream Software.

This cheeky game has the player in search of money to pay off his debts at the Chequered Flag. The said cash is hidden somewhere in the sewers. Of course, I had to pop in for a quick one before trying in earnest and was somewhat miffed when I tried to buy a pint and was asked "What wiv, buttons?" That is where *Adventure* games differ from strategy games — in the latter, one is always endowed with the wherewithal to start off with.

If you think from the title that this is a game to be played in convivial company with a few well-oiled friends — forget it! You need a clear head! How often does the adventurer use the phrase *LIGHT TORCH?* Just think about it! Now think about it again! Silly, isn't it? Who'd want to set one of those on fire? Well, that's the sort of clear thinking you need for *Pub Quest*!

This is a text adventure and colour is used quite effectively as a code to the type of message being displayed. Response is quite fast and the game is played in real time, the player having the option of one, two or three hours in which to complete his task.

Pub Quest, fun but as hard as the ground under the apple tree, is from Dream Software Ltd, for the Commodore 64 priced £5.95 — and well worth it.

THE PIRATE RETURNS!

"You be forgetful, matey," says the pirate, and sulks off angrily. Of course, I knew what he was after, but I just didn't have any to hand. No, surprisingly enough I hadn't consumed it myself — I'd not found any!

Pirate Adventure, the second in Scott Adam's original series, is generally considered to be the easiest. The 14th and latest takes you back to *Pirate's Island* — but a slightly different and much harder island it is from the one you thought you knew!

THE TEAM

We are here to help you and, hopefully, to help you help other Adventurers in distress. I read all your letters and some I pass on to the rest of the team to deal with. Not being superhuman, I cannot possibly answer all letters AND come up with a column each month!

So here's the team:

PAUL COPPINS — super-Adventurer with an Atari bias. Paul is aged 20, lives in Stanford-le-Hope in Essex and has a full time job. Nearly all his spare time is spent solving the latest *Adventures* and answering your pleas for help. And a very thorough job he does too! The chances are that, if you have a problem with an Atari game, or an Atari query, you will hear from Paul.

SIMON MARSH — a great guy who has a way with Dragons. Simon made his debut on the Radio Sussex computer program recently, talking on that very subject. Simon, aged 17, is a rugger-playing sixth-former from New Malden in Surrey, and has ways and means of getting his mates to divulge their *Adventure* secrets if he doesn't know the answers himself! If your

reply is from Simon, you may have to excuse his handwriting. The chances are that he has had yet another rugby accident. They always seem to affect his hand or wrist...

Simon and Paul are reviewing games in our regular *Adventure Reviews Extra*, and you will be hearing from them again next month. As readers, they have, for over a year, been prolific writers to the Helpline. Now drafted in officially, they represent you, the readers. And if the standards of Paul and Simon are anything to go by — *C&VG* must have the finest readership of any magazine going!

So you can see, there's a great team here waiting to help you! Write to us at Keith Campbell's *Adventure Helpline*, *Computer & Video Games*, Durrant House, 8 Herbal Hill, London EC1R 5EJ. And please — help us to help you! Do make sure you include your full address. We have had letters returned by the Post Office with incomplete addresses and even from demolished houses, so write clearly, please (we're not clairvoyant!), and name the micro on which your are playing. The same game can have a slightly different solution on various micros.

Scott seems these days to delight in dropping *Adventurers* straight in at the deep end. Bruce Banner started off tied hand and foot; *Pirate 2* starts off tied it's too dark to see!

Of course, *Adventurers* have been plunged into darkness unexpectedly before, and experience suggests that there is a lamp, torch or similar device fairly handy — certainly within non-dying range! That was my theory, anyway!

Eventually, the fact I suffer from astigmatism paradoxically helped me to focus on the problem more clearly, and get into the game proper. My wife, who doesn't have the same affliction, was struggling!

BY KEITH CAMPBELL

There are plenty of mysteries to work on, as well as the problems immediately to hand. Why I should want to make glue, especially at some remote place I never heard of! What use will the *Pirate* be this time if I can get him out of his sulk?

Meanwhile, I have found the familiar crack on the hill, and even been inside! Returning is another matter and, at this point, the game has an innovative approach, and a definite link with its forerunner.

Adventure No. 14 is by Scott Adams, and is available from *Adventure International* for a wide range of machines on both disk and tape, some versions with graphics. For options and prices, keep your eye on the ads!

CREDIT WHERE IT'S DUE . . .

The Wizard and Princess rhyme is from Dave Smith of Rainham.

Knight's Quest clues come from the pen of Keith Gibbs.

Thanks to Mark Boddy for *Snowball*, Tim Shelley for *Xenos*, Brian Moore for *Deathmaze*, and the rest come from us!

calculator room — turn in one direction five times, the other four times and the first one three times. And don't forget to take the *SNOWBALL*. Don't waste time pushing too many buttons. Remember the Woodoo Castle lines about making a stand around the coffin. Get up there quickly and you're safe for a bit!
WIZARD & PRINCESS: With the bird? Rub the ring, do to frogs the plainly thing!
BLADE OF BLACKFOOLE: Plants are paid visits in the spring, by something which has a sting, find the jewel bring light to a dark place. The quicksand is thick — try — well, there's a useless lump, *WOODOO CASTLE*. The game's not in the bag until you've cracked it. So wave goodbye to your problems!
KNIGHT'S QUEST: The impassable Giant has Dragonophobia. If in the desert you are stuck, with no place to go, you're out of luck. Different directions you must walk, until you're drowning in the water. If you think it is too late, look hard at the Symbols and translate.
XENOS: The safe can be blown up by putting the dynamite in a bottle and closing it. You have two moves to drop it and run. Try if you will, but — the safe is a red-herring!!! *SPHINX*: To pass the everglades, feed the croci! You must use magic to return.

GUIDE FOR BILBO

I have always found that *The Hobbit* stands alone above all other adventures, in the degree of difficulty I have answering readers letters for help. Despite having a check list of many tips, I find myself struggling to answer some of the questions I receive. Other adventures have a set answer to a given problem — *Hobbit* problems have different solutions according to the circumstances of the game.

Hobbit players will be delighted, then, to hear that there is now a book available to help them in their quest. A Guide to Playing *The Hobbit*, by David Elkan, takes the *Hobbit* player through the adventure at three different levels.

The first part of the book, entitled *Through the Green Door*, explains English Language, gives advice on collecting treasures and describes doors and passageways, and the characters encountered in the game. There are also tips on mapping and scoring.

Part two is a *Hobbit* Helpline and divides the game up into seven sections, such as *The Goblins' Caves* and *The Elven King's Halls*. Each section is introduced with a general discussion on tactics and objectives, followed by a

number of tips categorised as *HELP*, *HINT*, *FURTHER HINT* and *EXTRA HINT*. The last two levels of hint are written in a simple code and give fairly direct clues. The aim of the section is not to give a solution, but to help the reader help himself through the game.

The final part of the book goes through the game location by location (there are 50 in all), with a detailed commentary on what to do, what might happen and how the player should proceed. By following this section, the player should no doubt be able to complete the game without too much difficulty.

Having perused the book very thoroughly, I decided to put it to the test, and what better way to use it, rather than take me through the game, but to answer some of the varied *Hobbit* problems of writers to the *Adventure Helpline*?

The exercise proved invaluable, allowing me to give far clearer answers very quickly. Although not overlong — some 60 pages in all — the book is logically arranged, written in a clear, easy to follow style and, being the perfect companion to the game, should belong on the bookshelves of all *Hobbit* players.

A Guide to Playing *The Hobbit*, by David Elkan, is published by Melbourne House at the modest price of £3.95.

THE REPLY . . .

The following *Colossal* clues come in verse from Geoffrey Redburn, in answer to the Bumpkin's Lament:

Y2 carved upon a rock,
 Leads you to a metal block,
 Pyramid-shaped and platinum bound,

A magic word just must be found.
 The rug, though seemingly should fly,

Is a red herring — just you try!
 Its use is points for final score,
 To get you through repository door.

I've played the mainframe in the sky,

For weary months and months sat I.

That final room where dwarfs

abound,
 And snakes in pits lie coiled around.

Be wary in this deadly place
 Lest you explode without a trace.
 Colossal caves now in the past,
 Were swapped for 'ventures with new cast'.

Now I suffer stings and bites,
 Avoiding insects wanting fights.
 The Temple of Apschai can kill,
 You'll find me there with Strider still.

Where is the magic armour found,
 Inlaid with Mithril, metal bound?

I've been on levels where, it's said,
 A wraith's cold breath will freeze you dead.

But still I search in vain, it seems,
 For Mithril armour. Merely dreams!

NEVER MIND THE QUALITY...

Your company, Geographica, is working on a project to produce Mappamundi, which students of pidgin Latin will quickly translate as 'Map of the World'. But this one is to be different — it is to be computerised and to include other scenarios.

Suddenly, something inexplicable happens, and world travel is brought to a halt — even driving home from work becomes difficult. The world map has changed. Millions of people mysteriously disappear, including your wife.

Thus reads the short science fiction story, *Width of the World* by Ian Watson, which forms part of a new package from Mosaic Publishing. Mosaic specialises in 'Bookware' — complementary book and software — and an *Adventure* game of the same name by Simon Gould accompanies the book.

Playing *Width of the World* after reading the story offers the adventure

player the chance of making it all end happily ever after, for the game takes up the theme where the story ends.

The setting of the events is an unusual one for science fiction — right in the heart of rural England between Forby and Launcester. You start by your bungalow at Ferrier Malvis, and the game takes you into the surrounding countryside, where you may visit the village shops, your small pottery works and your old office at Geographica.

There are various side puzzles to be solved on your way to solving the game itself which is enhanced with graphics. I say enhanced, because, being a bit of a purist, I am not usually too keen on graphics in an *Adventure* — all too often the repetition of pictures slows down the game and leaves little to the imagination. But in *Width*, the graphics are limited to just a few locations, and display, unless requested otherwise, appears only on the player's first visit. There is just enough to make a light break from the text every now and

again, and to provide a little variety.

The game is written in Basic, but the Spectrum's response is quite fast. The output/input mode is a little unusual, in that the computer's reply is quickly displayed, and input is inhibited during a pause for reading.

I left *Width* feeling that here is a game that is not mind-bendingly difficult, but certainly not a dead give-away. It is a light-hearted excursion, with a humorous disposition.

For example, I had to fix a revolving door before I could enter a building. On being successful I was told: "You didn't know you could mend revolving doors, did you?" In the true spirit of *Adventure*, the player can have the satisfaction of achieving things which in real life might be totally beyond his capabilities!

Width of the World includes the short story and *Adventure* game for the 48k Spectrum. Published by Mosaic, it is a new release available through John Wiley at £9.95.

PRICKLY PROBLEMS

Dave Watson and Paul Wood of Gloucester have come up against it in *Countdown to Doom*. They have encountered a six-headed, 600-toothed monster which is preventing them from collecting Dillithium Crystals. And they can't catch the suicidal blob with the net, without being burnt to toast by the sun. "We're not always this bad at *Adventures*," they write. Can anyone help?

Ian Greener from Hereford reckons he has all the PD treasures. How, he asks, do I get more than 236 points?

S. White of Fife needs a rope to help him scale the cliff in *Goblin Towers* and he has a grating problem.

Now for *Aztec Tomb*, in which A. Pike of Havant can't cross the stream. He is trying to make a bridge out of wood, but has come to the point of thinking there might

be a bug in the program.

And another thing. How do you rescue the princess in *Rescue from Castle Dread*?

Old Father Time has featured in the pleas for the first time. This is a BBC adventure, which is puzzling Patrick Greer. Try as he might, he can't help the poor caged wail suspended from the ceiling. Is he wasting his time, chaps? Every time he picks up the hour glass, an exit is revealed and the sands of time promptly run out. "A fantastic adventure has been turned sour for me," he writes. Can anyone help sweeten it a bit for him? Meanwhile, Mark Harwood, aged 14, who describes himself as a very inexperienced adventurer, is stuck between a mine and a small cylindrical room. Whenever he tries to descend into the mine he gets killed.

Ultima II features for the first time in the mailbag. Ian Jess, of Co. Derry, asks if there are any more planets than the nine we know and

Planet X. These are certainly the only ones Paul, our Atari adventure fiend, has come across so far. But who knows — he is still playing the game, and will be reporting back on what he finds in a future issue.

Neil Roberts of Worsley, Manchester is confronted by two locked doors and an unhelpful guard in *Arrow of Death Part 2*. He has turned the wheel to no avail.

Can anyone help Michael Giles stuck in a fire room in Norwich? The Incas have put a curse on him! Jon Moseley of East Ham complains he has only achieved 800 points in *Snowball*! Is that all, Jon? Shame on you! Can anyone get him past the Waldroid guarding Jacob's Ladder?

Spencer Bowden of Penge has given up playing *Black Crystal*. Every time he moves somewhere, he gets killed. He's read the instructions to use keys 5 to 8 to move around, but has now turned to *Hobbit*.

THE ORACLE'S CAVE

The Oracle's Cave is an exciting adventure game containing a unique blend of **HIGH RESOLUTION ANIMATED GRAPHICS** and text which has been designed especially for the

48K SPECTRUM

Its many features include:

- Continuously displayed high resolution graphics
- Time limit of five 'days' on every adventure
- Completely new cave layout, monster position and event sequence generated for every game
- All monsters, articles and locations depicted to a level of detail that pushes SPECTRUM graphics to the limit

The closest yet to a true animated graphics adventure...excellent value for money! *Popular Computing Weekly*
Superb high resolution with smooth scrolling...with the nights drawing in this program should give you plenty to think about! *Micro Adventure Dec 83*
The graphics are smooth, startling and exciting. They show the way for the development of the graphics adventure in the next year. *Sinclair User Annual 84*
Each quest is selected by you at the beginning of the game and you will have five game days in which to complete it. The time factor is exceptional in adventure games. *Sinclair User Dec 83*

Available from W. H. SMITH, selected branches of
BOOTS, and J. MENZIES and other leading retailers or on
direct from:

C&VG's PACKAGE HOLIDAY!

Bored with the beach at Blackpool? Sick of greasy Spanish hotel food? Fed up with foreigners who don't know a computer game from a rancid kebab? If you can answer YES to all these questions and want to do something REALLY different this summer, then you just can't afford to miss the next issue of *Computer and Video Games*.

Yes, C&VG is the only magazine able to solve your holiday problems. The winner of our July issue's grand Olympic Competition will be whisked away on C&VG's magic carpet for a 10-day wonder holiday at the Los Angeles Olympics — all expenses paid! There will be tickets for the top track and field events too — and Disneyland is just a short car ride away if you fancy a break from the sporting action in the main Olympic stadium.

The winner will stay in one of California's top hotels — the Sheraton at Anaheim — which has 500 deluxe rooms, a swimming pool, a coffee shop and live entertainment every night. And the Pacific Ocean is just down the road! What more could you ask for?

A copy of the July issue of C&VG, perhaps, so you can enter this great competition.

The C&VG team are at this very moment making up false names so that they can enter — but, don't worry, we've got Screaming Foul-Up watching over the tickets!

Your passport to this dream holiday is the July issue of *Computer and Video Games* — the magazine you just can't afford to miss. So don't forget to look out for the PiMan on the cover!

THE PI-MAN'S GREATEST CHALLENGE

The poor old PiMan has faced a lot of tough challenges in his time. He's been Pi-Eyed, Pi-Balled and has even suffered from Pi-Mania! Despite this, the PiMan is ready to face his toughest challenge yet — the Pi-Olympics.

Those Pi-maniacs at Automata have written us a very special and very exclusive PiMan game and we'll be presenting it in our July issue just for you.

You won't find the PiMan anywhere else in July — he's taken up residence in the C&VG offices and can be seen jogging around Herbal Hill as day dawns in a frantic bid to get fit and ready to meet any challenge the Automata crew decide to throw at him.

Meanwhile, we advise you to look out your tracksuit and running shoes and follow the PiMan's example. You'll need to be pretty fit to take part in the C&VG Olympic challenge!

We've already seen the game that the Automata programmers have dreamt up for us — and it's a winner! But we're keeping quiet about just what the PiMan is up to in C&VG's very own Pi-Olympics game. You'll just have to get the next issue to find out what it's all about.

To my newsagent: Please deliver/ reserve me a copy of *Computer and Video Games* every month. Price 85p.

Name

Address

EXTRA ADDED INGREDIENTS

Have we got games listings? You bet we've got games listings! Next issue will feature one of our now legendary Book of Games supplements — much loved by everyone who has managed to pick one up in the past. It will be jam-packed with great games listings for all the top micros — including the Spectrum, BBC, Commodore 64, Oric, Dragon, Texas, Atari, Sharp and many others too numerous to mention. Demand for the next issue of *Computer and Video Games* is bound to be massive — so why not nip down to your newsagent and put your order in today? That way you won't miss out. There will be a special Book of Games competition with a major prize to go for. As yet we haven't quite decided what the prize is going to be, but in the best traditions of *Computer and Video Games* it will be big, and very different. A bit like the Bughunter really! Yet another good reason NOT to miss the July issue of *Computer and Video Games*.

CARTOON COMPETITION

When we launched our cartoon contest back in April, little did we know how many of you are budding artists. The response to our request for computer cartoons was absolutely amazing and right now our

team of expert artists are wading through the entries. We'd like to thank everyone who has entered for all the time and trouble they've put into their work. Watch out for the July issue of C&VG to find out if you've won!

48K SPECTRUM

re

HERE'S SEVEN MORE REASONS FOR MAKING MICROSTYLE NO.1

Microstyle Disk Drive Option 1. Single drive

Microstyle 'Options' – A system of disk drives designed to be flexible, cost conscious and practical. If you're after a single drive choose 'OPTION 1': 100K 5 1/4" Single Slimline disk drive. Uses BBC power supply. Includes 'utilities disk', all leads and manual.

£185.00
+ £6.00 securitor del'y

Microstyle Disk Drive Option 2. Single drive in dual case

Choose 'OPTION 2' now and allow yourself the flexibility to add a second drive later: specification as Option 1, mounted in dual case.

£245.00 + £6.00 securitor del'y

3 Spectravision Quickshot Joystick

At last a quality joystick for use with your BBC (model B only) Operating directly through the existing user-port on your BBC model B and available for use with most Acornsoft and many other keyboard controlled games – even Planetoids – these joysticks include a machine-code 'driver program on tape, which converts to remote control operation.

£19.95
+ 75p p&p

NB: Planetoids and certain other games may still require the use of some keyboard commands.

4 Microstyle Plinth

Top value strong, safe metal plinth for your monitor, disk drive, etc.

£14.95 + £2.50 p&p

MICROSTYLE YOUR NO.1 FOR CHOICE, VALUE & SERVICE

5 Nordmende Monitor

The NORDMENDE 14" colour monitor combines true RGB performance with U.H.F. T.V. value. Fully BBC compatible, this dual purpose design compares favourably with most quality, stand-alone RGB monitors while offering far greater value to the whole family.

R.G.B. Cables
extra-please state
Commodore 64/BBC
£7.50

£249.00
+ £6.00 securitor del'y

6 BBC Advanced User Guide

An essential supplement to the 'User Guide' provided with the BBC micro. Some of the many areas covered are: The BASIC assembler/A full 6502 code ref. section/Complete description of ALL the 'FX - OSBYTE calls/Implementing paged ROM software and much more.

£12.95
+ 50p p&p

7 Telemod 2

By connecting your microcomputer to the telephone network, Telemod 2 gives you instant access to viewdata services such as Micronet 800, Prestel, and Homelink. Get the latest news, weather, travel information, and many other topics of immediate interest. Take advantage of homebanking, teleshoping, CitiService financial information, and a wide variety of direct – booking services.

Viewdata and Communications Software Packages. These are required in addition to Telemod 2 to allow you to connect your microcomputer to viewdata services such as Micronet 800 and Prestel. They contain appropriate hardware interfaces, specially developed software, any necessary connectors and full instructions.

£99.00 + £2.50 p&p

(Price includes leads & driver cassette, ROM version please add £5.00 extra.)

Blue Thunder

by Richard Wilcox
in conjunction with
Paramount Software

After skillfully piloting your Jetcopter through a bombardment of Electronic Storms, Ground & Sea Based Missiles and attack from Armoured Barrage Balloons, you thought you were safe to complete your mission ... But No! ... yet another wave of deadly Jet Fighters appear from nowhere with only one objective...to eliminate you!

Only your Hyper-Phase Lasers and amazing arcade skill can keep you alive to complete a task that looks impossible. As the only survivor of a once mighty invasion force you must penetrate deep beyond enemy lines. From a remote island protected by a complex defensive screen you must rescue your wounded comrades held captive beside an unstable nuclear reactor, which you must first destroy!

The ultimate in 100% Machine Code Arcade Games from a Master Programmer, achieving a new peak in programming perfection and super smooth movement, Blue Thunder sets astounding new standards in Hi-Res Graphics with Pixel Scrolling over 8 screens, 5 different missions, Hi-Score and incredible breathtaking PERSPECTIVE GRAPHICS!

Richard Wilcox Software carries a lifetime guarantee, should any of our games fail to load please return them for an immediate replacement.

All Richard Wilcox Software is available from leading software outlets or by completing the attached coupon.
